KPTI Company Overview

Established in April 2014, KPTI unifies two of the world's leading cutting tool manufacturers, Kyocera Tycom Corporation (KTC) and the Cutting Tool Division of Kyocera Industrial Ceramics Corporation (KICC-CT).

The new company creates a combined enterprise that optimizes the strengths of both organizations and facilitates expansion of Kyocera's overall cutting tool-related business in North America. The new combined entity will unify cutting tool resources to create greater efficiencies while positioning the new organization for continued success.

Customers will benefit from a unified sales and support team offering improved customer service and an expanded portfolio of cutting tool products and solutions for the automotive, aerospace, general machining, medical, power generation, printed circuit board and steel markets.

KPTI North American Operations

Costa Mesa, CA

Administration & Manufacturing

- Administration & Accounting Center
- Micro Tools & Round Tools Manufacturing
- Printed Circuit Board Drill Manufacturing
- Micro Tools & PCB Sales & Customer Service Center

Wapakoneta, OH

Steel Tool Holder Manufacturing

- Indexable Drills
- Milling End Mills & Face Mills
- Boring Bars
- Turning and Grooving Holders
- API Ring Groovers

Hendersonville, NC

KPTI North American HQ

- Indexable Insert Manufacturing
- North American Tech Center
- North American Sales, Marketing & Customer Service Center

KPTI Manufactured Products

Steel Toolholders for Milling, Turning, Grooving, Threading and Drilling Metal

Indexable metal cutting inserts made of carbide, ceramic, cermet, Cubic Boron Nitride, and Polycrystaline diamond

Solid carbide cutting tools for tight tolerance and micro-diameter metal cutting applications

KPTI Markets Served

Automotive

Aerospace

Medical

Printed Circuit Board

Power Generation

How to Order

Kyocera Precision Tools' products are sold exclusively through our North American line of authorized distributors.

Locate a Distributor

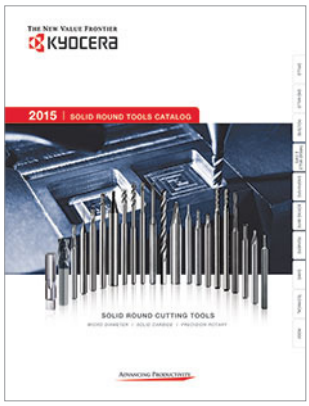
Use our ***Locate a Distributor*** map at:
www.KyoceraPrecisionTools.com/locate

OR

CUSTOMER SERVICE
1.800.823.7284
(OPTION 1)
Monday - Friday
5:00AM - 4:30PM (PST)
8:00AM - 7:30PM (EST)

Using the Kyocera Product Catalogs

All standard Kyocera Precision Tools Products are located in one of these four General Catalogs.



Stock Status Symbols

- ● Indicates that an item is **Stock Standard** and available at our North American Headquarters in North Carolina. Stock Standard items will ship the same day if ordered by 4:30pm (EST).
- ○ Indicates that an item is a World Express and available at our Worldwide Headquarters in Japan. Please allow 7-10 business days for World Express items to arrive.

*All Stock Standard and World Express items are subject to availability.

Authorized Distributor Ordering Guide

TO PLACE ORDERS ONLINE VISIT - http://mykpti.kyocera.com
In addition to placing orders, the MyKPTI distributor website allows you to view real-time product availability, check pricing, view and download product and promotional literature, watch product training videos, and more.

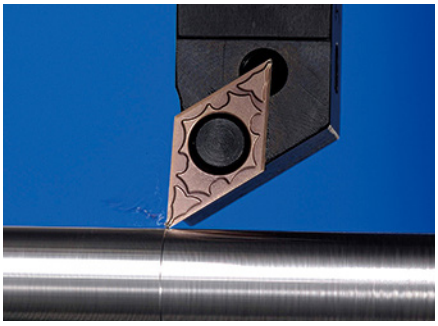
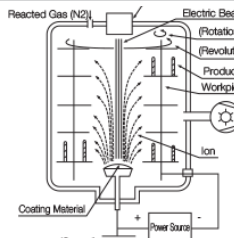
PVD COATED CARBIDE FOR TURNING

PVD COATED CARBIDE (MEGACOAT / MEGACOAT NANO)

KYOCERA's PVD coated carbides for milling and drilling utilize very tough carbide substrates. The low processing temperature, compared with CVD, leads to improved bending strength, less deterioration of the coating and superior tool life with stable machining.



PVD (Physical Vapor Deposition)



Features
① No Deterioration
② No Loss of Bending Strength
③ Excellent Chipping Resistance

Processing Temperature: 400° ~ 600°C

FEATURES OF PVD COATED CARBIDE FOR TURNING

Material	Description	Color	Main Component (Coating Composition)	Advantages
P Steel	**PR915** (Super Micro-Grain)	Bluish Violet	TiAlN	· TiAlN base PVD coated super micro-grain carbide, superior wear and oxidation resistance · Application: Stable and reliable high precision cutting of steel
	PR930 (Super Micro-Grain)	Reddish Gray	TiCN	· Hard TiCN base PVD coated super micro-grain carbide · Application: Low cutting speed, precise cutting with sharp edge
	PR1005	Reddish Gray	TiCN	· TiCN base PVD coated hard micro-grain carbide · Application: Turning of free-cutting steel, long tool life achieved through anti-adhesion performance
	PR1025	Reddish Gray	TiCN	· TiCN base PVD coated micro-grain carbide · Application: General purpose cutting of steel and stainless steel, stable and long tool life
	PR1115	Purple Red	TiAlN	· Hard TiAlN base PVD coated super micro-grain carbide · Application: Superior anti-oxidation performance with well balanced wear resistance and toughness
	PR1215	Blackish Red	MEGACOAT	· Superior wear and oxidation-resistant MEGACOAT on micro-grain carbide substrate · Application: Superior adhesion-resistant and long tool life for steel and stainless steel cutting
	PR1425	Blackish Red	MEGACOAT NANO	· Nano thin multi-layer coating performs with superior wear resistance and high oxidation resistance. · Application: various applications of steel cutting, High speed stainless steel cutting, extended tool life
M Stainless Steel	**PR1125**	Purple Red	TiAlN	· Hard TiAlN base PVD coated super micro-grain carbide, superior toughness and heat resistance · Application: Finishing and light interrupted cutting of stainless steel
	PR1225	Blackish Red	MEGACOAT	· Superior wear and oxidation resistant MEGACOAT on micro grain carbide substrate · Application: Light interrupted to interrupted cutting of stainless steel
K Cast Iron	**PR905**	Bluish Violet	TiAlN	· Smooth fine surface PVD coated hard carbide with plastic deformation resistance · Application: Suitable for milling of gray and nodular cast iron
S Heat-Resistant Alloys	**PR1305**	Blackish Red	MEGACOAT	· MEGACOAT on hard and superior heat resistant carbide, superior wear resistance · Application: Finishing of heat-resistant alloys
	PR1310	Blackish Red	MEGACOAT	· MEGACOAT on hard and superior heat resistant carbide, superior wear and oxidation resistance · Application: First choice for continuous and light interrupted cutting and finishing of heat-resistant alloys
	PR1325	Blackish Red	MEGACOAT	· MEGACOAT on tough carbide · Application: Light interrupted cutting and roughing of heat-resistant alloys
	PR1535	Blackish Red	MEGACOAT NANO	· Stabilized turning operations and long tool life with MEGACOAT NANO coating technology · Application: PVD for titanium alloy and precipitation hardened stainless steel

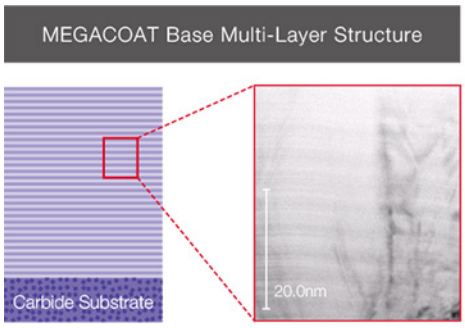
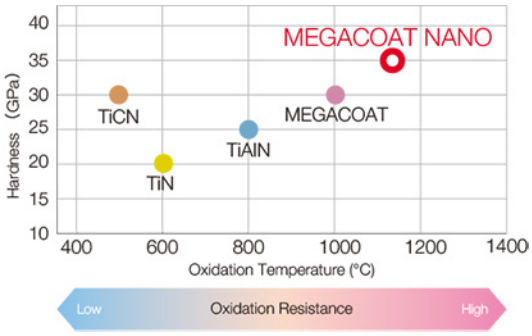
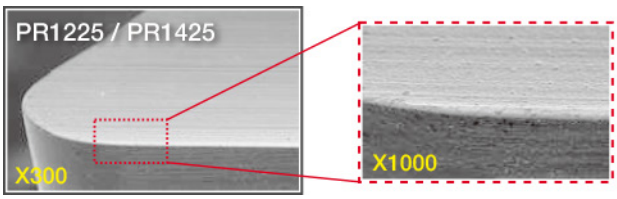
MEGACOAT NANO PR1425 (Grade Properties)



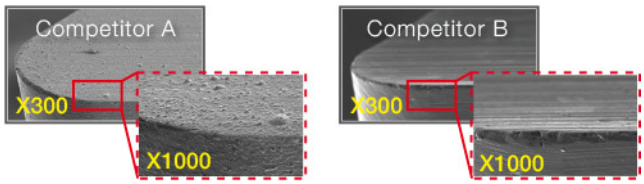


Prevents wear and fracture with high hardness (35GPa) and superior oxidation resistance (oxidation temperature: 1,150°C)

Cutting Edge Quality (Sharp Edge Insert)



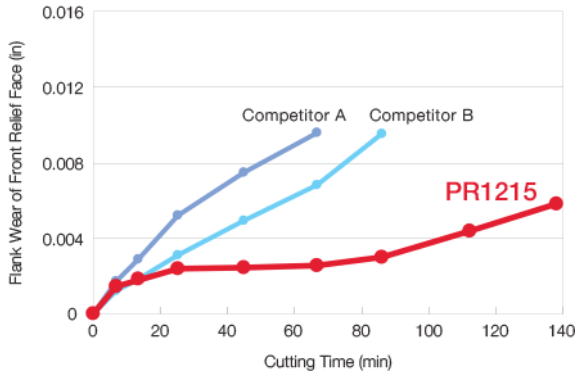
Superior edge-sharpening performance and smooth surface



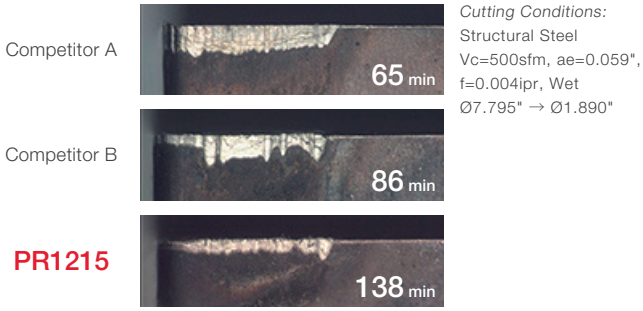
Delamination (coating peeling) and rough surface

MEGACOAT Series (PR1225/PR1425) - high edge sharpening performance and adhesion resistance.

PR1215 Wear Resistance Comparison
(Off-Centered Grooving)



Flank Wear of Front Relief Face



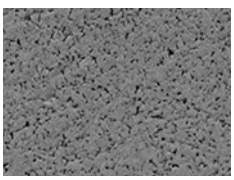
Cutting Conditions:
Structural Steel
Vc=500sfm, ae=0.059",
f=0.004ipr, Wet
Ø7.795" → Ø1.890"

PR13-Series Advantages

Superior wear and fracture resistance attained with uniform grain size and MEGACOAT on superior thermal shock resistant carbide

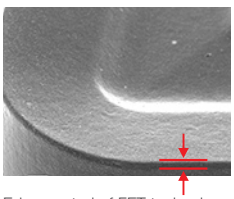
New edge preparation technology (FET: Fine Edge Treatment) controls and minimizes R horning and realizes large tip rake angle, and thus prevents burrs and notching. It provides good finished surface

Special Carbide Substrate



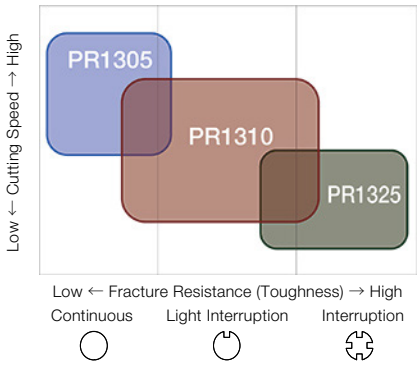
Uniform grain size enables superior thermal shock resistance and constant hardness

New Edge Preparation Technology

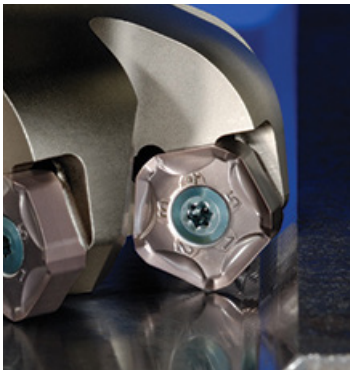


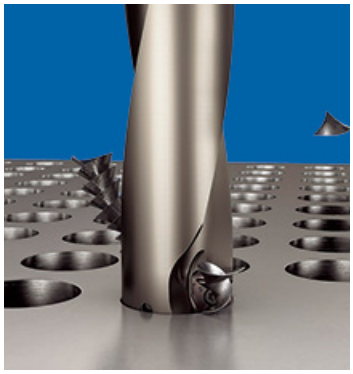
Edge control of FET technology (FET: Fine Edge Treatment)

Heat-Resistant Alloys (Ni-based)



PVD & CVD COATED CARBIDE FOR MILLING & DRILLING





MEGACOAT / MEGACOAT NANO

KYOCERA's PVD coated carbides for milling and drilling utilize very tough carbide substrates.

The low processing temperature, compared with CVD, leads to improved bending strength, less deterioration of the coating and superior tool life with stable machining.

FEATURES OF PVD COATED CARBIDE FOR MILLING & DRILLING

Material	*Description*	*Color*	*Main Component (Coating Composition)*	*Advantages*
P Steel	**PR830**	Gold	TiAlN+TiN	· Improved high temperature stability and wear resistance by TiAlN base PVD coating · Application: Stable and long tool life for milling of steel
	PR1230	Blackish Red	MEGACOAT	· Superior wear and oxidation resistant MEGACOAT on a special tough carbide substrate · Application: Stable and high feed rate milling and drilling of steel
	PR1525	Blackish Red	MEGACOAT NANO	· New coating technology [MEGACOAT NANO] is applied. Nano thin multi-layer coating performs superior wear resistance and high oxidation resistance. · Application: Stable and long tool life milling of Steel and Stainless Steel
M Stainless Steel	**PR1025**	Reddish Gray	TiCN	· TiCN base PVD coated on micro-grain carbide · Application: Stable and long tool life milling of stainless steel
	PR1225	Blackish Red	MEGACOAT	· Superior wear and oxidation-resistant MEGACOAT on micro-grain carbide substrate · Application: General and high feed drilling of steel and stainless steel
K Cast Iron	**PR1210**	Blackish Red	MEGACOAT	· Superior wear and oxidation resistant MEGACOAT on special carbide substrate for cast iron · Application: Highly efficient stable milling and drilling of gray and nodular cast iron and titanium alloys
	PR1510	Blackish Red	MEGACOAT NANO	· New coating technology [MEGACOAT NANO] is applied. Nano thin multi-layer coating performs superior wear resistance and high oxidation resistance. · Application: For gray and nodular cast iron, stable wear resistance and toughness
	CA420M	Blackish Red	MEGACOAT NANO	· New coating technology [MEGACOAT NANO] is applied. Nano thin multi-layer coating performs superior wear resistance and high oxidation resistance. · Application: For gray and nodular cast iron, stable wear resistance and toughness

	CA6535	Gold	TiCN+Al_2O_3+TiN (CVD)	· High heat resistance and wear resistance with CVD coating with improved stability due to thin film coating · Application: CVD for Ni-base heat resistant alloy and martensitic stainless steel

2 New Grades for Extending Tool Life

when machining heat resistant alloys and difficult-to-cut materials

CA6535 (CVD) NEW

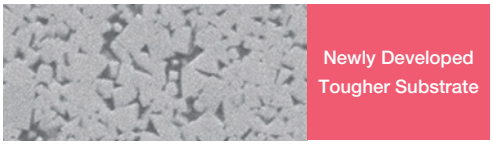
for Ni-base heat resistant alloy and martensitic stainless steel

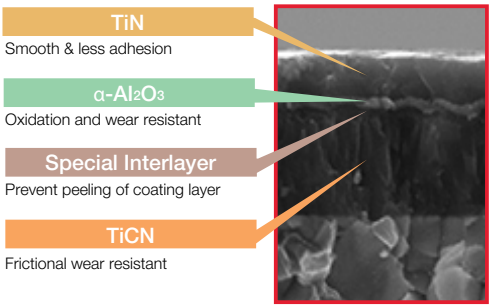
PR1535 (PVD) NEW

for titanium alloy and precipitation hardened stainless steel

New grades for difficult-to-cut material

- Stable cutting prevents insert fracturing
- Good for high efficiency machining





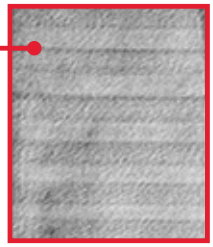
CA6535

Ni-base heat resistant alloy and martensitic stainless steel
ı heat resistance and wear resistance with CVD coating
roved stability due to thin film coating technology

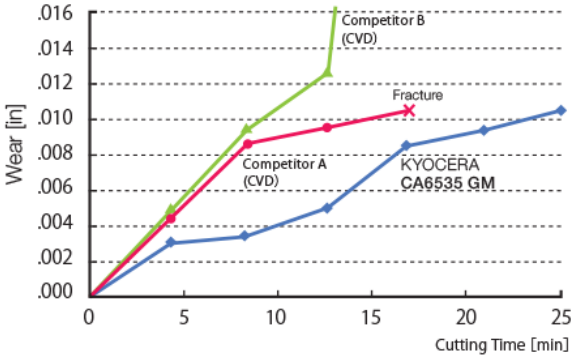
PR1535

titanium alloy and precipitation hardened stainless steel
ɔilized milling operation and long tool life with Kyocera's MEGACOAT NANO coating technology
roved stability due to thin film coating technology

MEGACOAT
Layer structure



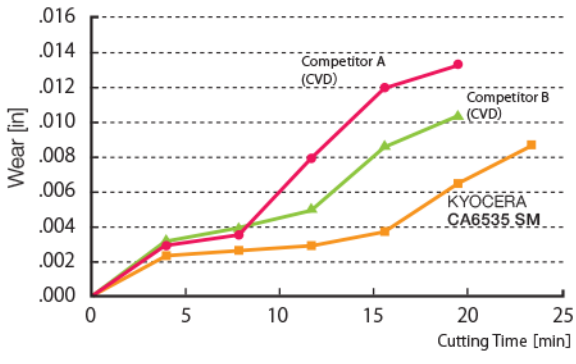
• Ni-base Heat Resistant Alloy



< Cutting Condition > Vc=175sfm, ap=0.039", fz=0.006ipt, WET

1st recommendation GM chipbreaker

• Martensitic Stainless Steel

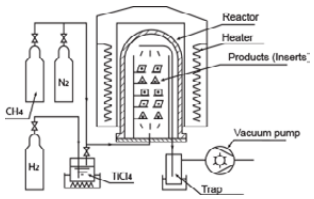


< Cutting Condition > Vc=975sfm, ap=0.079", fz=0.008ipt, WET

1st recommendation SM chipbreaker

CVD COATED CARBIDE

CVD (Chemical Vapor Deposition)



Features
① Equally deposited on face
② Easy application for multilayer deposition
③ Enabling thick coating

Processing Temperature: 900° ~ 1100°C

CVD COATED CARBIDE

KYOCERA's CVD coated carbide grades are based on ceramic thin film technology and provide stable, efficient cutting at high speeds or heavily interrupted applications.

- Applicable from low to high speed cutting and from finishing to roughing
- Stable cutting is achieved due to the superior toughness and crack resistance
- Cutting times are reduced due to good chip control from effective chipbreakers

FEATURES OF CVD COATED CARBIDE

Material	*Description*	*Color*	*Main Component (Coating Composition)*	*Advantages*
P Steel	**CA510**	Gold	Micro Columnar TiCN+Al_2O_3+TiN	· Special substrate with thermal deformation resistance along with a thick and tough film coating for wear resistance · Application: High speed and high efficiency steel machining
	CA515	Gold	Micro Columnar TiCN+Al_2O_3+TiN	· Special substrate and tough coating film provides thermal deformation and high wear resistance · Application: Continuous to light interrupted steel machining (general use)
	CA525	Gold	Micro Columnar TiCN+Al_2O_3+TiN	· Special substrate and tough coating film provides high wear and fracture resistance · Application: 1st choice for steel machining
	CA530	Gold	Micro Columnar TiCN+Al_2O_3+TiN	· Special tough substrate and tough coating film provides high stability and wear resistance · Application: General to heavy interrupted machining (stability oriented)
	CA5505	Gold	Micro Columnar TiCN+Al_2O_3+TiN	· Improved wear resistance due to hard carbide substrate and micro columnar structure of coated composition · Application: High speed continuous cutting of steel, continuous to light interrupted cutting of cast iron
	CA5515	Gold	Micro Columnar TiCN+Al_2O_3+TiN	· Improved wear resistance and longer tool life due to micro columnar structure of coated composition · Application: High speed cutting of steel, continuous to light interruption
	CA5525	Gold	Micro Columnar TiCN+Al_2O_3+TiN	· Improved toughness and wear resistance due to tougher carbide substrate and micro columnar structure of coated composition · Application: First choice for general cutting of steel, roughing to interruption
	CA5535	Gold	Micro Columnar TiCN+Al_2O_3+TiN	· Improved toughness due to tougher carbide substrate · Application: Roughing to heavy interrupted cutting of steel
	CR9025	Gold	Columnar TiCN+TiN	· Improved toughness and stability due to specialized carbide substrate with plastic deformation resistance · Application: Cut-off, grooving and multi-function cutting of steel
M Stainless Steel	**CA6515**	Gold	Micro Columnar TiCN+Al_2O_3+TiN	· Specialized carbide substrate for stainless steel cutting, excellent wear resistance · Application: Continuous to light interrupted cutting of stainless steel
	CA6525	Gold	Micro Columnar TiCN+Al_2O_3+TiN	· Specialized carbide substrate for stainless steel cutting, excellent notching resistance and toughness · Application: First choice for general cutting of stainless steel, from finishing to roughing, continuous to interruption
K Cast Iron	**CA4010**	Gold	Columnar TiCN+Al_2O_3+TiN	· Excellent high temperature stability due to plastic deformation and oxidation wear resistance · Application: Continuous to light interrupted high speed cutting of cast iron
	CA4115	Gold	Micro Columnar TiCN+Al_2O_3+TiN	· Improved wear resistance due to micro columnar structure of coated composition · Application: Nodular cast iron cutting, continuous to light interruption
	CA4120	Gold	Micro Columnar TiCN+Al_2O_3+TiN	· Improved toughness and wear resistance due to tougher carbide substrate and micro columnar structure of coated composition · Application: Roughing to heavy interrupted cutting of nodular cast iron
	CA4505	Blackish gray	Micro Columnar TiCN+Al_2O_3	· Stable, long tool life due to improved bounding force of coated layers and special treatment on the surface of top coated layer · Application: For gray cast iron and nodular cast iron at high speed in continuous to light interrupted cutting
	CA4515	Blackish gray	Micro Columnar TiCN+Al_2O_3	· Stable, long tool life due to improved bounding force of coated layers and special treatment on the surface of top coated layer · Application: First choice for gray cast iron and nodular cast iron in light to heavy interrupted cutting

Special substrate and tough coating film provides high wear and fracture resistance

Application: 1st Choice for steel machining

CA530

Special tough substrate and tough coating film provides high stability and wear resistance

Application: General to heavy interrupted machining (stability oriented)

High Adhesion Strength Coating Layer with Ultra Fine Interface

Long tool life and stable machining with **40%** improved adhesion strength!

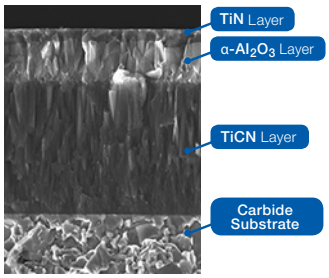
Smooth and Flat Surface Reduces Cutting Forces

Sharp cutting and stable machining with a smooth, flat surface preventing sudden breakage caused by material welding onto the cutting edge

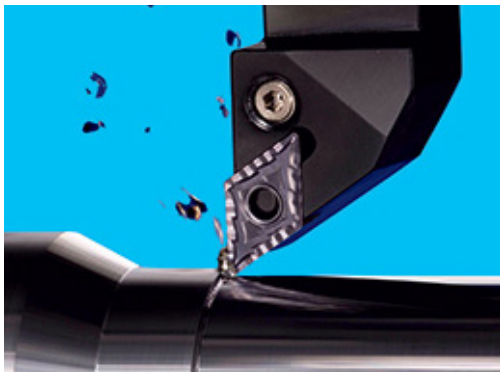
Innovative Coating Layers Produce Superior Hardness and Toughness

Special crystal control technology

Long tool life with the high aspect ratio of α-Al_2O_3 layer



CERMET



CERMET

KYOCERA is known as the leading manufacturer of cermets. Cermet is a composite material combining Ceramic and Metal. Typical materials used in cermets are TiC, TiN, TiCN and NbC. Designed to provide long tool life and excellent surface finishes, cermets combine toughness with superior wear resistance.

PVD COATED CERMET

PVD Coated Cermet is coated on cermet substrate with a thin layer of high wear resistance and high adhesion resistance by PVD (Physical Vapor Deposition) technology. Generally because of the low processing temperature of PVD compared with CVD, PVD Coated Cermet features less deterioration and more bending strength.

FEATURES OF CERMET & PVD COATED CERMET

Material		Description	Color	Main Component (Coating Composition)	Advantages
P Steel	Cermet	**TN620**	Gray	TiCN	· Inner structure has high toughness and chipping resistance along with thermal shock resistance. · Application: Recommended cermet for stable steel machining and high quality surface finish
		TN6010 (Super Micro-Grain)	Gray	TiCN	· Improved surface cermet with superior wear resistance and toughness · Application: Economical uncoated cermet for steel
		TN60	Gray	TiCN+NbC	· Typical choice cermet with superior wear resistance and toughness · Application: Cutting of steel and stainless steel
		TN6020 (Super Micro-Grain)	Gray	TiCN	· Super micro-grain cermet with superior wear resistance and toughness · Application: First choice cermet for steel and stainless steel cutting
		TN100M	Gray	TiCN+NbC	· Tough cermet with improved oxidation resistance and thermal shock resistance · Application: Milling of steel at high speed
		TC40	Gray	TiC+TiN	· Good balance of wear resistance and toughness · Application: Grooving and threading of steel
	PVD	**PV720**	Blackish Red	TiCN (MEGACOAT NANO)	· MEGACOAT NANO efficient machining with high quality surface finishes and superior wear and adhesion resistance. · Application: Recommended cermet for stable steel machining and high quality surface finish
		PV7010 (Super Micro-Grain)	Blackish Red	TiCN (MEGACOAT)	· Heat-resistant MEGACOAT on improved surface cermet with excellent wear resistance and toughness · Application: Stable and improved tool life in steel cutting, excellent surface finish
		PV7025 (Super Micro-Grain)	Blackish Red	TiCN (MEGACOAT)	· MEGACOAT on the super micro-grain cermet · Application: High strength and long life given by MEGACOAT.
		PV7040	Blackish Red	TiC+TiN (MEGACOAT)	· MEGACOAT on the super micro-grain cermet · Application: High strength and long life given by MEGACOAT.
K Cast Iron		**PV7005**	Blackish Red	TiC+TiN (MEGACOAT)	· Heat-resistant MEGACOAT on cermet with excellent wear resistance · Application: High speed finishing of gray and nodular cast iron

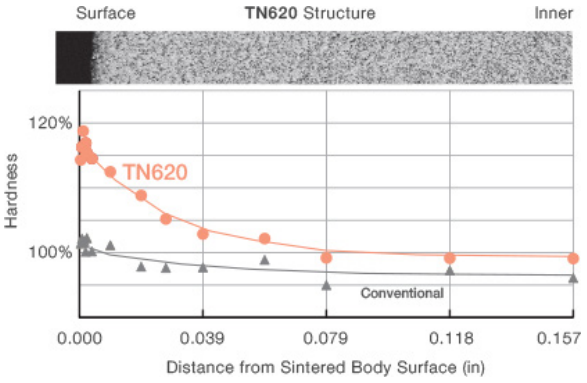
SURFACE HARDENED *"HYBRID STRUCTURE"*

Surface-Hardened Hybrid Structure



Surface Structure
(High Hardness Cermet)
- High wear resistance

Inner Structure
(High Toughness Cermet)
- Chipping and thermal shock resistance

(Internal Evaluation)

TN620's inner structure has high toughness and chipping resistance along with thermal shock resistance. TN620 has a higher hardness and greater wear resistance than that of the conventional micro grain cermet.

EASY TO VIEW CUTTING EDGE WEAR

PV720 improves performance by adopting composite lamination of MEGACOAT NANO and special TiN to combine high adhesion resistance and great visibility of the used cutting edge even in dim light.

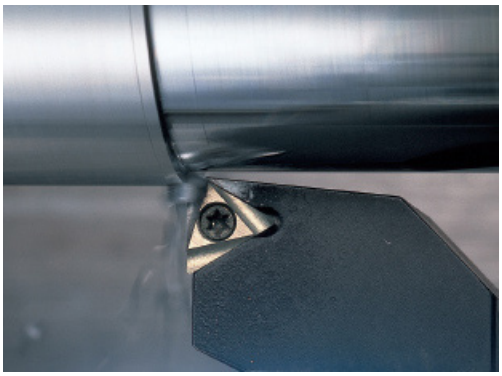
CARBIDE



CARBIDE

Due to its superior mechanical features carbide is used in a variety of applications. KYOCERA produces a variety of carbides, including KW10 for non-ferrous materials and micro-grain carbides for precision cutting.

FEATURES

- Tough and hard
- Good thermal conductivity
- Suitable for cutting non-ferrous metals and non-metals
- Stable cutting at low cutting speeds, including milling operations

FEATURES OF CARBIDE

Material	*Description*	*Color*	*Main Component (Coating Composition)*	*Advantages*

CBN

CBN

KYOCERA CBN is second only to diamond in hardness. CBN (Cubic Boron Nitride) is a synthetically produced material with high thermal conductivity which provides stable cutting.

FEATURES

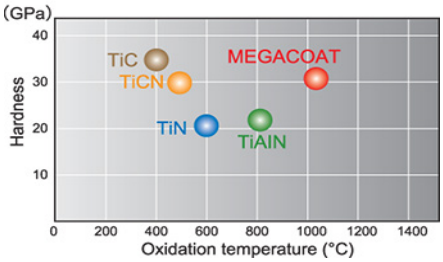
- Superior wear resistance when cutting hardened materials
- Suitable for high speed cutting of cast iron and sintered steel
- High thermal conductivity provides stable cutting

FEATURES OF CBN

Material	Description	Color	Av. Grain Size (μm)	CBN Content Rate (%)	Hardness of Substrate (GPa)	Transverse Strength (MPa)	Advantages
H Hardened Materials	**KBN510**	Black	2	50	28	1,000	· Excellent wear resistance and crack resistance, non-coated CBN · Application: Finishing and continuous cutting of hardened die steel
	KBN525	Black	1 and Under	45	25	1,250	· Good balance of toughness and wear resistance, non-coated CBN · Application: General grade for hardened steel, high stability at high speed and high feed cutting
	KBN05M (MEGACOAT)	Blackish Red	0.5-1.5	55	27	1,000	· Heat-resistant MEGACOAT on highly heat-resistant CBN substrate · Application: High speed finishing of hardened steel
	KBN10M (MEGACOAT)	Blackish Red	2	50	28	1,000	· Heat-resistant MEGACOAT on CBN with hard binder phase, superior anti-crater wear resistance · Application: High speed finishing of hardened die steel
	KBN25M (MEGACOAT)	Blackish Red	1 and Under	45	25	1,250	· Heat-resistant MEGACOAT on micro-grain CBN with heat resistant binder phase · Application: Stable cutting of hardened steel at high speed
	KBN30M (MEGACOAT)	Blackish Red	1-4	65	30	1,350	· Heat-resistant MEGACOAT on tougher CBN · Application: Stable cutting of hardened steel for continuous to interrupted cutting
Sintered Steel	**KBN65B**	Black	2	85	32	1,150	· Excellent wear resistance due to CBN with heat-resistant binder phase, non-coated CBN · Application: Stable cutting of sintered steel (ferrous sintered alloy) at low speed
	KBN65M (MEGACOAT)	Blackish Red	2	85	32	1,150	· Heat-resistant MEGACOAT on CBN with heat-resistant binder phase · Application: Stable cutting of sintered steel (ferrous sintered alloy) at low speed
	KBN70M (MEGACOAT)	Blackish Red	2-4	90	34	1,350	· Heat-resistant MEGACOAT on CBN rich substrate · Application: General cutting of sintered steel (ferrous sintered alloy) at high speed
K Cast Iron	**KBN60M** (MEGACOAT)	Blackish Red	0.5-6	80	33	1,250	· Heat-resistant MEGACOAT on CBN rich substrate with hard binder phase · Application: High speed finishing of gray cast iron
	KBN900 (TiN COAT)	Gold	9	90	31	1,050	· TiN coated solid CBN · Application: Heavy duty, interrupted cutting and finishing of hardened steel, hardened roll steel and cast iron

MEGACOAT CBN

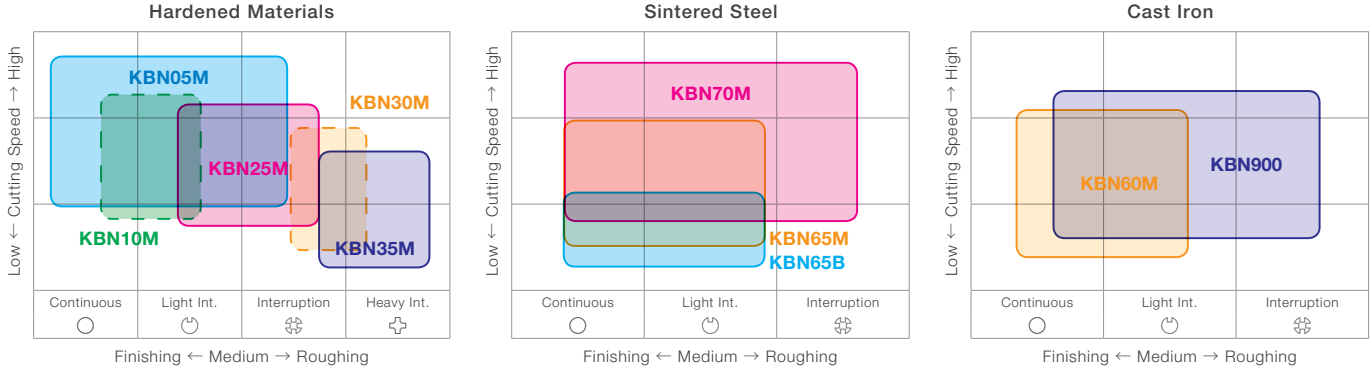
Properties of PVD Coated Layer



Advantages of MEGACOAT

- Long tool life and stable cutting due to superior heat-resistance and hardness
- Improvement of crater wear (oxidation, diffusional wear) resistance
- High thermal stability and surface smoothness provde excellent surface finish

Application Map



PCD

PCD

KYOCERA diamond material is a synthetic diamond sintered under high temperatures and pressures. PCD (Polycrystalline diamond) is ideal for non-ferrous metals and non-metals.

FEATURES

- Applicable for non-ferrous metals, non-metals turning, milling and other various type of cutting
- Long tool life due to extreme hardness
- Capable of high cutting speeds which increases cutting productivity
- Reduced edge build-up allows for high precision cutting
- Diversified applications for cutting of non-ferrous materials and non-metals
- Finished surface will be rainbow colored.
  (a mirror-like finished surface will not be obtained when single crystal diamond is used.)

FEATURES OF PCD

Material	Description	Av. Grain Size (μm)	Advantages
N Non-Ferrous Materials	KPD001	0.5	· Super Micro-Grain PCD features cutting edge strength, wear resistance, fracture resistance, good edge-sharpening performance and long, stable tool life. · Application: High speed cutting of aluminum alloys, brass, non-ferrous metals and non-metals including plastics, fiberglass, carbide and ceramics.
	KPD010	10	· Good wear resistance and toughness, good grindability · Application: General purpose, high speed cutting of aluminum alloys, non-ferrous metals and non-metals including plastics, fiberglass, carbide and ceramics.
	KPD230	2-30	· Superior abrasive wear resistance and toughness due to high density PCD with mixed rough and fine grains · Application: High speed milling of aluminum alloys, non-ferrous metals, plastics and fiberglass

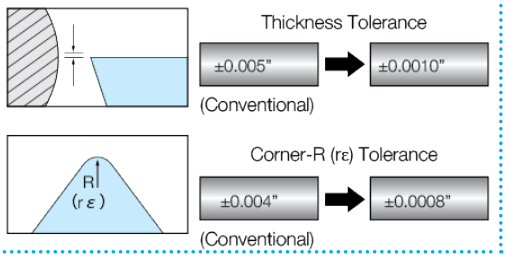
Features of Insert

with tolerance symbol "E" Class

• Same edge position and height after changing inserts



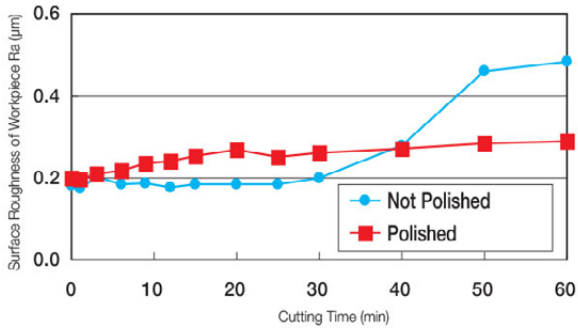
Polish (Insert Rake Face) Effects

1) Improved Smoothness

- Better adhesion resistance due to smooth chip flow.
- Polished inserts achieve high performance especially in stainless steel and aluminum cutting.

2) Polished inserts improve surface smoothness

● Surface Finish Comparison of Workpiece

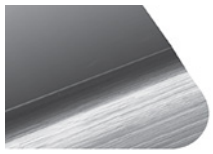


Cutting Condition
Workpiece Material: 304 Steel (Ø6 Bar material)
Vc=175sfm, D.O.C.=0.012, f =0.0012ipr, **Wet**
• DCGT32505MF-GF **(Non-Polished)**
• DCGT32505MFP-GF **(Polished)**

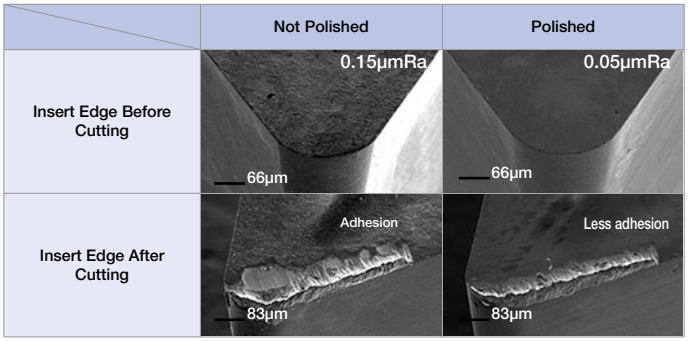
Advantages of "Super Fine"

● **High Quality Ground + "E" Class High Precision (Insert descriptions ending with "SF")**

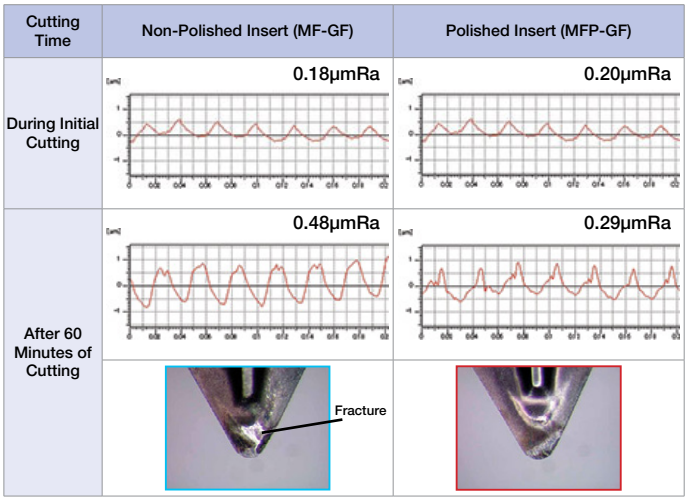
- Reduced micro chipping during edge grounding
- Less adhesion
- Long tool life



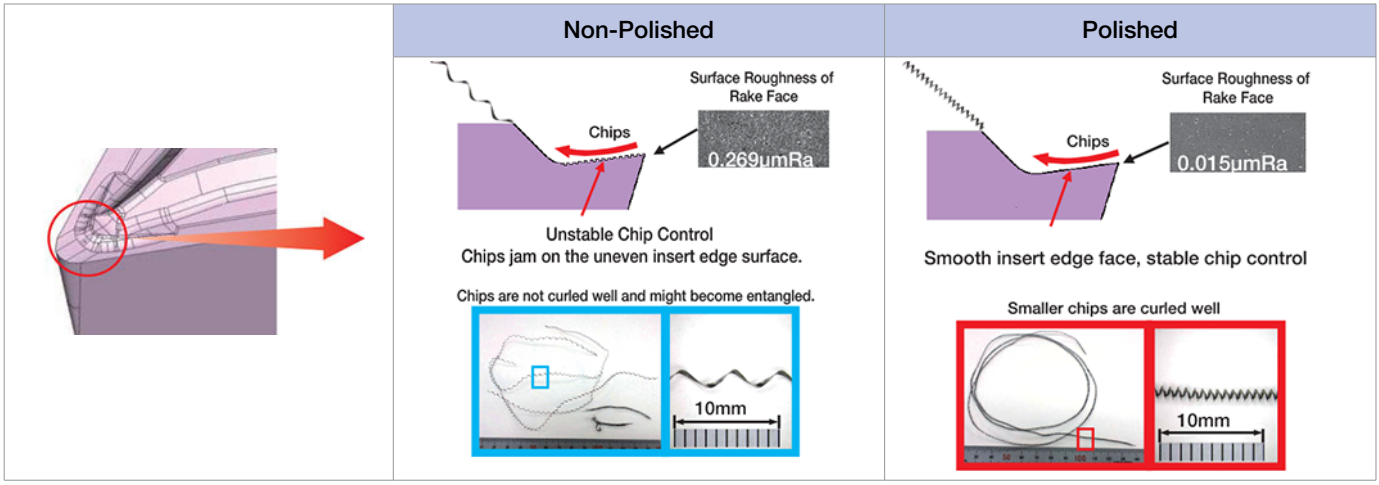
● Surface Finish of Workpiece



● Surface Finish of Workpiece



3) Chip Shape Comparison of Polished Vs. Non-Polished



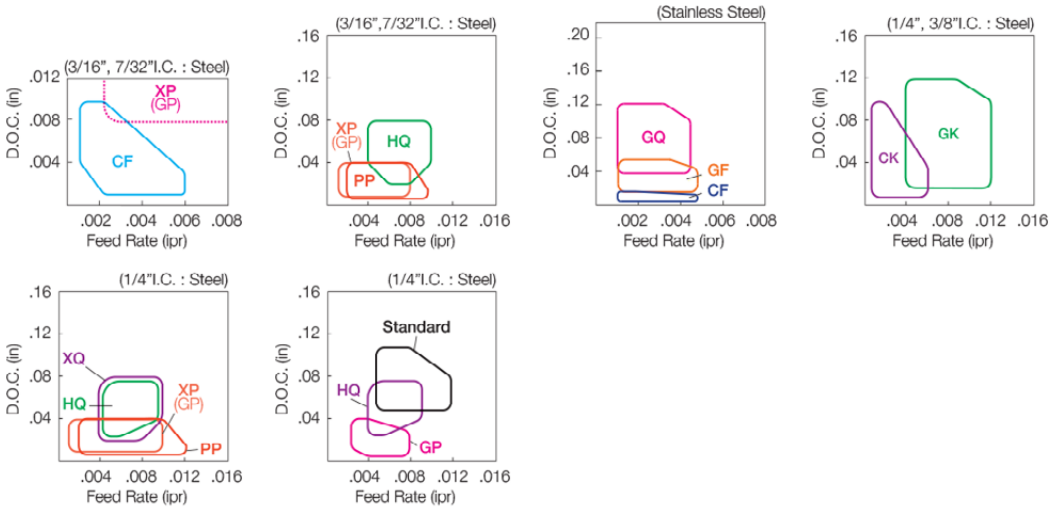
Steel

1 *Molded Chipbreaker*

Minute D.O.C.	CF			Available for minute D.O.C. (0.02 to 0.2mm) finishing.
Finishing	GF			Dot located close to ridge line of cutting edge on corner. Chips fragmented in small pieces in cutting of small D.O.C..
Finishing-Medium	GQ			Enables cutting over a wide range of conditions by using the optimum chipbreaker width according to the cutting depth.
Finishing	CK			Good cutting performance. Applicable without hand for two direction cutting on automatic lathe.
Medium	Standard (without Symbol)			Strong edge chipbreaker for medium cutting range.
Finishing	PP			3-step Smart Dot structure is applicable to a wide range of feed rates in steel finishing. Smooth taper cutting edge reduces cutting forces.

Finishing	GP			Good chip control at finishing. Applicable to sticky material like low carbon steel, pipe material.
Finishing-Medium	GK			Good chip evacuation at wide range by breaker dot and wide chip pocket.
Finishing-Medium	HQ			General purpose chipbreaker for medium cutting.
Finishing	XP			Wide chip control range and sharp cutting performance. Suitable for low carbon steel and sticky material.
Finishing-Medium	XQ			Wide chip control range and sharp cutting performance. Suitable for low carbon steel and sticky material.

Applicable Chipbreaker Range (D.O.C. indicates radial depth per side of the workpiece)



Steel

1 *Ground Chipbreaker - Positive*

Low Feed	J		 	Slant chipbreaker width and chip control at various D.O.C..
Low Feed	U		 	Good chip control at low feed rate and varied D.O.C. with low cutting force. Suitable for automatic lathes.
Finishing	F		 	Good chip control at finishing to light cutting with low cutting force.

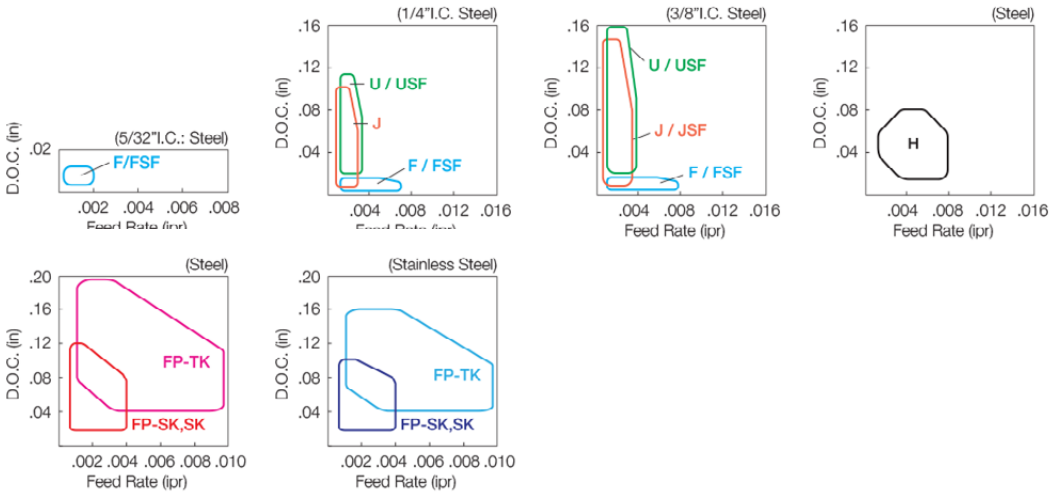
Finishing	Land (Without Indication)		 	Good chip control at finishing to light cutting with low cutting force.
Finishing-Medium	Y		 	Sharp cutting performance and good surface finish.
Finishing-Medium	H		 	Sharp cutting performance and small curled chips.

Steel / Stainless Steel (for Negative Small Parts Machining)

Finishing-Medium	SK	 FP-SK: Mirror Finish -SK: Honing	 	For finishing to medium machining with automatic lathes. Sharp Edge / Polished: Sharp Cutting. Smooth chipbreaker geometry improves chip flow with less adhesion. Large curled chips.

Medium-Roughing	FP -TK		 	For medium to high feed with automatic lathes (when cutting medium to large diameter workpieces). Sharp Edge / Polished: Sharp Cutting. Smooth chipbreaker geometry improves chip flow with less adhesion. Large curled chips.

Applicable Chipbreaker Range (D.O.C. indicates radius)



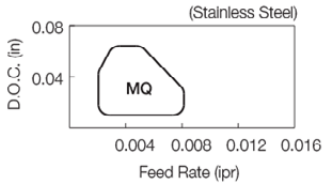
How to Select Chipbreakers

Advantages	Application	Chipbreaker name
Chip control ("G" class / sharp edge)	Minute Depths of Cut	CF
	Small Depths of Cut	GF
	Medium to high feed	GQ
High precision (Ground Chipbreaker)	Small diameter parts with less rigidity	U (USF)
	Improved chip control in various Depths of Cut	J (JSF)
	Finishing	F (FSF), Lead (Without Symbol)
Sub Chipbreaker	Lower cutting resistance, improved adhesion resistance	CK

Stainless Steel

Finishing	MQ	 	Good chip evacuation at internal turning. Small curled chips. Prevents chip entanglement with toolholder and stabilizes surface roughness.

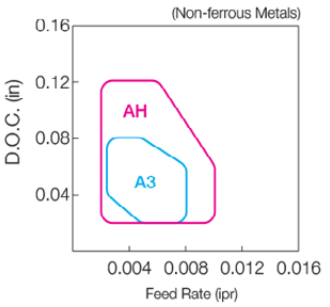
Applicable Chipbreaker Range (D.O.C. indicates radius)



Aluminum & Non-ferrous Metals

Finishing-Medium	AH	 	Positive chip groove and good chip control with low cutting forces. Polished surface reduces adhesion.
Finishing-Medium	A3	 	Large rake angle, smooth chip flow and less adhesion. Sharp edge and good surface finish.

Applicable Chipbreaker Range (D.O.C. indicates radius)



AH Chipbreaker

• Insert whose corner R(rε) dimension expressed with less than sign (e.g. **<0.002, <0.004, <0.008** etc.) indicate models with minus tolerance for corner R (rε).

● Double-Sided Small Tool Identification System

CNGU070301M F P - SK

- Corner-R(rε) for Minus Tolerance
- Sharp Edge
- Insert Surface Polished Inserts
- Chipbreakers

CNGU070301M F R - U

- Corner-R(rε) for Minus Tolerance
- Sharp Edge
- Insert Hand
- Chipbreakers

CNGU070301M E R - U

- Corner-R(rε) for Minus Tolerance
- Honed Edge
- Insert Hand
- Chipbreakers

● When minus tolerance is specified for corner-R (rε)

• If a minus tolerance is specified for the corner-R(rε) as shown in the Fig.1, using an insert with corner-R = 0.008" may result in larger radius than specified.

• Use an insert whose corner-R(rε) has a minus tolerance.

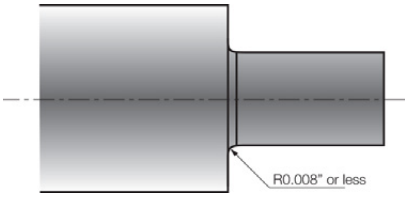

Fig.1 Example of a specified corner-R in drawing

Inserts sold in 10 piece boxes.

Cutting Range	Name	Cross-Section	Advantages
Finishing-Medium	**SK**		A low cutting force chipbreaker designed for chip control in steel and stainless steel. Cutting performance is similar to comparably sized positive inserts.
Medium-Roughing	**GK**		Chipbreaker "dot" and pocket design provide chip control at multiple depths of cut and feed rates.
Finishing	**F**		Controlled chip evacuation direction with low cutting forces.
Low Feed	**U**		Good chip control at low feed rates and varied depths of cut with low cutting forces.

MEGACOAT CBN

Extended Tool Life | **Improved Stability** | **High Speed Cutting**

Kyocera's new innovative CBN tools.
CBN Variation and Features Ref. Page ➡ **A15**

Various edge preparations added to the high performance MEGACOAT CBN inserts

Turning Insert Identification System

C C M W 2 15 05 T00315 ME

Refer to ➡ **B2** for "Turning Indexable Inserts Identification System"

Insert Type	Part Number	Edge Prep.	Manufacture's Option	Cutting Edge Length	No. of Edges	Re-Grinding
Positive	CPGB321T00315	T00315	No Indication	Long	1	Possible
	CCMW21505MEF	F	MEF	Short (Small Edge)	2	Not Recommended
	CCMW21505T00315ME	T00315	ME		2	
	CCMW21515S00525MES	S00525	MES		2	
	CCMW21505T00315SE	T00315	SE		1	

• Re-Grinding

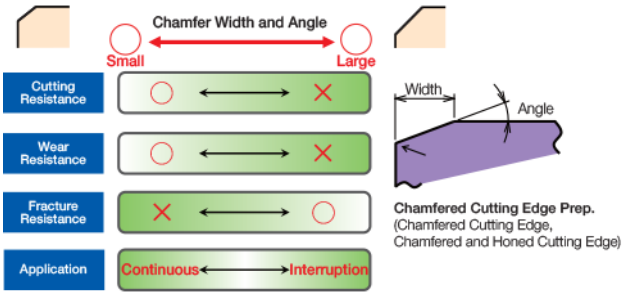
1) Regrinding is possible for inserts without any indication in manufacturer's option. Regrinding may not be available depending on the edge condition.

2) Regrinding is not recommended for inserts with manufacturer's symbol like "ME" or "SE".

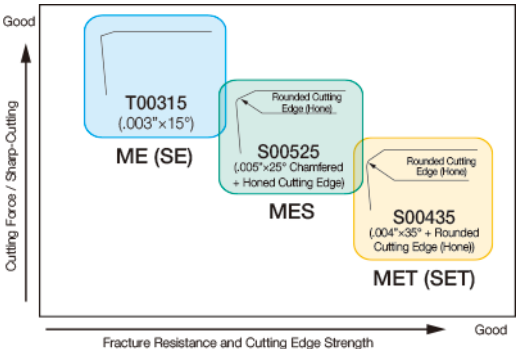
How To Identify Edge Preparation

Edge Prep.				
Symbol	Cutting Edge Spec.	Example		Shape
F	Sharp Edge	F	Sharp Edge	Sharp Edge
E	Rounded Cutting Edge (Hone)	E003	R0.003" Honed	Rounded Cutting Edge (Hone)
T	Chamfered Cutting Edge	T00515	0.005" X 15° Chamfered Cutting Edge	0.005" 15°
S	Chamfered and Honed Cutting Edge	S00525	0.005" X 25° Chamfered + Honed Cutting Edge	0.005" 25° Honed

Features of Chamfer Width & Angle



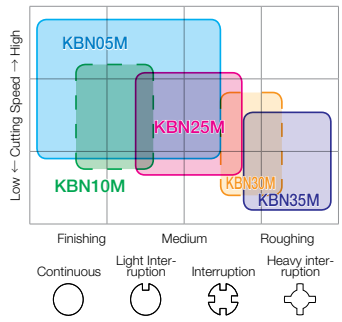
Standard Cutting Edge Prep. of Positive Inserts



Manufacturers Option	Cutting Edge Prep.		Application & Features
ME	T00315	0.003" X 15°	**Chamfered** Sharp cutting oriented, less burring
MES	T00515	0.005" X 25° + Rounded Cutting Edge (Hone)	**General Purpose**
MET	S00525	0.004" X 35° + Rounded Cutting Edge (Hone)	**Interrupted Cutting** Stable cutting oriented

Application Maps

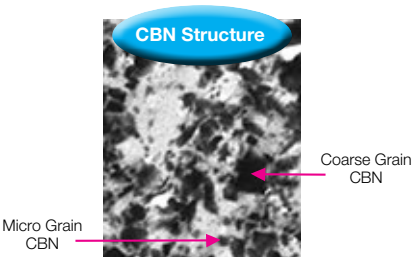
Hardened Materials

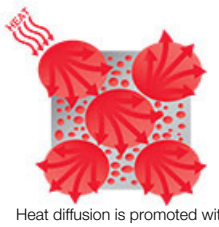


KBN05M
1st recommended grade for a wide range of applications from continuous (high speed finishing) to interrupted cutting.

Hybrid Grain Structure (KBN05M)

Mixed structure of micro grain CBN and coarse grain CBN
➡CBN possesses high hardness, toughness, and thermal resistance characteristics





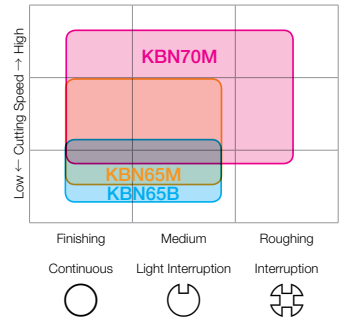
Heat diffusion is promoted with coarse grain CBN
➡High thermal conductivity

KBN25M: High stability for general cutting

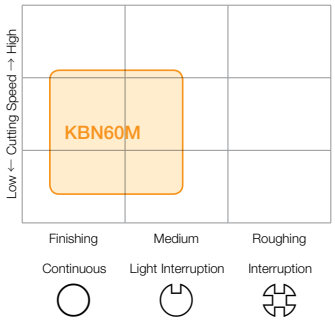
KBN30M: High stability during interrupted cutting

KBN35M: Honeycomb structure CBN Superior fracture resistance in heavy interrupted cutting

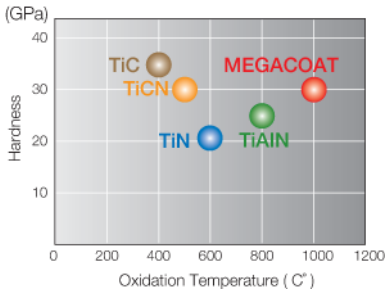
Powdered Steel



Cast Iron



PVD Layer Coating Properties



Advantages of MEGACOAT

- Long tool life and stable cutting due to superior heat-resistance and hardness
- Imrpoved crater wear resistance
- High thermal stability and surface smoothness provide excellent surface finish

Improved Stability
Extended Tool Life
High Speed Cutting

Recommended Cutting Conditions

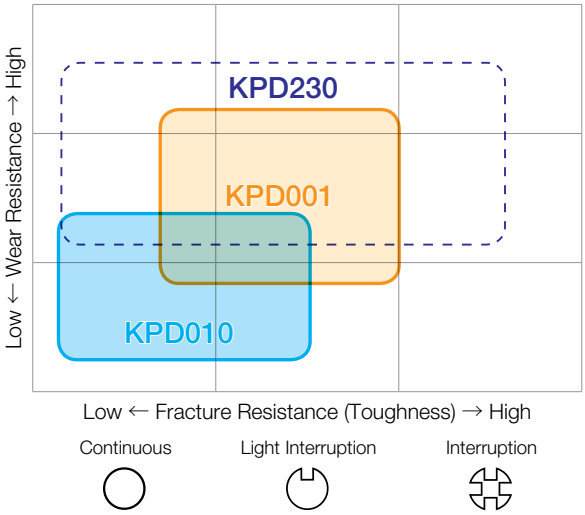
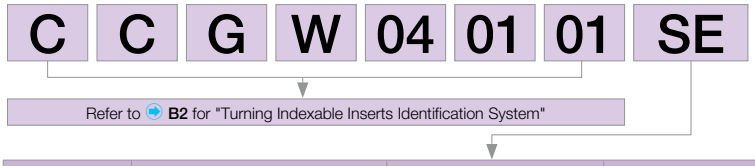
Application Map



About Insert Grades

Grades	Applications	Advantages
KPD001 (Average grain size under 1μm)	• High speed machining of non-ferrous metals and brass • High speed machining of glass fiber and plastics • Machining of carbide and ceramics	• Smallest micro-grain possible in PCD • High edge strength with superior wear resistance, fracture resistance, and edge sharpening performance
KPD010 (Average grain size 10μm)	• High speed machining of non-ferrous metals and brass • High speed machining of glass fiber and plastics • Machining of carbide and ceramics	• Well balanced wear resistance and flexural strength • General Purpose
KPD230 (Mixture of fine grain with average grain size 2-30μm and rough)	• High speed milling of aluminum alloy and non-ferrous metals such as brass • High speed milling of glass fiber and plastics	• High density PCD with mixture of both rough and fine grains with excellent abrasive wear and chipping resistance

Turning Insert Identification System



Insert Type	Part Number	Manufacture's Option	Series Name	Cutting Edge Length	No. of Edges	Regrinding
Positive	**CCGW040101SE**	SE	Small Edge	Short (Small Edge)	1	Not Recommended
	CCGW040101NE	NE	New Value Edge	Long (85% length compared to no indication's cutting edge)	1	Possible
	CCGW040101	No Indication	-		1	

Note) 1. No edge preparation symbols for PCD inserts. Most of the PCD inserts' edge preparations are sharp edge.
2. Refer to **Page** ➡ **B6** for insert color.

• About Regrinding

1) Regrinding is possible with the inserts with "NE" and no symbol in manufacturer's option 2. Regrinding can not be available on the edge condition.
2) Regrinding is not recommended for inserts with "SE" in manufacturer's option 2.

Recommended Cutting Conditions (Turning)

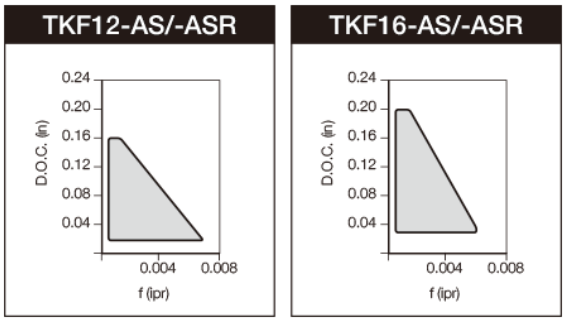
- 200 / 200: Width (Edge Width)
- AS / AS: Name of Chipbreaker
  - AS : AS Chipbreaker
  - NB : Without Chipbreaker
- R: PCD Insert Hand
  - Without Indication: The edge hand is the same as the insert hand.
  - R : Right-hand

● Applicable Range



- TKF PCD inserts are only for turning and grooving
- Cut-off is not recommended

Note) 1. The cutting edge of the TKF-AS/-ASR will be 1mm lower than the center line when attached to the KTKF toolholder (Ref. **Fig.1**). Adjust the height by making NC lathe parameter settings or inserting a plete.

2. If the 1mm adjustment is not possible on your automatic lathe, use the TKF-NB (Ref. **Fig.2**).

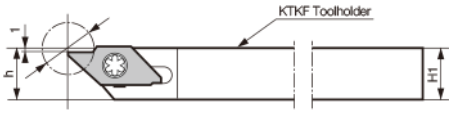


Fig.1 When a TKF-AS/-ASR insert is attached
(The cutting edge is 1mm lower than the center line.)

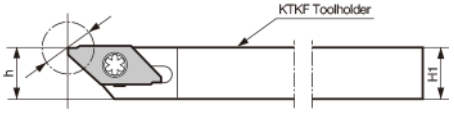

Fig.2 When a TKF-NB insert is attached

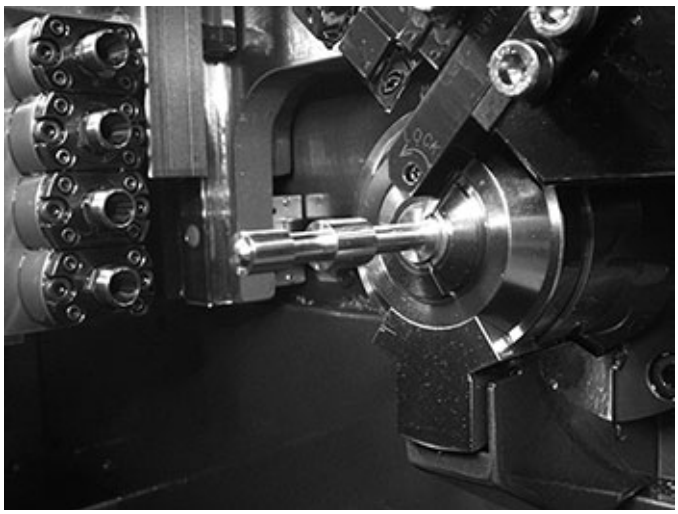
When Using TKF-AS Inserts

KTKF toolholder is multi-functional for non-ferrous and non-metal materials when combined with a TKF-AS insert. **(Fig.1)**



Example of Spool Cutting

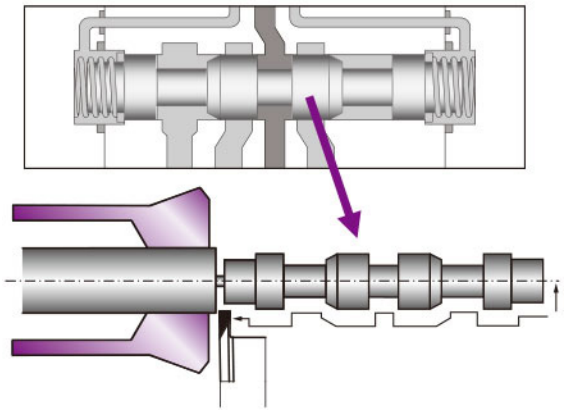


Fig.1 Example of the pass of KTKF toolholder + TKF-AS insert

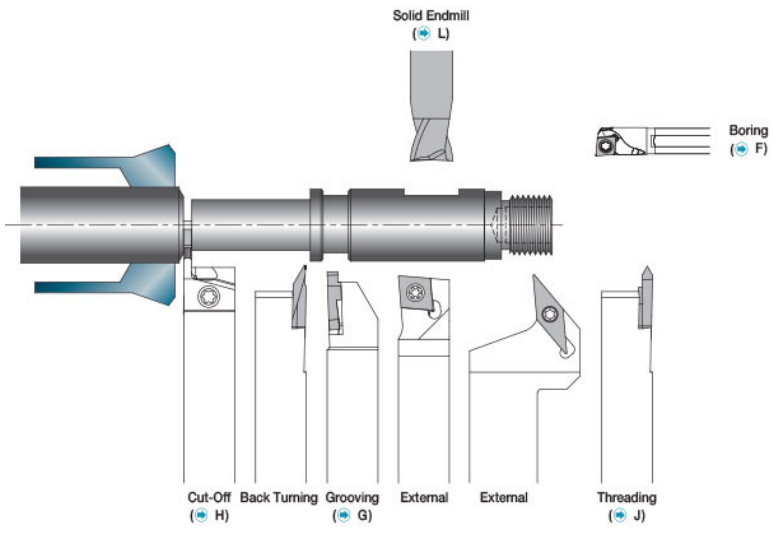
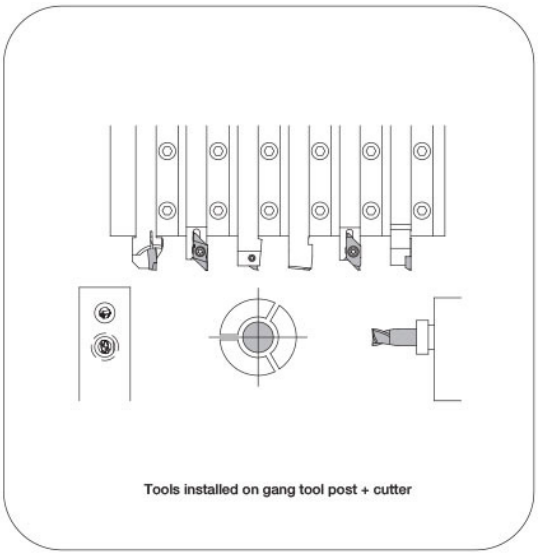
Tooling Example ② - CNC Automatic Lathe (Gang Type)





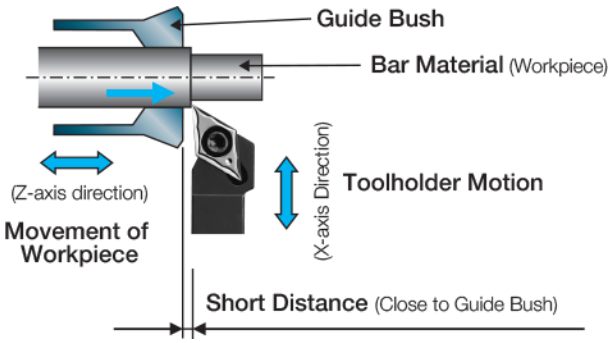
Goose-neck Toolholder

for Swiss Tool Automatic Lathe (Gang Edge Tool Post)

Swiss Tool Automatic Lathe (Guide BushingSystem)

The Goose-neck Holder works with automatic lathes that do not move toolholders in longitudinal direction (Z-axis)

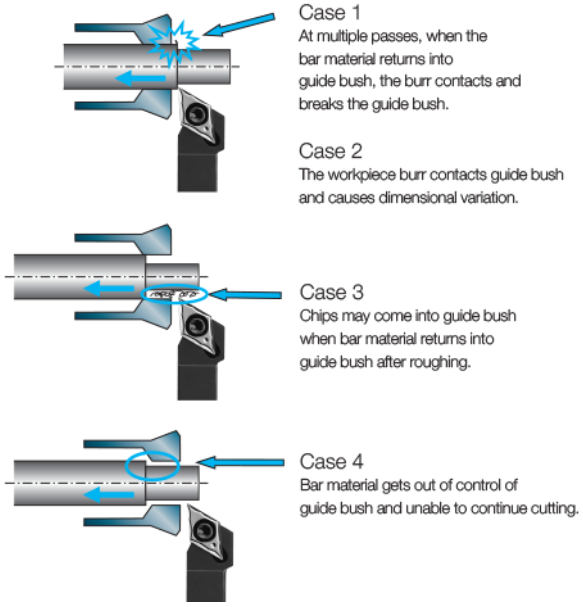
When Using a Conventional Toolholder



Tool position is fixed and workpiece moves longitudinally

Problems When Using a Conventional Toolholder

Problems When Machining with a Conventional Toolholder



Case 1
At multiple passes, when the bar material returns into guide bush, the burr contacts and breaks the guide bush.

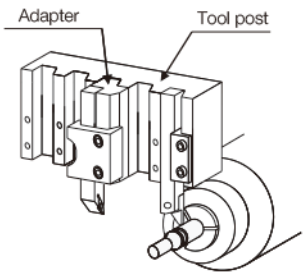
Case 2
The workpiece burr contacts guide bush and causes dimensional variation.

Case 3
Chips may come into guide bush when bar material returns into guide bush after roughing.

Case 4
Bar material gets out of control of guide bush and unable to continue cutting.

Toolholder Installation Problems When Using a Conventional Toolholder

1) Additional space is required for an adapter.
2) Toolholder's handlingis difficult due to limited space.
3) It is necessary to buy an adapter.
4) An adapter may interfere with the next toolpost



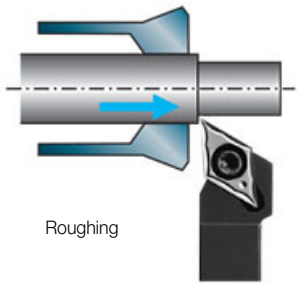
ADVANTAGES

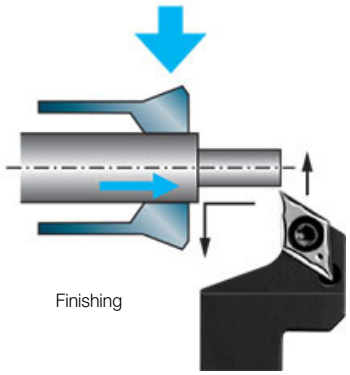
of the Goose-Neck Holder

1) Additional finishing process improves machining precision
2) Chips do not enter guide bushing
3) Large chip evacuation space produces better chip control

Available for machining after roughing without returning bar material into guide bushing, prevents damages and improves precision.

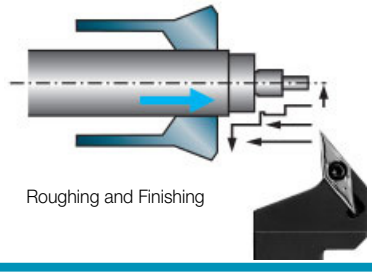
Pattern 1



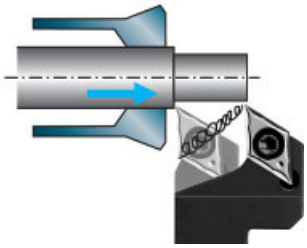


Available for machining from roughing to finishing with a single Goose-neck Holder.

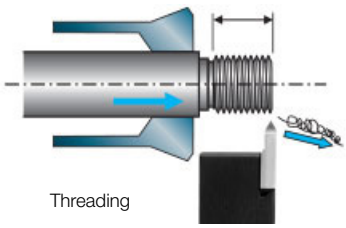
Pattern 2



For smooth chip control



Optimized location of the cutting edge makes enough space for smooth chip evacuation of long chipping materials



With conventional toolholders, chips can be involved in guide bushing and damage workpiece

Advantages of Toolholder Installation

Using Goose-neck Holder

1) Maximum number of toolholders can be attached
2) No interference with next tool post

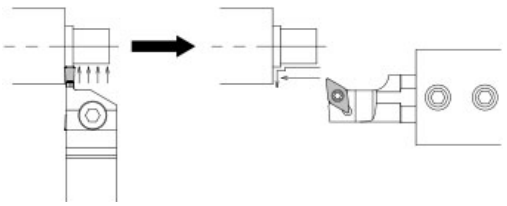
See **Page** ➡ **R19~R24** for Automatic Lathe List of Machine Manufacturer and Tooling Examples

Examples of Finishing by Sleeve Holder

1) Roughing by Grooving Toolholder
2) Finishing by Sleeve Holder Improves Chip Control and Reduces Cutting Time



Double-Sided Swiss Tools (Screw Clamp)

Application	External / Facing	External / Up Facing	External / Copying
Cutting Edge Angle	95°	95°	95°
Screw Clamp (Without Offset)			Ref. Page	E38	E39	E38

The double-sided design offers less cost per insert and more stability.
Sharp cutting performance equivalent to conventional positive inserts.

Double-Sided Toolholder for Automatic Lathe (Without Offset / Lever Lock)

Application	External / Facing	External / Up Facing
Cutting Edge Angle	95°	95°
Screw Clamp (Without Offset)		Ref. Page	E40	E41

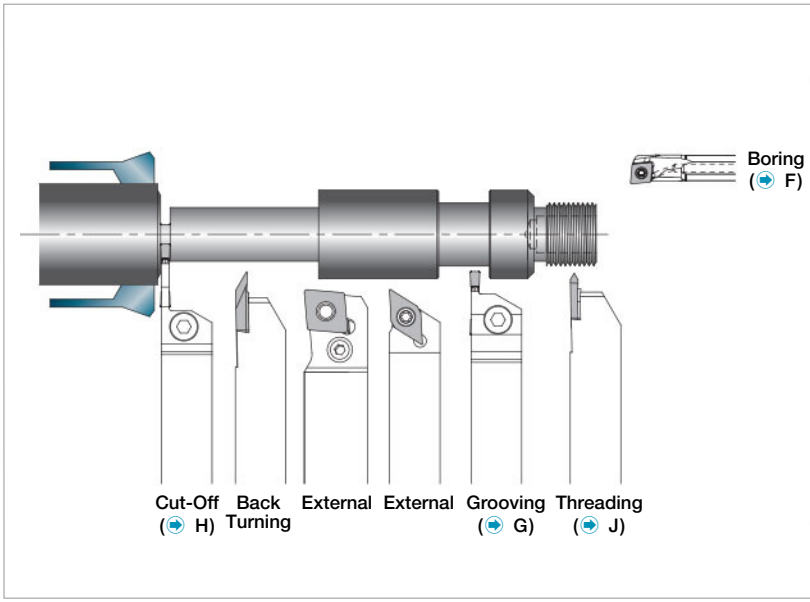
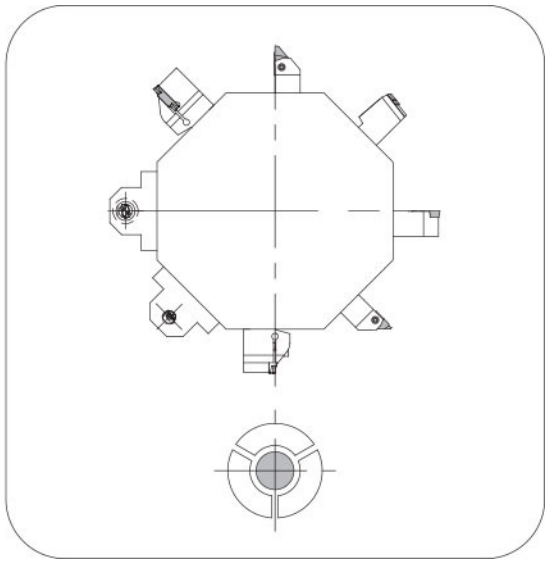
The Lever Lock type is available for small tools with external turning.

Double-Sided Toolholder for Automatic Lathe (Without Offset / Lever Lock)





See **Page** **R19~R24** for Automatic Lathe List of Machine Manufacturer and Tooling Examples

Achieving Better Chip Control During External Turning

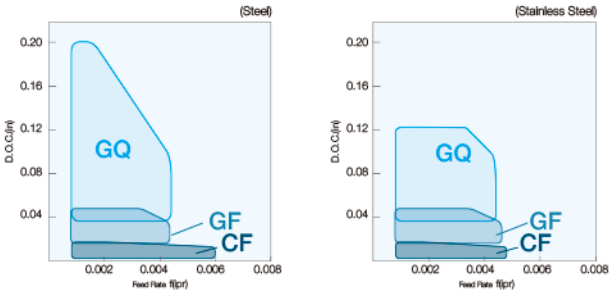
1) Use chipbreakers for various depths of cut

- Applicable to high precision cutting due to a finely ground sharp edge.
- The mirror polished insert provides improved adhesion resistance and surface finish.

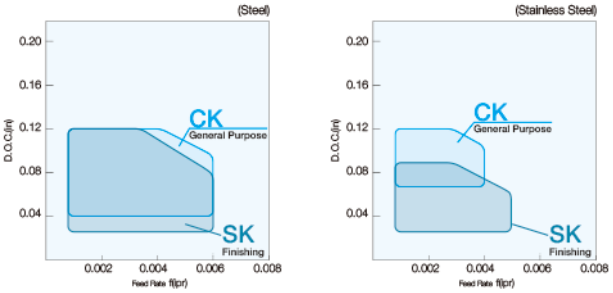
2) Improved chip control by cutting in 2 passes; roughing and finishing

- If chip control is not improved in 1 pass, use Goose-neck Holders or Sleeve Holders

Chip Processing



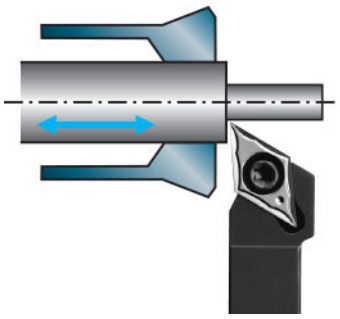
Low Resistance



Problems

Finishing with a General Toolholder

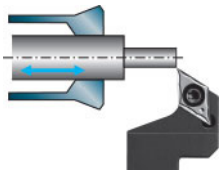
Bad Chip Control



After Roughing

Solution ①

Finishing with a Goose-neck Holder



Solution ②

Finishing with a Sleeve Holder

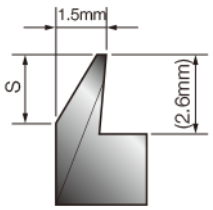
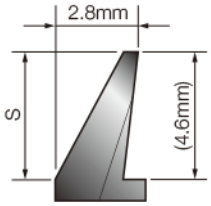
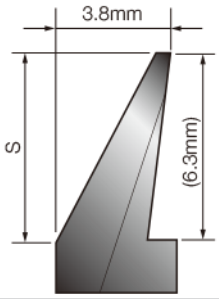
Cutting Edge Shape

For Small D.O.C.		For General Purpose		For Large D.O.C.	
					






Part Number	Cutting Edge Length **S**	Part Number	Cutting Edge Length **S**	Part Number	Cutting Edge Length **S**
TKFB12R15..	2.1	**TKFB12R28..**	4.2	**TKFB16R38..**	5.8
-	-	**TKFB12L28..**	4.4	**TKFB16L38..**	6.2
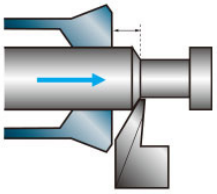
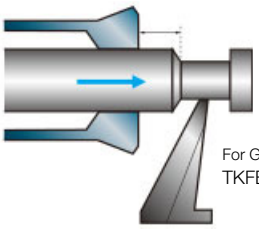
For small diameter workpieces or short length Minimum overhang length of toolholder, stable machining		For general purpose Good chip control		D.O.C. per pass is large.	

How to Select



For Small D.O.C.
TKFB12R15..



For General Purpose
TKFB12R28..

In case D.O.C. is same, if insert with narrower edge width is used, overhang length from guide bushing is shorter, which enables better stability due to less workpiece vibration.

➡High Precusion Cutting

Choosing Hand of Back Turning Toolholder

(R) Right hand		Cutting close to guide bushing is possible Since TKFB12R15005M has a narrow cutting edge (width=0.059"), cutting close to guide bushing is possible ➡Good for small parts and high precision cutting
(L) Left hand		Cutting with distance from guide bushing Good chip control due to large space between the guide bushing and the tool. ➡How to improve chip control for roughing to finishing In case of using a left-hand toolholder in finishing, the burred portions of workpiece do not return into the guide bushing, which enables stability of external diameter. Also, a Left-hand toolholder prevents wear of guide bushing due to chip biting.

Workpiece Material Motion & How to Select Hand of Tool

When Roughing, Medium, & Finishing

	Roughing	Workpiece position after roughing	Finishing
(R) Right hand			(L) Left hand			
※Good dimensional accuracy: If a L-hand toolholder is used, burrs on workpiece generated during roughing do not damage the guide bushing during finishing.

Chip Control Improvement During Back Turning

	① Chip control improvement by tool pass changes	② Chip control improvement by tool pass changes
Roughing / Pre-Stage Machining	● Roughing (1) GMM2420-020MW (Grooving) 	● Pre-stage Machining is Processed with Solid End Mill (1) 2FESW040-040-04 (Solid End Mill) Finishing (Countermeasure 1) Use Right-Hand Toolholder	(1) When Using TKFB12R28010M (Back Turning / Righ-hand)  **Advantages :** Smooth Surface Finish **Disadvantages :** If machining pass is long, the guide bushing can not support the workiece	(1) When Using TKFB12R28010M (Back Turning / Righ-hand)  **Advantages :** 1. Minimal deflection during long machining passes 2. Chips are broken into small pieces, though the workpiece material is elastic. **Disadvantages :** The pre-stage machining may cause fractures, because of interruption
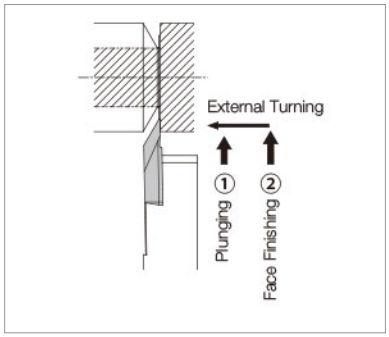
Finishing (Countermeasure 2) Use Left-Hand Toolholder	(2) When Using TKFB12L28010M (Back Turning / Left-hand)  **Advantages :** 1. Smooth Surface Finish 2. High precision cutting if the machined portion does not contact the guide bushing **Disadvantages :** If machining pass is long, the guide bushing can not support the workiece	(2) When Using TKFB12L28010M (Back Turning / Left-hand)  **Advantages :** 1. Minimal deflection during long machining passes 2. Chips are broken into small pieces, though the workpiece material is elastic 3. High precision cutting if the machined portion does not contact the guide bushing **Disadvantages :** The pre-stage machining may cause fractures, because of interruption

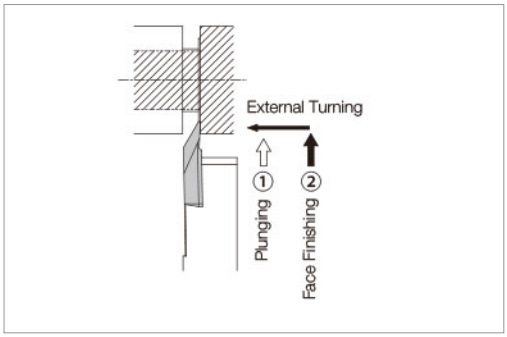
Peeled Surface Countermeasures During Face Back Turning

When peeled surface occurs on the workpiece face, please apply the countermeasures below.

● **Countermeasure 1** (Face Finishing)

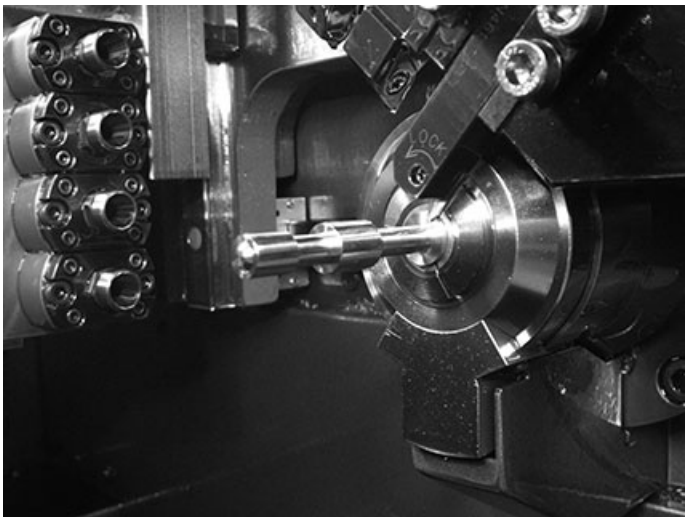


● **Countermeasure 2** (Face Finishing After Grooving)

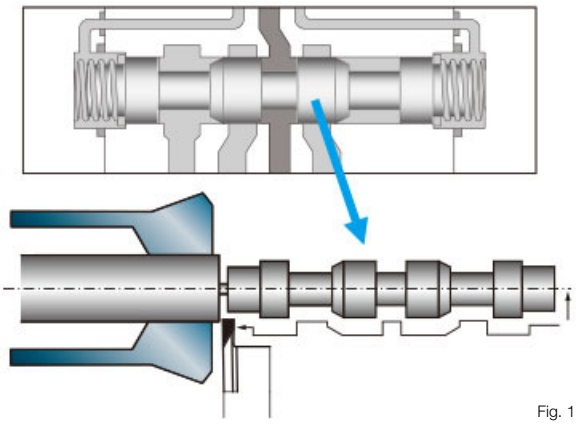


TKF-AS Inserts

The KTKF toolholder can be used as multi-functional tooling for non-ferrous and non-metal when combined with a TKF-AS insert. (See Fig. 1)



Example of Spool Cutting



Example of the pass of KTKF toolholder + TKF-AS insert

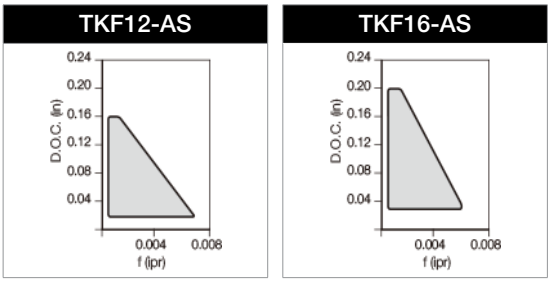
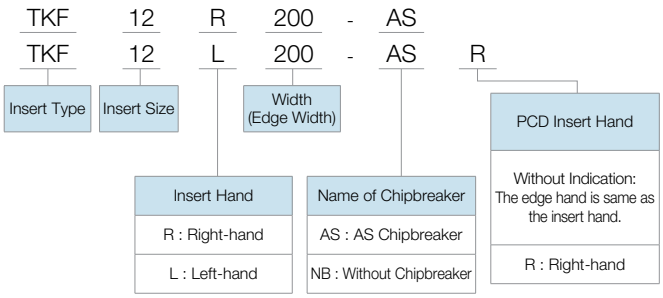
Applicable Range



※ PCD inserts are for traversing and grooving.
※ Cut-off is not recommended with these inserts.

Insert Identification System



Note 1) When using TKF-AS/-ASR insert with KTKF toolholder, the edge position is 1.0mm below the center. (See **Fig.2**) Please adjust the edge height at the parameter of the NC lathe or using soleplates.

2) When the edge height can not be adjusted, please use TKF-NB insert. (**Fig.3**)

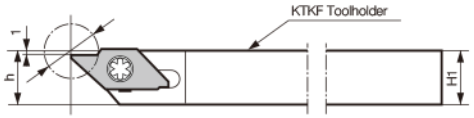


Fig.2 When TKF-AS/-ASR installed (the edge position: 1.0mm below the center)

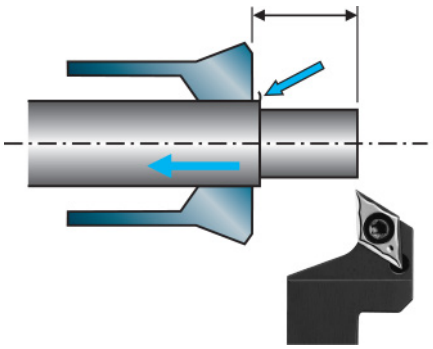
Goose-neck Designed for Multiple Passes, Both Roughing & Finishing!

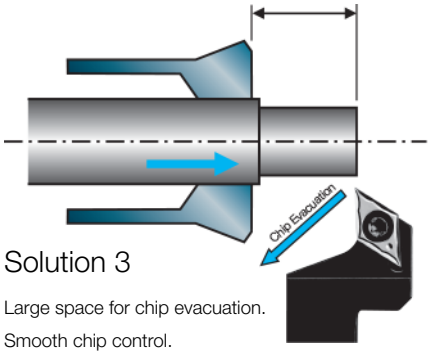


Solution 1

No breakage will occur because the burrs do not contact the guide bushing.

Solution 2

Longitudinal dimensions will be stable. External diameter will be stable by multiple pass machining (roughing and finishing).



Solution 3

Large space for chip evacuation. Smooth chip control.

Toolholders for Small Double Sided Tooling (Screw Clamp, Without offset)

Specially designed negative inserts (double-sided) for small workpieces enable sharp cutting equivalent to positive inserts, achieving high productivity due to economical double-edge inserts

Double-sided Inserts for small part precision cutting

TNGU18...

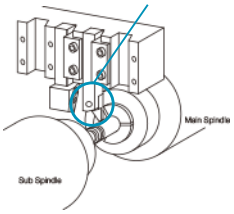
Small Negative Insert

TNGG33...

Conventional Negative Insert

No constraint of tool position against tool post in the newly designed small double-sided insert.

The conventional toolholders for negative insert can interfere with sub spindle.



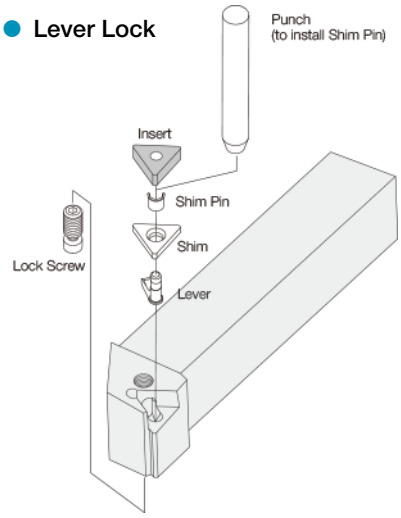
No interferance with sub spindle

Toolholders for Small Double Sided Tooling (Screw Clamp, Without offset)

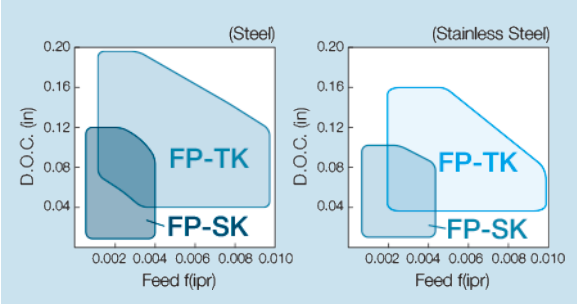
For medium to high feed rates with automatic lathes (when cutting workpieces of medium to large dia.)

Sharp cutting oriented FP-SK/TK Chipbreaker with polished and sharp edge preparation.

Lever Lock



Applicable Chipbreaker Range



Chipbreaker Shape & Advantages

Design			Advantages
FP-SK 			Polished chipbreaker. Smooth chip control and less adhesion. (for finishing-medium)
FP-TK 			Polished chipbreaker. Smooth chip control and less adhesion. (when cutting medium to large diameter workpieces)

Double-sided design allows both edges to be used. Compared to the positive type, the double-sided design offers less cost per insert and more stability.

BORING

F

F1 - F72

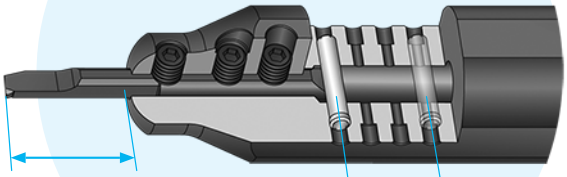
EZ Bar

Kyocera's Original EZ Adjust Structure

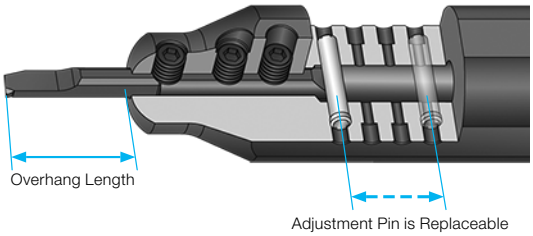
- **Easy adjustment and high precision**
- **EZ Bar minimizes deviation with high rigidity clamping**

MEGACOAT PR1225
for Stable Cutting and Extended Tool Life

Kyocera's Original EZ Adjust Structure

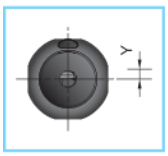


Tool Preparation Time is Reduced

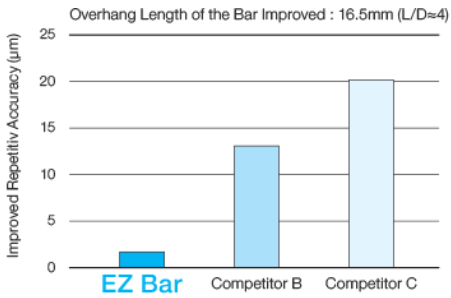


Easy adjustment and high precision after bar changes due to adjustable overhang lengths.

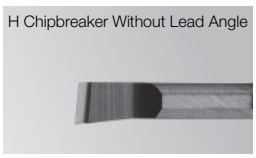
High Precision Cutting with High Repeatability



• Comparison of Repetitive Accuracy
Y = Cutting Edge Height

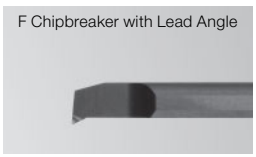


Boring Insert Lineup



Tough Edge (General Purpose)

Recommended D.O.C. More than 0.008"

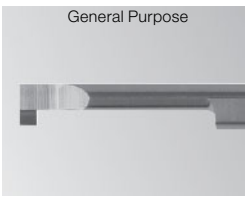


Sharp Cutting (for Finishing)

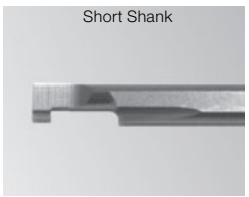
Recommended D.O.C. Less than 0.008"

No Chipbreaker
(for Brass and Non-ferrous Materials)

Grooving Insert Lineup



Applicable for Various Applications



Low Cutting Force and Anti-chattering

- **New EZVB for internal profiling**
- **New EZ Bar Plus lineup added**

Micro Boring Double-Sided Micro-Bars

- Cost efficient 2-edge inserts.
- Minimum bore diameter 2.0mm.
- Adjustable overhang length.
- Integral shank is adopted to enable installation to standard sleeves.
- Sleeves are applicable to various machine manufacturers' specifications.

Min. Bore Dia. ØA is indicated by the figure under ● depending on the boring bar size.

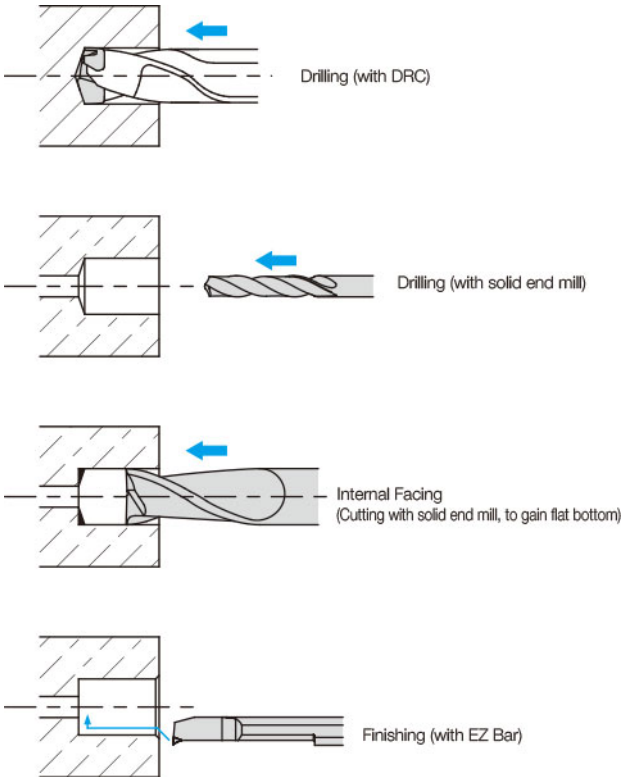
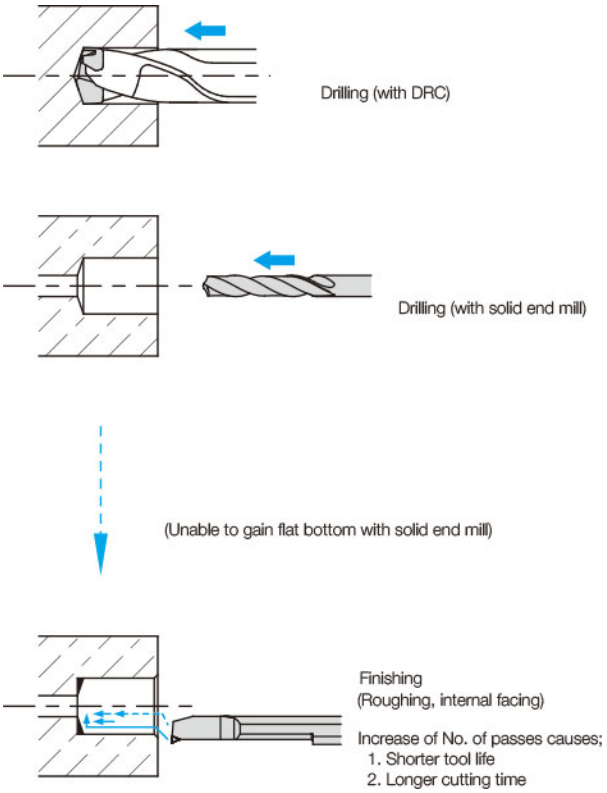
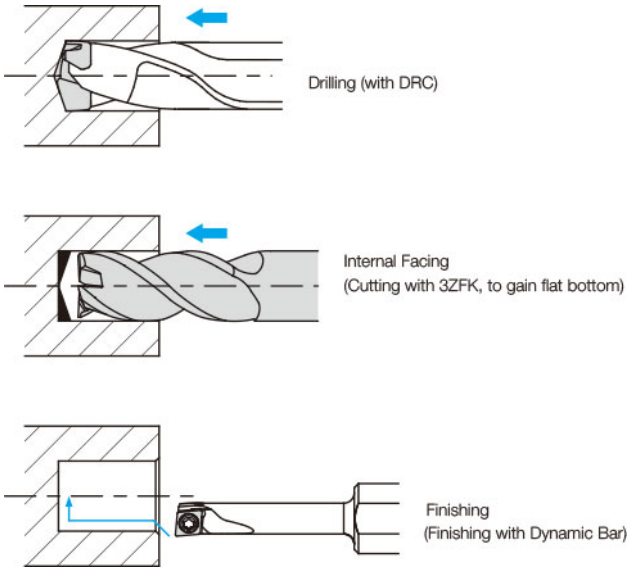
Boring Example ①

Example of Cutting Time Reduction	Example of Conventional Cutting
	




Boring Example ②

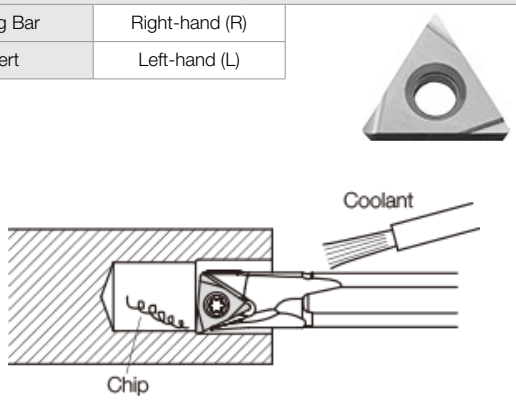
Example of Cutting Time Reduction

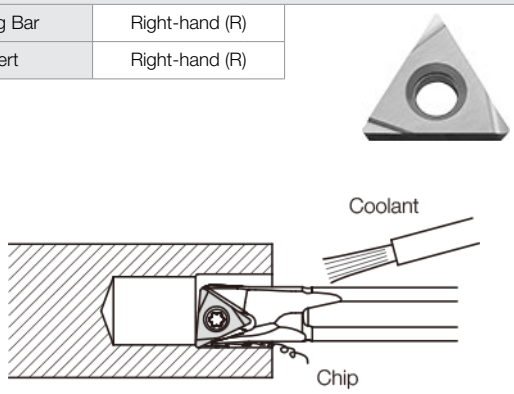


How to Select Ground Chipbreakers (for Internal Finishing in Automatic Lathes)

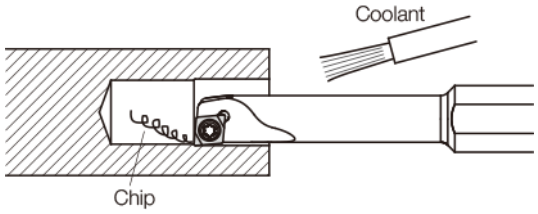
Choose a ground insert with an appropriate hand, in order to evacuate chips to the outside of the workpiece.

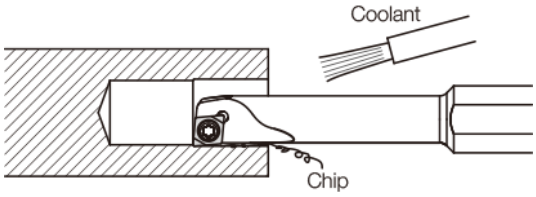
General Combinations		Combination for chip evacuation toward the exit of hole	
Boring Bar	Right-hand (R)	Boring Bar	Right-hand (R)
Insert	Left-hand (L)	Insert	Right-hand (R)





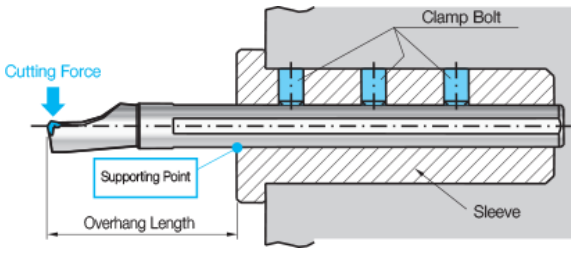
Boring Bar	Right-hand (R)	Boring Bar	Right-hand (R)
Insert	Left-hand (L)	Insert	Right-hand (R)





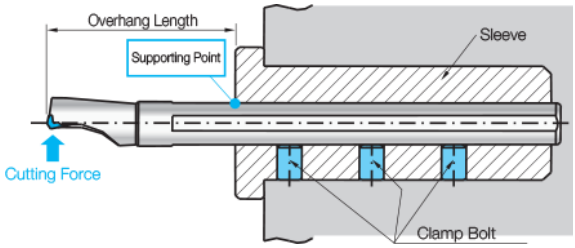
Toolholder Attachment to Reduce Chattering

① Normal Mounting



- When clamping rigidity is low, chattering tends to occur. Tighten the toolholder firmly with at least two clamp bolts.
- If the entrance of the sleeve is deformed or loosened, actual overhang length becomes longer and chattering can occur

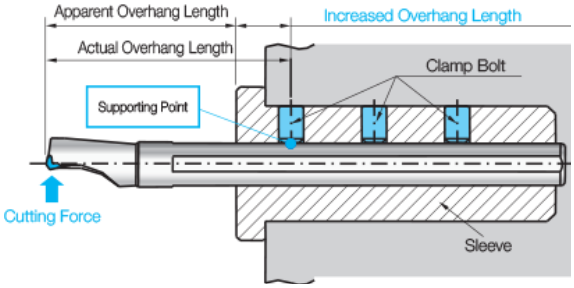
② Reverse Mounting



Tighten the clamp bolts from the insert mounting side

※ Edge height can be affected by which side the clamping bolts are tightened from.

③ Bad Attachment



- When the supporting point lies on the front of the clamp bolt, the actual overhang length becomes longer and it can cause chattering. The edge height can also be changed.

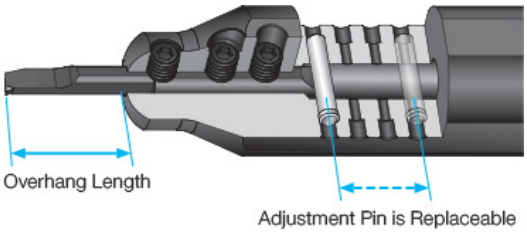
EZ Bar

Kyocera's Original EZ Adjust Structure

- **Easy adjustment and high precision**
- **EZ Bar minimizes deviation with high rigidity clamping**

MEGACOAT PR1225
for Stable Cutting and Extended Tool Life

Easy Adjustment / High Precision



How to Select Bars

HP for high precision and ST for cost reduction (Tolerances are different.)

	Insert Tolerance	Offset	Longitudinal direction	Cutting edge height	Min. Bore Dia.
HP Precision-oriented	±0.025mm	±0.05mm	+0.05mm/0mm	Same as Shank Dia.
ST Cost-oriented	±0.060mm	±0.10mm	+0.06mm/0mm	Not same as shank dia.

* See "Dimensions" page for details.

How to Select Sleeves

New indexable boring bar added
EZ Bar Plus

NEW **CT** with coolant hole
HP with EZ adjust structure
ST for cost oriented cutting

CT and HP can adjust overhang length by EZ adjust structure

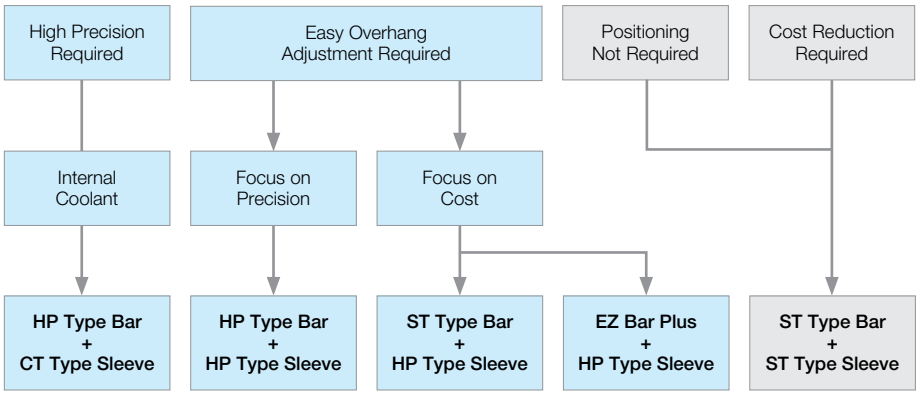
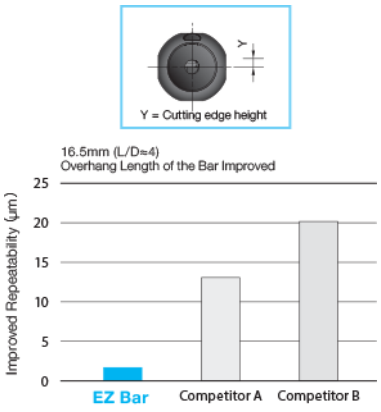
How to Select Bars and Sleeves for Each Application



HP Type Bar + CT/HP Type Sleeve

Excellent repeatability and drastic tool change time reduction

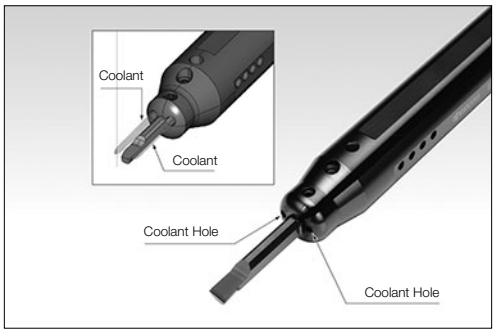


EZH-CT (High precision with coolant hole)

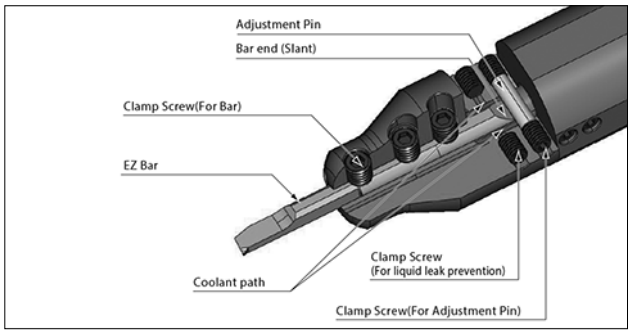
Now added in the **EZH** sleeve Lineup!

Kyocera's unique EZ adjust structure and internal coolant system improve dimensional accuracy and surface roughness!

EZH-CT Applicable Sleeve



EZH-CT Internal Stucture



How to Set Bar in Sleeve

● How to use adjustment pin and prevent coolant leakage (Fig.1)

① Put the adjustment pin into the hole according to the overhang length and push it into the sleeve using the wrench "LW-1.5".

② Tighten the clamp screw for the adjustment pin "HS3x4P" using the wrench "LW-1.5" from both sides of the sleeve.

③ Put the additional clamp screws "HS3x4P" into the un-used adjustment pin holes to prevent coolant leakage using the wrench "LW-1.5" and fix them from both sides of the sleeve.

● How to secure the bar (Fig.2)

① With the chip pocket upward, set the bar into the sleeve. Press the slant face of the bar end with the adjustment pin. Make sure that the bar does not rotate. **(Fig.3)**

② Tighten the clamp screw with wrench "LW-2" and secure the bar. (Use "LW-1.5" if shank dia. is 3mm or less.)

EZ Bar Identification System

EZ H 017 16 HP - 100

EZ Symbol of Bar	Application	Shank Dia. of EZB Bar	Sleeve Shank Dia.	Symbol of Precision		Overall Length of Sleeve
	H-Sleeve	017 : 1.7mm	16 : 16.00mm	**CT**: High Precision with Coolant Hole		100 : 100mm
		025 : 2.5mm	25.4 : 25.40mm	**HP**: Precision	**ST**: Standard	120 : 120mm

EZ Bar Mounting Procedure

● How to use adjustment pin (Fig.1)

① Put the adjustment pin into the hole.
② Push it into the sleeve, using the wrench “LW-1.5.”
③ Tighten the clamp screw “HS3x4p” with wrench “LW-1.5” to fix the adjustment screw.

●How to secure bar (Fig.2)

① With the chip pocket upward, set the bar in sleeve.
Press the slant of the end of the bar against the adjustment pin.
Make sure that the bar does not rotate. (Fig.3)
② Tighten the clamp screw with wrench “LW-2”and secure the bar.
(Use “LW-1.5” if shank dia. is 3mm or less.)

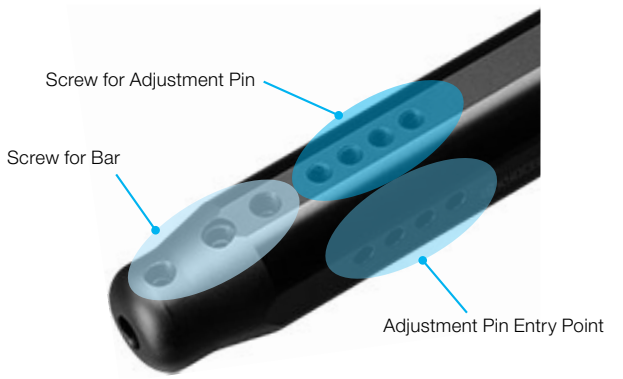
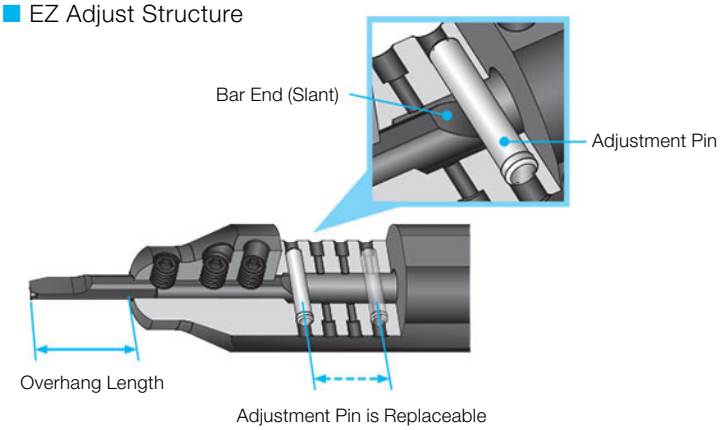
EZ Bar Operability

Easy Adjustability of Bar Reduces Preparation Time!

EZ Bar Spare Parts

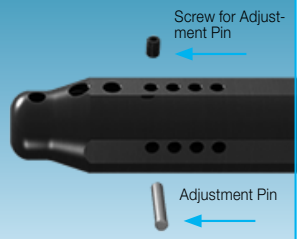


EZ Adjust Structure



How to Attach Adjustment Pin

STEP1



Insert the Adjustment Pin into the Hole.

STEP2

Fit the Adjustment Pin with Screw

How to Clamp Bar

STEP3

Press the Slant End of the Bar with the Adjustment Pin

STEP4

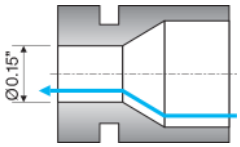
Fit the Bar with Bar Screw

※ Sharp cutting edge of the bars may cause injury. Be careful when handling them.

Case Studies

304SS

Valve Part
- Vc=250sfm
- D.O.C.=0.004"
- f=0.0012ipr
- Wet
- EZBR030030HP-015F (PR1225)
- EZH03025.0HP-135



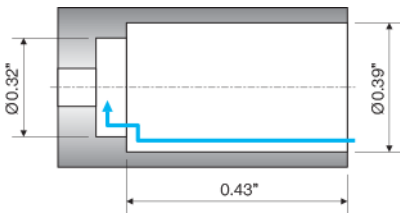
PR1225	3,000 pcs/edge
Competitor F	2,000 pcs/edge

Compared to Competitor F, EZ Bar showed 1.5 times longer tool life with superior stability and accuracy of cutting edge position.

(User Evaluation)

316SS

Connector
- Vc=150~200sfm
- D.O.C.=0.004"
- f=0.0012ipr
- Wet
- EZBR045040ST-008H (PR1225)
- EZH04025.0HP-135



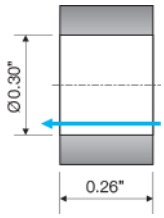
PR1225	2,000 pcs/edge
Competitor G	500 pcs/edge

Compared to Competitor G, EZ Bar showed 4 times longer tool life. Adjustable overhang length of sleeves (EZH-HP) drastically improved operability.

(User Evaluation)

1045

Sleeve (Automotive Part)
- Vc=150sfm
- D.O.C.=0.002"
- f=0.0024ipr
- Wet
- EZBR045040ST-008H (PR1225)
- EZH04016HP-100



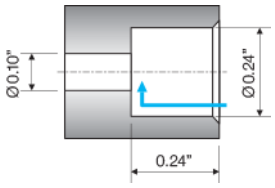
PR1225	2,000 pcs/edge
Competitor H	1,000 pcs/edge

Compared to Competitor H, EZ Bar doubled tool life. The excellent operability of the sleeve reduced the cycle time and improved productivity.

(User Evaluation)

12L14

Collar
- Vc=275sfm
- D.O.C.=0.002"~0.004"
- f=0.001ipr
- Wet
- EZBR040040HP-008H (PR1225)
- EZH04019HP-120



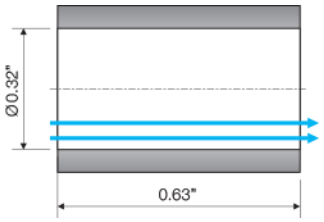
PR1225	10,000 pcs/edge (Stable Machining)
Competitor I	10,000 pcs/edge (Unstable)

Compared to Competitor I, EZ Bar achieved stable machining of 10,000 pcs/edge, minimizing deflection of the diameter. Number of defects is reduced drastically.

(User Evaluation)

4135

Sleeve
- Vc=100sfm
- D.O.C.=0.002" (2 passes)
- f=0.0012ipr
- Wet
- EZBR045040ST-008H (PR1225)
- EZH04019HP-100



PR1225	300 pcs/edge (Further Machining Possible)
Competitor J	150 pcs/edge

PR1225 has double the tool life of that of Competitor J with good chip control.

(User Evaluation)

303SS

Pipe
- Vc=125sfm
- D.O.C.=0.009"
- f=0.0012ipr
- Wet
- EZBR030030HP-015H (PR1225)
- EZH03016HP-100

PR1225	1,500 pcs/edge (No Defective Products)
Conventional K	1,500 pcs/edge (Unstable)

Conventional K was unstable in tool life and dimension. EZ Bar had stable machining.

(User Evaluation)

※ Every type of insert is attachable for SVNS-N, however in case of setting insert top at the toolholder face level, please use above applicable ( ) insert.
In this case, F3 dimension of toolholder and L2 dimension of insert will correspond.

1) SVN-N / S...SVN-N / S-SVN-SN Toolholders (without side stopper) retain high index accuracy by easy restraint.

2) For high-rigidity clamping, (e.g. when varying load direction of undercutting, internal and external, or face cutting by one tool), changing the SP3x4 screw to a HS3x4 screw (sold separately) enables the toolholder's rigid clamping equivalent to the side stopper holders.

Spare Parts (Optional)

Screw (Side Stopper)	Wrench
	
HS3×4	LW-1.5

● VNBX-S Attachment holder for VNBX-S Swiss IQ Bar

1. VNBX-S Attachment holder for VNBX-S Swiss IQ Bar is below (See page ➡ **F35**).
   ① SVNS-XN (Without Side Stopper)
   ② S…SVN-XN (Without Side Stopper)
   ③ S…SVN-SXN (Without Side Stopper)
2. Above holder assures high index accuracy by easy restraint.
3. A holder which attaches setscrews (without side stopper) can be used as binding effect holder as with side stopper holder, once taking off the setscrew, and insert a screw (HS3x4: sold separately) with wrench (LW-1.5: sold separately).

Spare Parts (Optional)

Screw (Side Stopper)	Wrench
	
HS3×4	LW-1.5

Swiss IQ Bars are sold in 5 piece boxes.

Recommended Cutting Conditions ➡ **F71~** ➡ **F72**

Features of C-SJLC

1. Well balanced design minimizing bore diameter yet maintaining a smaller insert radius.
2. High flexibility of tool pass during pecking.
3. Good surface finish at internal facing.

Features of C-SJZC

1. Back boring bars for workpieces which require high concentric circle accuracy and are unavailable for chuck change.
2. Available for back boring and pecking.
3. Large clearance between cutting edge and holder (1.8mm).

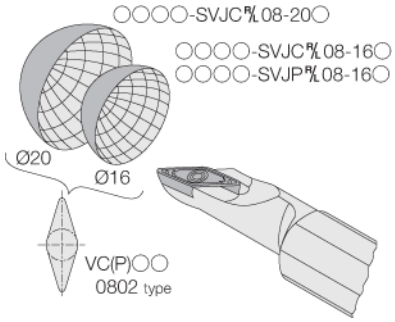
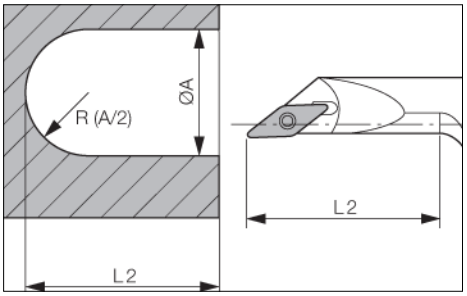
A...SVJP(C)-○, S...SVJP(C)-○ Excellent Bar (Internal Spherical Machining / Internal Facing)

〔 Refer to Page ➡ 58 (Dynamic bar) 〕

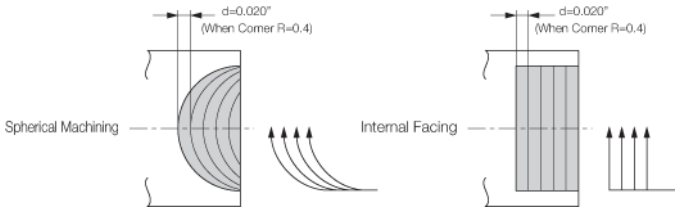
1. Application Range





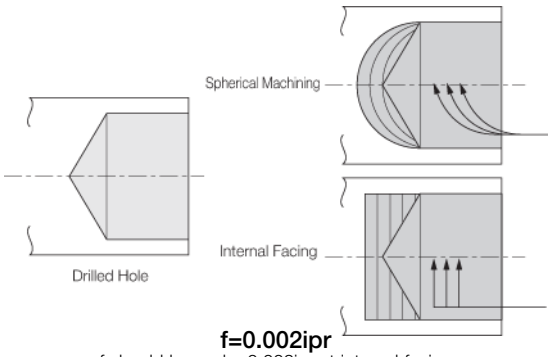
2. Machining Method

In Cases with No Existing Hole



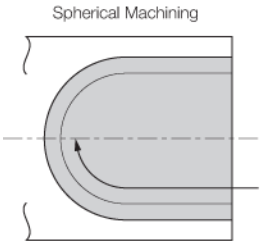
f=0.002ipr
f should be under 0.002ipr at internal facing

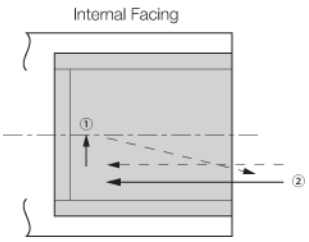
In Cases with Drilled Hole



f=0.002ipr
f should be under 0.002ipr at internal facing

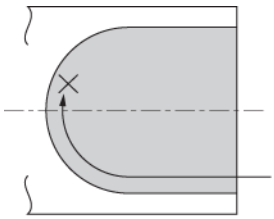
Finishing



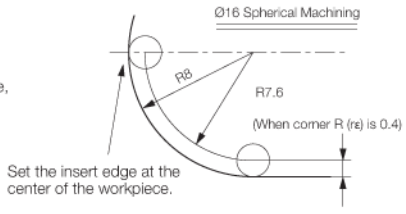


Machining Process
1. Finish the internal face firstly.
2. Next, finish the internal diameter.

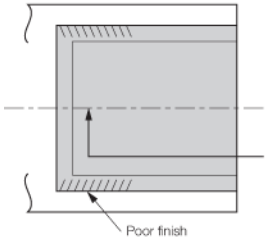
3. Caution



When machining past the center of the workpiece, insert breakage may occur.

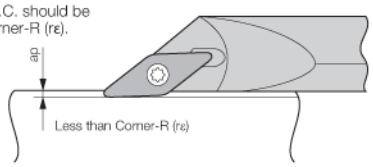


Adjust the machining program of radius smaller by Corner-R (rε) value.



Machining of this kind is available, but the oblique part may be scratched by chips.

For internal profiling, D.O.C. should be less than the value of Corner-R (rε).



(Burr may occur, if D.O.C. is bigger than corner-R)

External Grooving Toolholders KGBA Short Shank types are available
For NC lathe and HSK tooling, KGBAR2020K-○○ (Overall length 125mm) short shank type KGBAR2020H22-○○
(Overall length 100mm) is available., meaning it is no longer necessary for users to cut-down the shank.

KGD Insert Lineup

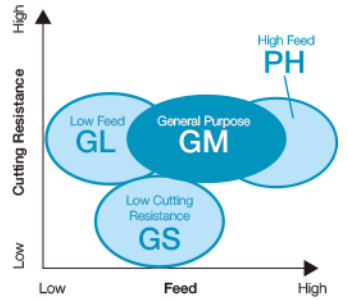
Smooth Chip Control
Introducing new chipbreakers designed to cover a variety of workpiece materials.

High Precision Edge Preparation
High precision molding technology with tolerance ±0.03mm (2, 3, 4mm types).

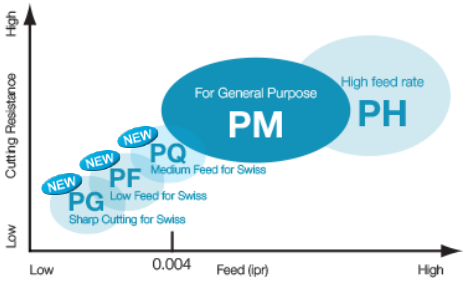
MEGACOAT Techology
Long tool life and high efficiency machining achieved by superior oxidation and wear resistance.

Application Map

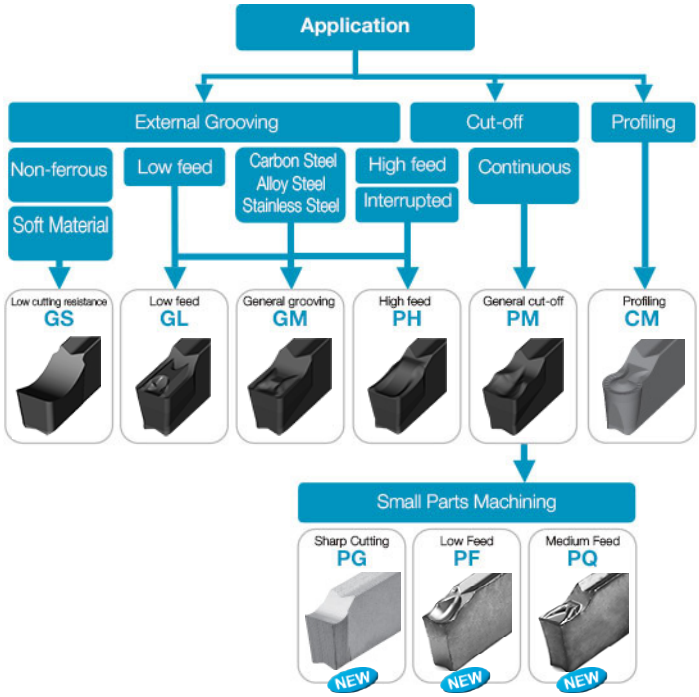
External Grooving & Traversing



Cut-off

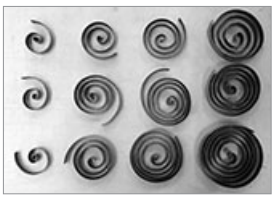


Chipbreaker Selection



PF / PQ / PG / PM / PH Cut-Off Inserts and Applicable Toolholders H12~ H13

Cutting Conditions - SCM415 Vc=500sfm, f=0.006ipr



GM Chipbreaker

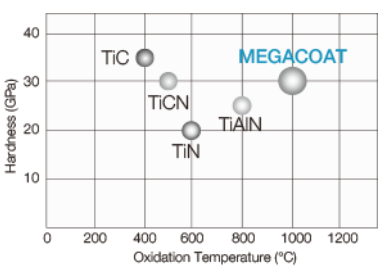
Competitor A

Competitor B

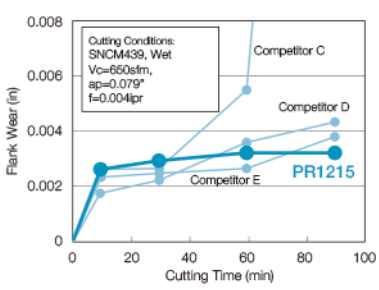
Better chip control than competitors

Reduces damage of cutting edge caused by crushing chips

MEGACOAT Features



Wear Resistance Comparison



PR1225
1st recommendation for cut-off, grooving, and traversing

PR1215
Superior wear resistance, recommended for grooving and cut-off under stable conditions.

1st recommendation for machining of cast iron

Setting the Insert

1. Completely eliminate chips from the insert mounting part. (see **Fig.1**)
2. Put the insert into the toolholder and push until it contacts the holder's surface for fixing the insert's back end. (see **Fig.2**, **Fig.3**)
3. Keeping the insert pushed against the toolholder's locating surface, tighten the insert clamp bolt at an appropriate torque.
4. Make sure there is no gap between the insert and the toolholder's locating surface and that the insert is set straight. (see **Fig.2**, **Fig.3**)

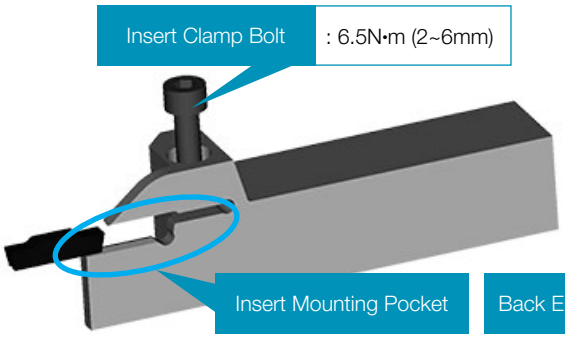


Fig.1

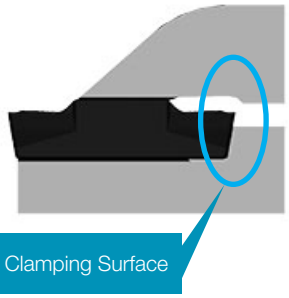

Fig.2

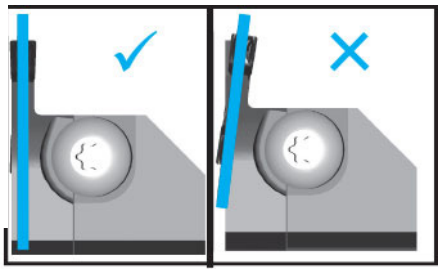

Fig.3

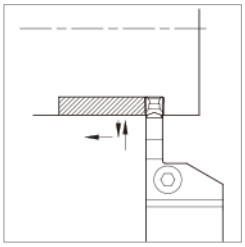
Guide for External Machining

Point (I)

1. Grooving Depths Over 0.5mm : At Roughing (**Fig.1**)
   Before traversing, pull the tool back about 0.1mm after grooving, instead of traversing subsequent to grooving.
   (Failure to pull the tool back before traverse cutting will result in an unbalanced load applied on only one side of the cutting edge.)

2. Grooving Depths Under 0.5mm : At Finishing (**Fig.2**)
   Traversing subsequent to grooving is possible because shallow groove depths relate a small load on the cutting edge.
   (Dwell-motion is not necessary)



Before traversing, pull the tool back about 0.1mm after grooving.
(Grooving depth over 0.5mm : At roughing)

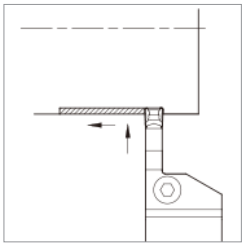
Fig.1

Point (II)

When widening the groove width, apply the "Step Turning" as shown in **Fig.3**

The widened groove and side walls should be finished last.
(For better chip control, D.O.C. over 0.5mm is recommended.)

Note: If the workpiece is not supported at the center, reduce the feed rate when grooving towards center



Traversing subsequent to grooving.
(Grooving depth under 0.5mm : At Finishing)

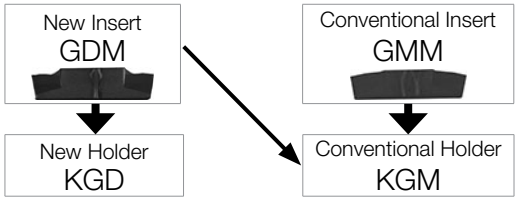
KGD • KGM Combinations

● **Insert Setting Angle of KGD / KGM Toolholders**

KGD...0°	Conventional Tools KGM...5°
	



Installing conventional inserts into the new toolholder is not recommended.

Features of KGD Series for Small Diameter

1 New Slit Design

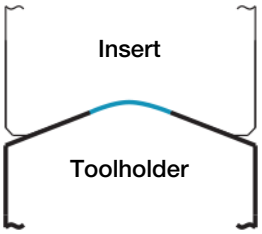
Front Side (insert side)

Back Side

Toolholder clamps insert equally and firmly

The insert clamping force is improved by firmly fastening the front side (insert side) of the toolholder.

2 Radial-Shaped Surface on Toolholder



The insert clamping force and installation are improved by increasing the contact area between the insert and toolholder.

★ : 1st Recommendation ☆ : 2nd Recommendation

Recommended Cutting Conditions (Feed Rate • D.O.C.)

(Workpiece Material : 1049)

Chipbreaker	Grooving	Traversing
	 ■ : Recommmended feed value	GM (General Purpose)		GL (Low Feed)		PH (High Feed Rate)		CM (Copying)		
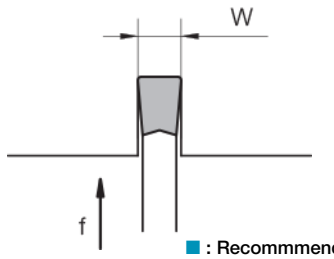
1) The above values reflect a T dimension that is 0.669" (17mm) or less.
2) If the toolholder is not for the 8mm width insert and its T dimension is over 0.669" (17mm), set the values for longitudinal turning to less than 90% of those above.

Recommended Cutting Conditions (Feed Rate • D.O.C.)

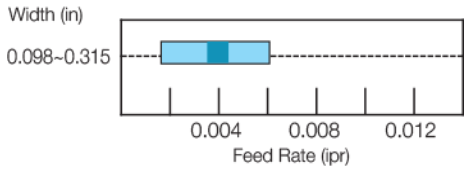
(Workpiece Material : 1049)

Chipbreaker — Grooving



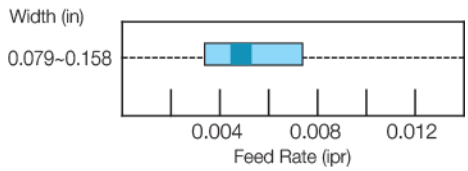
■ : Recommmended feed value

GS (Low Cutting Force)



※ When traversing, keep D.O.C. less than the Corner-R(rε)

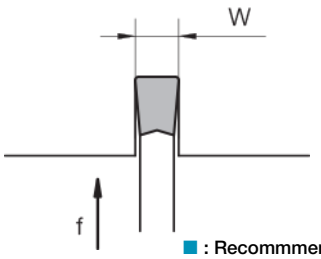
PM (Cut-Off)



1) The above values reflect a T dimension that is 0.669" (17mm) or less.

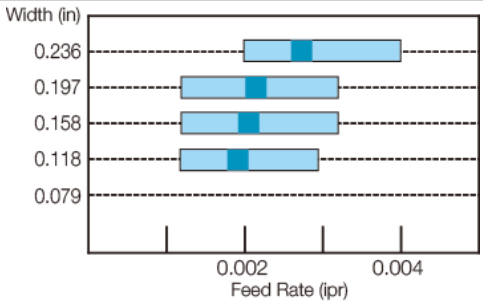
Recommended Cutting Conditions (Feed Rate)

Workpiece Material / Grade — Grooving

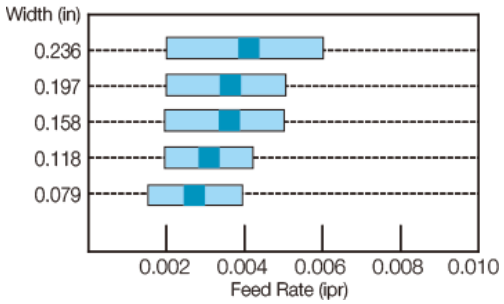


■ : Recommmended feed value

Hard Material — KBN05M



Powdered Steel — KBN570



Aluminum / Brass — KPD001

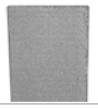
Multi-Function CERACUT
Plunge & Turn Chipbreakers

Name	Shape	Advantages
GMM...MW		Excellent chip evacuation during grooving, traversing, and cut-off
GMG...MG		Low cutting forces with ground chipbreaker
GMG...MS GMM...MS		Grooving, traversing and cut-off operations are minimum cutting forces with positive edge
GMM...MT		Small corner-R(rε) minimizes the core which remains in the center of the face
GMM...TK		Large corner-R(rε) with stable performance during cut-off
GMM...NB		Flat rake face without chipbreaker. Good performance for brass.

Edge Preparation

Edge Preparation	Chamfered + Honed Cutting Edge Corner-R(rε) 0.05	Chamfered + Honed Cutting Edge Sharp Edge
		Chipbreaker	**CR9025 / PR915**	**PR930 / KW10**
Edge Preparation	Chamfered + Honed Cutting Edge Corner-R(rε) 0.20~0.30	Sharp Edge Corner-R(rε) 0.20~0.30
		
Chipbreaker	**CR9025 / PR915**	**PR930 / KW10**
Edge Preparation	Honed Cutting Edge Corner-R(rε)	Sharp Edge Sharp Corner
		


Without Chipbreaker	**CR9025**	**PR930 / KW10**

• Sharp edge spec. can reduce cutting resistance 40% less than that of chamfer edge

★ : 1st Recommendation ☆ : 2nd Recommendation

Turning Conditions

① **KGM Toolholder**

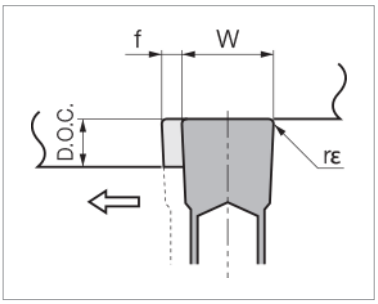
	Recommended Cutting Conditions	
D.O.C.(MAX) (in)	Under 80% of Edge Width	D.O.C.≤0.0315w
f(MAX) (ipr)	Under 10% of Edge Width	f≤0.0039w

• (D.O.C.) x (f) should not exceed 1/2 of D.O.C.(MAX) x f(MAX)

Load (in^2) \ Edge Width (in)	0.079"~0.098" (2.0~2.5mm)	0.118" (3.0mm)	0.158" (4.0mm)	0.197" (5.0mm)	0.236" (6.0mm)
D.O.C. x Feed Rate (f)	Under 0.008"	Under 0.014"	Under 0.025"	Under 0.039"	Under 0.057"

• D.O.C. x f ≤ ½ x 0.0315w x 0.0039w = $0.0016w^2$

② **KGM-T Toolholder** (Deep Grooving)
Use KGM-T toolholder under 90% lower cutting conditions than the KGM Toolholder

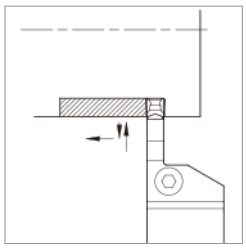


Guide for External Machining

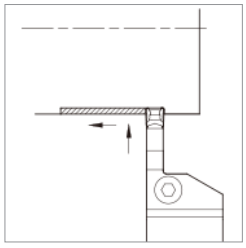
Point (I) (Turning After Grooving)

1. Grooving Depths Over 0.020" : At Roughing (**Fig.1**)
   Before traversing, pull the tool back about 0.004" after grooving, instead of traversing subsequent to grooving.
   (Failure to pull the tool back before traverse cutting will result in an unbalanced load applied on only one side of the cutting edge.)

2. Grooving Depths Under 0.020" : At Finishing (**Fig.2**)
   Traversing subsequent to grooving is possible because shallow groove depths relate a small load on the cutting edge.
   (Dwell-motion is not necessary)



Before traversing, pull the tool back about 0.004" after grooving.
(Grooving depth over 0.020" : At roughing)
Fig.1



Traversing subsequent to grooving.
(Grooving depth under 0.020" : At Finishing)
Fig.2

Point (II)

When widening the groove width, apply the "Step Turning" as shown in **Fig.3**

The widened groove and side walls should be finished last.
(For better chip control, D.O.C. over 0.020" is recommended.)

Note: If the workpiece is not supported at the center, reduce the feed rate when grooving towards center

CUT-OFF

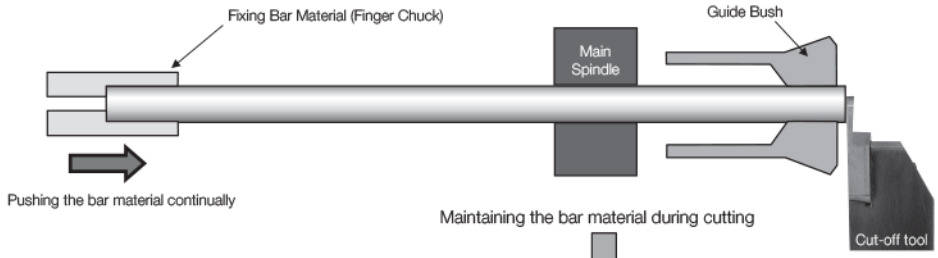
H1 - H26

Product Lineup

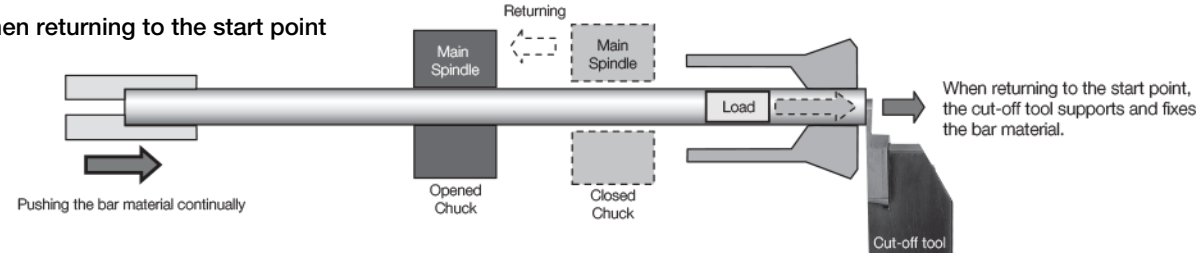
				Advantages
Small Diameter Cut-Off	**Toolholders** (Long Shank for Automatic Lathe) *Cut-Off Diameter* Ø0.197"~Ø0.472" ~Ø0.630" (Ø5mm~Ø12mm) (~Ø16mm)	**KTKF** (H8)  Width : (0.020"~0.079") Width : (0.5mm~2.0mm)		① Insert clamp is side screw type from lateral side ② 2-Edge Insert ③ Max. Cutting Dia. : Ø0.630" (Ø16mm)
	Automatic Lathe For Sub Spindle Tooling *Cut-Off Diameter* Ø0.236"~Ø0.472" Ø0.551"~Ø0.630" (Ø6mm~Ø12mm) (Ø14mm ~Ø16mm)	**KTKFS** (H10)  Width : (0.039"~0.079") Width : (1.0mm~2.0mm)		① Recommended for very small diameter workpieces, or when clearance between main and sub-spindle is very small ② 1-Edge and 2-Edge Inserts Available ③ Max. Cutting Dia. : Ø0.630" (Ø16mm)
KGD	**Bolt Clamp** Cut-Off Diameter Ø0.472"~Ø1.575" (Ø12mm~Ø40mm)	**KGD** (H16)  Width : (0.079"~0.158") Width : (2.0mm~4.0mm)		① Insert is clamped from top side ② 1-Edge and 2-Edge Inserts Available ③ Max. Cutting Dia. : Ø1.575" (Ø40mm)
CERACUT Plunge & Turn (2-edge Insert)	**Bolt Clamp** *Cut-Off Diameter* Ø0.709"~Ø1.575" (Ø18mm~Ø40mm)	**KGM** (H20) **KGM-T** (H21)  Width : 0.059"~0.158",0.118"~0.236" Width : 0.079"~0.197" Width : (1.5mm~4mm, 3mm~6mm) Width : (2mm~5mm)		① Insert is clamped from top side ② 1-Edge and 2-Edge inserts available ③ Max. Cutting Dia. : Ø1.575" (Ø40mm)
CERACUT Cut-Off (1-edge Insert)	**Toolholders** *Cut-Off Diameter* Ø1.181"~Ø2.441" (Ø30mm~Ø62mm)	**KTKH-S** (H24)  Width : (0.020"~0.079") Width : (0.5mm~2.0mm)		① Self-Clamping System Tap the insert lightly with a plastic hammer to set it in the pocket. ② 1-Edge Insert ③ Max. Cutting Dia. : Ø2.441" (Ø62mm)

Cut-Off in Automatic Lathe

1) When a cutting process has just finished



2) When returning to the start point

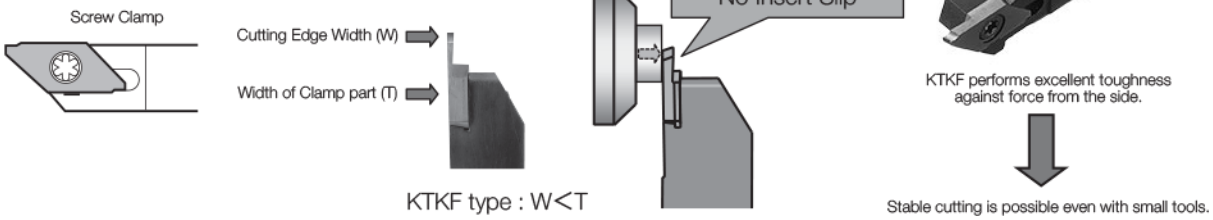


For high precision cutting, choose Screw Clamp toolholder.

1) Improved accuracy of cutting edge position in insert installation ➔ Higher precision even after repeated insert replacements

2) Improved rigidity of insert clamp ➔ Improved accuracy of insert and workpiece position

(KTKF Type)



How to Select Cut-Off Inserts

1) Use a neutral angle insert, when remaining boss is negligible. (See **Fig.1**)

2) Use an angled insert to reduce the remaining boss. (See **Fig.2**)

3) Use a sharp-edged insert with lead angle to minimize the remaining boss when cutting small parts and thin parts. (See **Fig.3**)

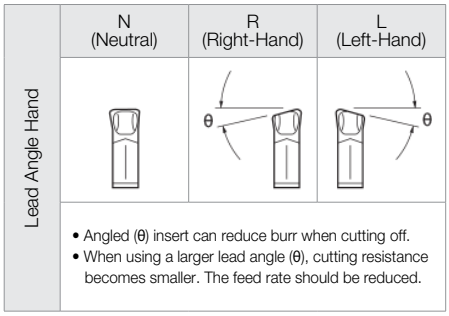


Fig.1

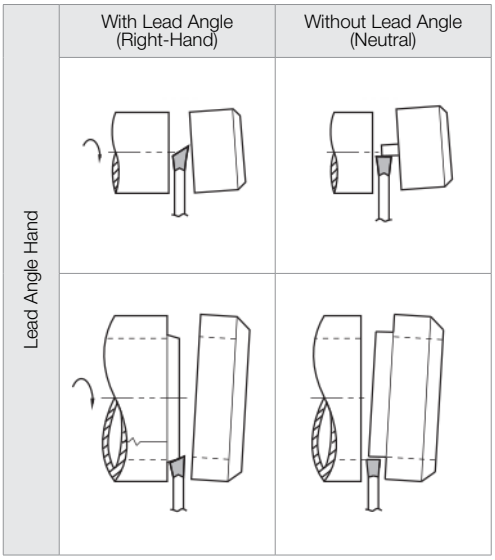

Fig.2

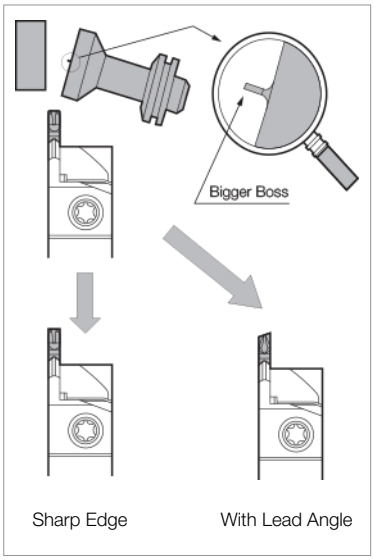

Fig.3

Caution

1) Set the cutting edge height 0.1-0.2mm above the center height
2) Always apply sufficient coolant to the cutting edge
3) Constant spindle revolution is recommended to obtain stable tool life
4) Cut-off as close to the chuck as possible
5) Decrease the feed rate from 1/2 to 1/3 at the near center to prevent chipping
• Overuse of insert and toolholder (blade) may cause insert breakage and toolholder (blade) damage. • Do not rework the insert and toolholder (blade) to prevent damge • Clean the insert pocket well with compressed air when replacing insert

- Dimension T shows the distance from the toolholder to the cutting edge.
- See Page ➡ H6~ ➡ H7 for actual cutting diameter.

Recommended Cutting Conditions ➡ H7

Note : Cutting diameter of -12 type toolholder (ØDmax) depends on the insert grooving width.

How to Use

1) When using main spindle only

Workpiece maximum ØD1 (**Fig.1**)=ØDmax
Even if the cutting edge runs beyond the center line, the insert does not contact the workpiece, since the workpiece falls off.
(The clearance between the insert and the workpiece is 0.2mm)

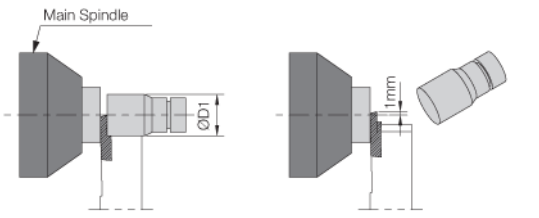

Fig.1 (When the edge is at the center)

Fig.2 (When the edge is 1mm beyond the center)

(Customer Service) 800.823.7284 - Option 1
(Technical Support) 800.823.7284 - Option 2
Visit us online at KyoceraPrecisionTools.com

U.S. Stock Standard : ●
World Express (Shipping: 7-10 Business Days) : ○

2) When using both Main and Sub spindles

In this case, when the cutting edge runs beyond the center line, the insert will contact the workpiece, since the workpiece does not fall off.
Therefore the programmed distance beyond the center must be considered.
e.g. When the cutting edge is programmed to run 1mm beyond the center.
Workpiece maximum, ØD2 (**Fig.4**) = [ØDmax - 1mm×2] (mm)
(The clearance between the insert and the workpiece is 0.2mm)

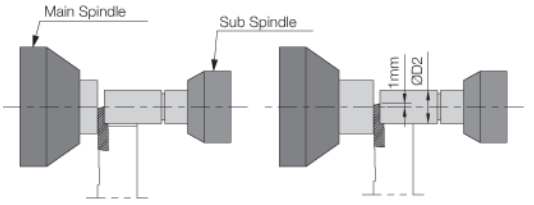

Fig.3 (When the edge is at the center)

Fig.4 (When the edge is 1mm beyond the center)

Tough Edge Type T Chipbreaker

Fracture Resistance Comparison (Interrupted Machining)

Tough Edge Type T Chipbreaker (PR1225) 3,000 Passes	Competitor A 700 Passes	Competitor B 3,000 Passes
	 Fracture of Corner	 Fracture of Corner

	1,000 Passes	2,000 Passes	3,000 Passes
Tough Edge Type T Chipbreaker (PR1225)	→	→	→
Competitor A	→ X		
Competitor B	→	→	→ X

Compared to Competitor A and B, Tough Edge "T Chipbreaker" achieves superior fracture resistance during interrupted cutting

• Dimension T shows the distance from the toolholder to the cutting edge.

Recommended Cutting Conditions ➡ **H11**

※ Only Right-hand is available for L4 dimension

TKFS (ØDmax)

Insert (Right-handed Insert Shown)	Part Number	Dimensions (mm) W inch	W mm	ØD Max
	TKFS12□ 100-S	0.039	1.0	6
	150-S	0.059	1.5	9
	200-S	0.079	2.0	12
	TKFS16□ 150-S	0.059	1.5	14
	200-S	0.079	2.0	16

As **Fig.2** shows, the cutting diameter of the insert is indicated when the top of the cutting edge progresses 1mm from the center

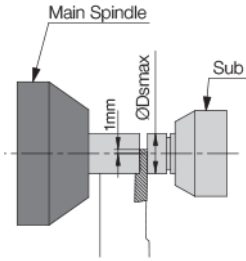

Fig.1

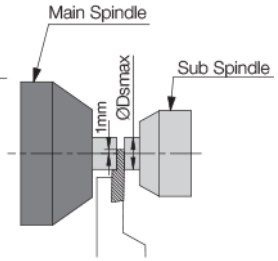

Fig.2

• As **Fig.1** shows, use KTKFL (Left-hand) when the distance between main spindle and sub spindle are long.

• As **Fig.2** shows, KTKFS is recommended when the workpiece diameters are small and the distance between the main spindle and sub spindle are short

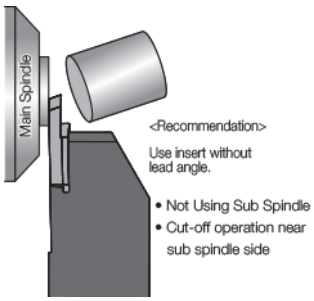
How to Use Small Diameter Cut-Off Tool

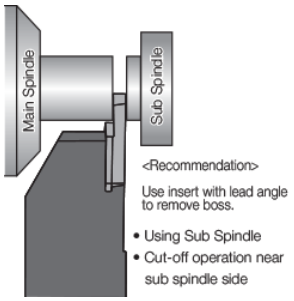
KTKF

• Both Right-hand and Left-hand types are applicable to gang tool post
• Left-hand type is used at cut-off operation using sub spindle

KTKFR Right-Hand Toolholder



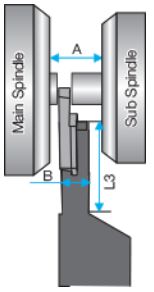
KTKFL Left-Hand Toolholder



KTKFS

• When machining workpiece with small diameter, use KTKFS to reduce overhang distance from the main spindle

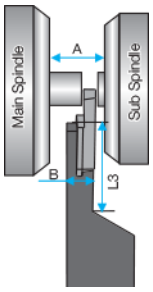
KTKFSR Right-Hand Toolholder



<How to Select> R-Hand
• Long workpiece and more rigidity
• Cut-off operation near main spindle side

L3 Dimension
• Sub Spindle Dia.
Ø40mm→22 (A type)
Ø50mm→26 (B type)

KTKFSL Left-Hand Toolholder



<How to Select> L-Hand
• Short workpiece and less rigidity
• Cut-off operation near main spindle side

L3 Dimension
• Sub Spindle Dia.
Ø40mm→22 (A type)
Ø50mm→26 (B type)

Inserts are sold in 10 piece boxes

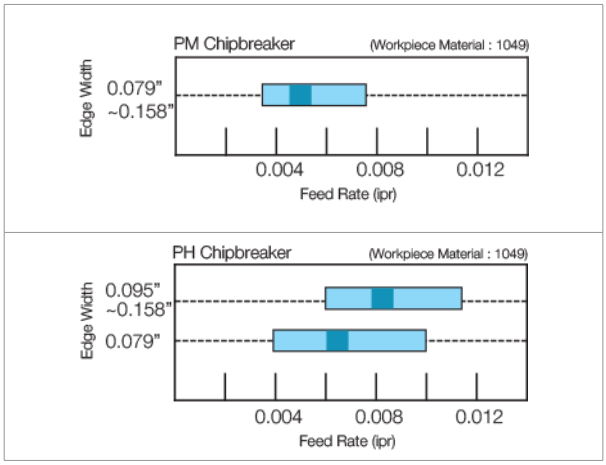
Feed Examples



■ : Indicates the center value of feed (f)

CAUTION During Cut-Off

1) Be sure to perform wet processing. Apply enough coolant to the cutting edge

2) Keep spindle revolution constant during processing to achieve longer tool life

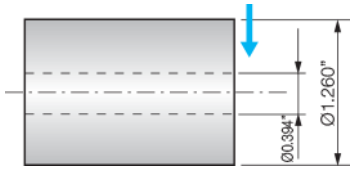
3) Cut off as close to the chuck as possible

4) Reduce feed rate by 30-50% when closing in on the center of the workpiece to prevent impact

Case Studies

1045 (Cut-Off)

- Sleeve
- Vc=100 m/min
- f=0.12 mm/rev
- WET
- GDM3020N-025PM(PR1225)
- KGDL2020K-3T20



PM Chipbreaker (PR1225)	250 pcs/edge capable of further machining
Competitor A (PVD Coated Carbide)	250 pcs/edge with chipping

Results:

- KGD-type and PM chipbreaker (PR1225) showed good edge condition after maching same number of workpieces as Comp. A.
- Available for further machining. (Comp. A caused chipping)

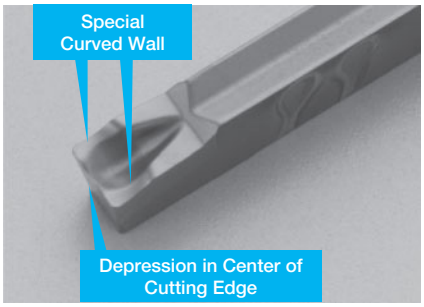
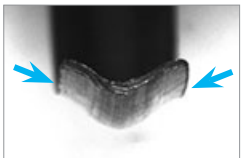
• Sharp Edge can reduce cutting resistance by 40%, compared with chamfered edge

Name	Advantages
GMM-MT	Specific chipbreaker for cut-off operations requiring sharp cutting performance Minimizes the boss
GMM-NB	Cutting edge is flat with no chipbreaker. Good performance for brass, etc.
GMM-TK	Stable design with chipbreaker for cut-off. Large corner-R 2-edge for economical performance
GMN-TK	Same chipbreaker geometry as GMM-TK 1-edge. Wide application range.
GMN (Std.)	Mainly for deep grooving, but available for groove widening and turning due to projection near side cutting edge. 1-edge and wide application range. Available for cut-off applications.

TMR Chipbreaker

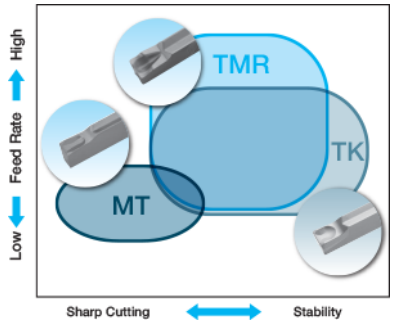
Chipbreaker Advantages





Chip Width < Grooving Width

GMM Chipbreaker Map



The TMR Chipbreaker Provides Stable Chip Control at High Feed Rates

Good chip control even when cutting speed (spindle revolution) is increased

(Cutting Conditions : 15CrMo4, Ø30, Constant Spindle Revolution)

Part Number	n=1060min^{-1}(Vc=325sfm)		n=2123min^{-1}(Vc=650sfm)	
	f=0.0008ipr	f=0.0047ipr	f=0.0008ipr	f=0.0047ipr
GMM 3020-TMR (Neutral)				GMM 3020R-TMR-6D (Right-Hand)				

Recommended Cutting Conditions

Workpiece Material	Vc (sfm)	Feed Rate (ipr)
Carbon Steel	200~650	0.003~0.007
Alloy Steel	200~500	
Stainless Steel	175~450	

Workpiece Surface Roughness

TMR Chipbreaker provides good surface roughness on the workpiece end face at high feed rate ranges.

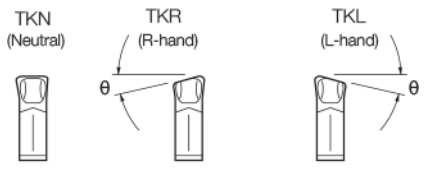
Name	Chipbreaker		Advantages
General Cut-Off	Standard (No Indication)		General cut-off type for feed rates over 0.004ipr Superior chip evacuation
Low Feed Cut-Off	P		Chipbreaker specially designed for low feed machining on automatic lathes, etc. Chips are controlled at feed rates between 0.0012~0.0032ipr

Insert's Edge Shape (CERACUT Cut-Off)

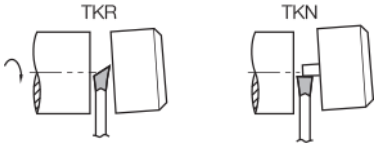
	Chamfered + Honed	Sharp Edge	Honed Cutting Edge
Edge Preparation			
Standard Chipbreaker	TN90 CR9025 / PR660	PR930 / KW10	-
P-Chipbreaker	-	-	TN90 / CR9025 PR660 / PR930 / KW10

• Sharp edge can reduce cutting resistance by 40%, compared with chamfered edge.

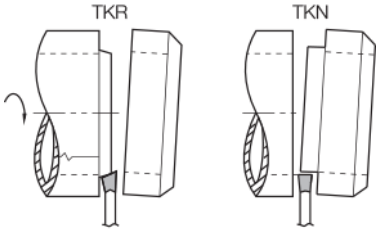
How to Select Chipbreakers



• Angled (θ), insert can reduce burr when cutting off.
• When using a larger lead angle (θ), cutting resistance becomes smaller. The feed rate should be reduced.



Solid Workpiece



Hollow Workpiece (Pipe)

Inserts are sold in 10 piece boxes

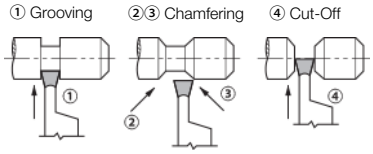
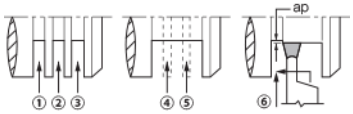
Usage Example of Cut-Off

1. Cut-Off after chamfering



2. Wide Grooving

① ~ ⑤ Groove Widening
⑥ Traverse Finishing
(Value of ap shall be under the value of Corner-R)



In order to prevent both corners' unequal wear

● : U.S. Stock Standard
○ : World Express (Shipping: 7-10 Business Days)

Setup (TKN / TK型)

1. Tap the insert lightly with a plastic hammer to push it tight enough that it cannot be removed by hand. **(Fig.1)**
2. Remove the insert with the supplied wrench. **(Fig.2)**

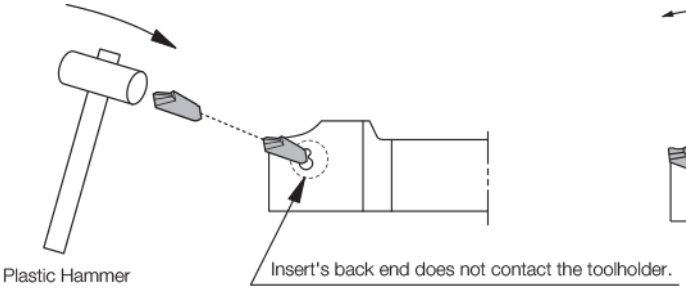


Fig.1 How to Attach Inserts

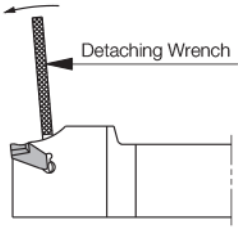

Fig.2 How to Detach Inserts

KTKF J6

Threading Insert Lineup

"JX" Toolholders (overall length 4.75") are available!

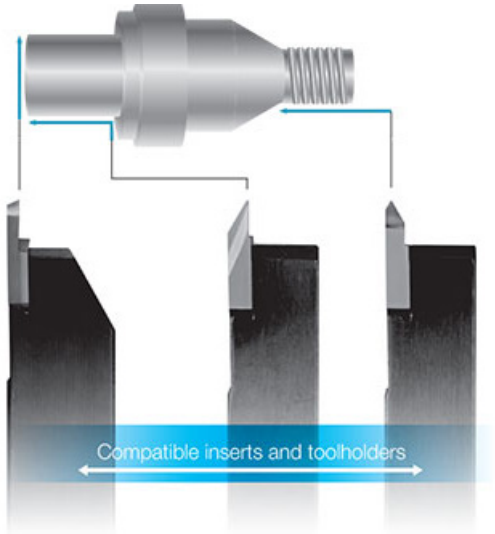
Threading

For Threading

TKFT

- **Applicable for various types of threading**

Metric (M)	Parallel Pipe [G(PF)]
Unified (UN)	Tapered Pipe [R(PT), (BSPT)]

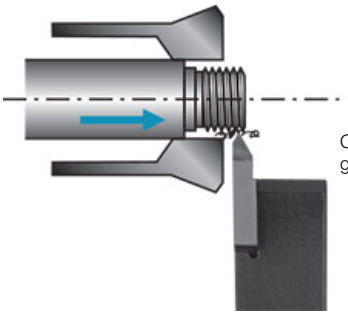


Small Parts Cut-Off	Back Turning	Threading
TKF	**TKFB**	**TKFT**

KTKF How to use the Goose-neck Holder on automatic lathe (guide bushing system)

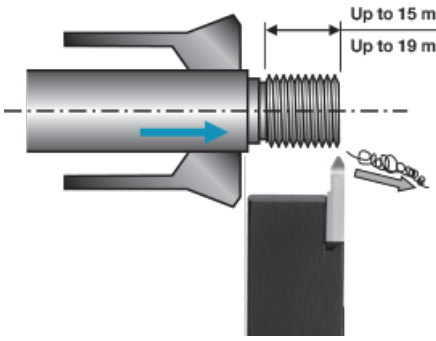
Goose-neck Holder is applicable to automatic lathes whose toolholder does not move in longitudinal direction (Z-axis)

- **Conventional Threading Tool**



Chips may interfere with guide bushing.

- **Goose-neck Holder (for Threading)**



Goose-neck Holder is available for threading without returning tread part into guide bush. (Thread length 15mm / 19mm)

- **Goose-neck Holder Precautions**

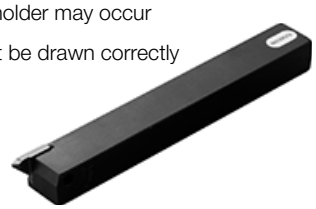
When Using Goose-neck Holder,

① Be careful of interference with back spindle because offset dimension is larger than the conventional toolholders

② Be careful of interference with sub spindle. Toolholder installation position is limited

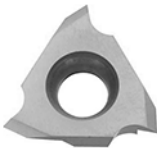
③ During simultaneous machining (balance cut and tool approach for next process), interference with other toolholder may occur

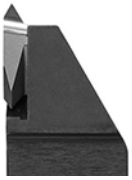
④ In some cases, such as specifying toolholder shape on NC display or using CAM, Goose-neck Holder can not be drawn correctly

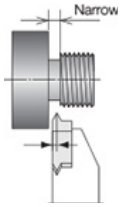


TTX Advantages

- Least Cutting Resistance
- Thread to Shoulder (less dead space)
- 3-Edge

Shape	On Toolholder	Dead Space
		






TF Series Threading Inserts

High quality edge and new grade insert PR1115 achieve long tool life

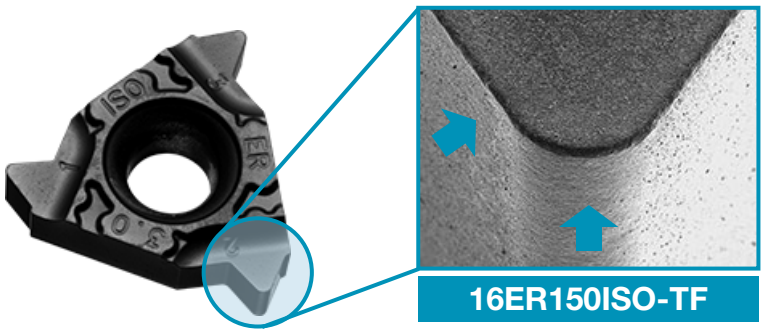
Economical Molding Specification

High Quality Cutting Edge

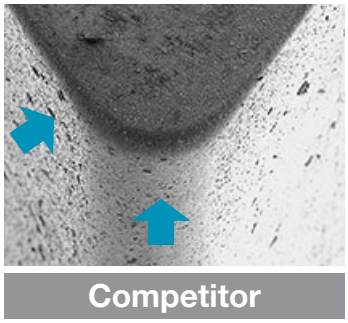
TF Series

- **High precision fine molding technology produces high quality cutting edge**

Consistent micro honing technology produces high quality cutting edge



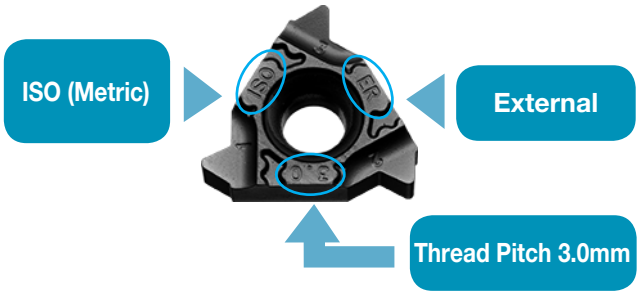
Inconsistent edge honing condition



Available for every standard screw thread

Metric (M)	Tapered Pipe [R, Rc(PT), (BSPT)]
Unified (UN)	60°Angle (Partial Profile)
Parallel Pipe [G(PF)]	55°Angle (Partial Profile)
Whitworth [W]	

Clear markings provide user-friendly insert identification



- 16..-TF has the mark on its top face, and 11..-TF has the mark on its seating face side (bottom side)

Threading Insert Features

Full Profile and Partial Profile

	Shape	Function	Advantages
Full Profile			① Burr-free thread surface; high quality (smooth feeling) ② Leave the workpiece diameter slightly oversized for full topping ③ Every pitch size requires a specific insert
Partial Profile			① Threads crest tends to be sharp edged ② Thread's O.D. or I.D. needs to be finished to the size before threading ③ One insert can machine to various pitch sizes

Thread Precision

Thread Type		Thread Precision: Strict ← → Loose		
Metric	External Threading	4h (1st Class)	6g (2nd Class)	8g (3rd Class)
	Internal Threading	5h (1st Class)	6h (2nd Class)	7h (3rd Class)
Unified	External Threading	3A	2A	1A
	Internal Threading	3B	2B	1B
Applicable Accuracy with Wiper Edge		※X	✓	✓

※ Not recommended if strict thread precision is required

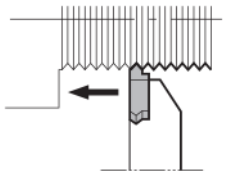
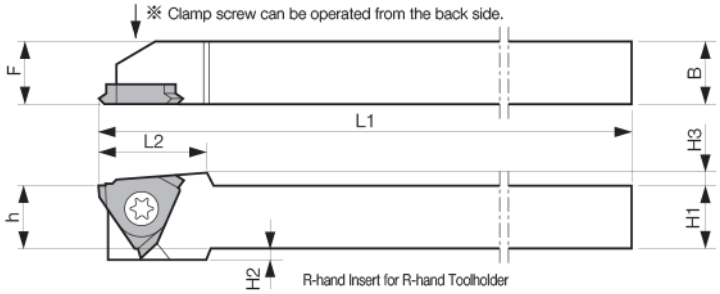
TKFT How to use the Goose-neck Holder on automatic lathe (guide bushing system) See J4

Goose-neck Holder is applicable to automatic lathes whose toolholder does not move in longitudinal direction (Z-axis diretion)

KTTX External Threading Toolholders [TTX Inset]



• Thread to shoulder



• Right-hand shown

• Right-hand Insert for Right-hand Toolholder, Left-hand Insert for Left-hand Toolholder

★ : 1st Recommendation ☆ : 2nd Recommendation
- Coolant is recommended.
- When using cermet inserts if edge chipping occurs lightly hone cutting edge with diamond file.
- For stainless steel threading, please set smaller intial D.O.C. and two or three more passes than threading for carbon steel.

PR930/PR1115 Threading Inserts are sold in 5 piece boxes. *All other grade Inserts are sold in 10 piece boxes.*

- Choose sleeves (Ød1) to meet with ØD dimension of EZG bars.
- Adjustment pin cannot be installed in EZH-ST sleeves. To adjust overhang of EZB insert, please use EZH-HP sleeves.
- Machine manufacturers in random order.

Recommended Cutting Conditions

Workpiece Material	Recommended Insert Grade (Vc sfm)
	MEGACOAT
	PR1225
Carbon Steel/Alloy Steel	★ 330-1070
Stainless Steel	★ 330-820
Non-ferrous Metals	-

★ : 1st Recommendation ☆ : 2nd Recommendation

Note:
1) The standard cutting speed is Vc (sfm) = 100-175. The table feed may not follow the expected conditions when machining small diameter workpieces at high speeds.
2) Coolant is recommended.

Application of Parallel Pipe and Tapered Pipe Thread

Parallel Pipe: G (PF), Rp (PS)

Applicable Thread		TPI	Internal Threading (G, Rp)		Min. Bore Dia. (mm)	Same Root's Radius
Inch	Symbol Previous Symbol		Insert			
-	G 1/16 (-)	28	**EZTR**	**06005-55-008**	6.56	0.12
'1/8	G 1/8 (PF 1/8)	28		**08007-55-008**	8.57	0.12
'2/8	G 1/4 (PF 1/4)	19	**EZTR**	**08007-55-008**	11.45	0.18
'3/8	G 3/8 (PF 3/8)	19		**08007-55-008**	14.95	0.18

Tapered Pipe: R, Rc (PT) (BSPT)

Applicable Thread		TPI	Internal Threading (Rc)		Min. Bore Dia. (mm)	Same Root's Radius
Inch	Symbol Previous Symbol		Insert			
-	R 1/16, Rc 1/16 (-)	28	**EZTR**	**06005-55-008**	-	0.12
'1/8	R 1/8, Rc 1/8 (PT 1/8)	28		**08007-55-008**	-	0.12
'2/8	R 1/4, Rc 1/4 (PT 1/4)	19	**EZTR**	**08007-55-008**	-	0.18
'3/8	R 3/8, Rc 3/8 (PT 3/8)	19		**08007-55-008**	-	0.18

• When using "EZT type" for Parallel Pipe / Tapered Pipe threading, the thread's corners become sharp edged due to its partial profile, and the shape will not be the same as the standard shape for Parallel Pipe / Tapered Pipe.

Application for NPT

Recommended Cutting Conditions

Workpiece Material	Recommended Insert Grade (Vc sfm)	
	PVD Coated Carbide	Carbide
	PR930	KW10
Carbon Steel/Alloy Steel	★ 100-330	-
Stainless Steel	★ 100-260	-
Non-ferrous Metals	-	★ -980

★ : 1st Recommendation ☆ : 2nd Recommendation

Note:
1) The standard cutting speed is Vc (sfm) = 100-160. The table feed may not follow the expected conditions when machining small diameter workpieces at high speeds.
2) Coolant is recommended.

16 ① E ② R ③ A60 ④ -TF ⑤

① Insert Size	
06	3.970
08	4.760
11	6.350
16	9.525
Symbol	I.C. Size (mm)

② External / Internal	
E	External Threading
I	Internal Threading

③ Insert Hand	
R	Right hand
L	Left hand

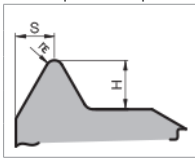
④ Pitch		
60°	A60	60° Angle (Partial Profile)
		0.50mm~1.50mm
60°	G60	60° Angle (Partial Profile)
		1.75mm~3.00mm
60°	AG60	60° Angle (Partial Profile)
		0.50mm~3.00mm
55°	A55	55° Angle (Partial Profile)
		40~16 TPI
55°	G55	55° Angle (Partial Profile)
		14~8 TPI
55°	AG55	55° Angle (Partial Profile)
		40~8 TPI
Vertex angle		Partial Profile

④ Pitch		
60°	6001	60° Angle (Partial Profile) R Corner-R (rε)=0.10mm
		1.00mm~2.50mm
55°	5501	55° Angle (Partial Profile) R Corner-R (rε)=0.10mm
		28~11 TPI
Vertex angle		Partial Profile

⑤ Optional Code	
-TF	TF Cutting Edge

Note: Pitch and threads per inch of an insert without wiper depend on the size of insert.

• Example of shape of A, G and AG



Part Number	Dimensions (mm) rε	S	H
16ER A60-TF	0.06	1.00	1.50
16ER G60-TF	0.22	1.60	2.60
16ER AG60-TF	0.06	1.60	2.70

Corner-R (rε) Selection for Partial Profiling Inserts

	External Threading	Internal Threading
External Threading	rε≦0.1443P	rε≦0.0720P
Parallel Pipe Whitworth Tapered Pipe	For Both External and Internal Thread rε≦0.1373P	

• Metric, Unified Thread
Corner-R (rε) at Internal Threading is almost half of that of External.

• Parallel Pipe, Tapered Pipe, Whitworth Thread
Same Corner-R (rε) for both External and Internal Threading.

rε : Corner-R P : Pitch (= 25.4/n) n : TPI

PR1115/GW15 Threading Inserts are sold in 5 piece boxes.

All other grade inserts are sold in 10 piece boxes.

Guide for Internal Threading

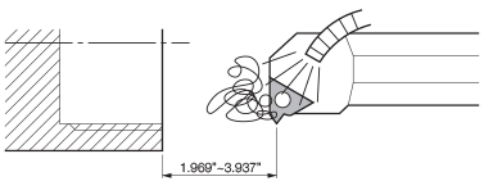
For internal threading, pay extra attention to "Stabilizing diameters of pre-drilled holes"and "chip evacuation".

1. Stabilizing diameters of pre-drilled holes
   Because small pitch internal threads have a small corner radius any variation in the diameter of pre drilled holes will greatly affect the tool life of the insert. Please minimize any variation of pre drilled holes and add an air pass to the first thread pass for safety.

2. Chip evacuation
   If the threading cycle continues whith chips tangled on the holder or in the part it may damage the insert. We suggest starting each thread pass at least 2" from the part to allow room for the coolant to remove chips from the tool on each pass.

< 1 When running the first part of a setup>
Run the program in single block to make sure coolant can remove the chips from the tool after each threading pass.

< 2 When running the second part of a setup>
Run through the full threading cycle and again check that chips are removed from the tool before going into production.



KTN / KTNS / SIN

Workpiece Material	Recommended Insert Grade (Vc sfm)

Initial D.O.C. (Radial)	-	-	-	0.0118" or less
Aluminum	-	-	-	★ 150~400
Initial D.O.C. (Radial)	-	-	-	0.0118" or less
Brass	-	-	-	★ 150~300
Initial D.O.C. (Radial)	-	-	-	0.0118" or less

° For 06IR/08IR, please lower it to a figure under 40% of above conditions.

★ : 1st Recommendation ☆ : 2nd Recommendation
- Coolant is recommended.
- When using cermet inserts if edge chipping occurs lightly hone cutting edge with diamond file.
- For stainless steel threading, please set smaller intial D.O.C. and two or three more passes than threading for carbon steel.

Lead Angle of Thread

Thread's Lead Angle β as shown in Fig. 1 decides from the Work Diameter (Pitch Dia.) "D" and Lead "L"(in case of Single-start Thread, it is the same as Pitch "P"). Rolling a right-angled Triangle around a Cylinder and the Angle ACB in Fig. 2 becomes the Lead Angle β. The Calculation Formula is shown as follows.

$$\tan\beta = \frac{L}{DD} = \frac{nP}{\pi D}$$

[β: Lead Angle D: Pitch Dia. n: Number of Thread (such as double-start thread) P: Pitch
L: Lead (In case of single-start thread, it is equal to P. In case of n-start thread, it is equal to nxP)]

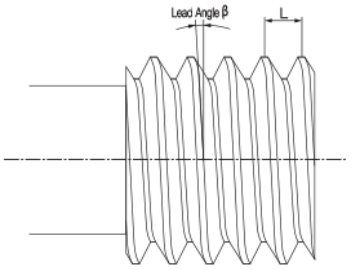

Fig. 1

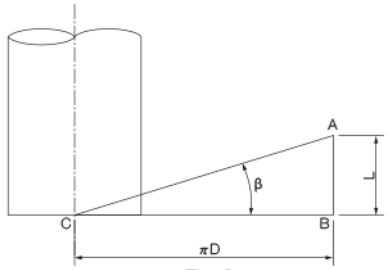

Fig. 2

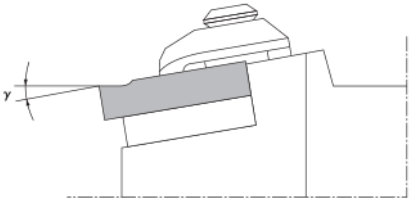

Fig. 3

Relief Angle of Thread

Against this Lead Angle, the Threading Insert needs Side Relief Angle α. TNN type Threading Insert is a negative Insert and it does not prepare the Relief Angle originally. But when installing the Insert on the Toolholder, the Edge Inclination Angle 3 is prepared as shown in Fig. 3, and it generates both the front Relief Angle and the Side Relief Angle α. This Side Relief Angle is obtained by the Formula as follows. (See Fig. 4)

$$\tan\alpha = \tan\gamma \times \tan\left(\frac{\theta}{2}\right)$$

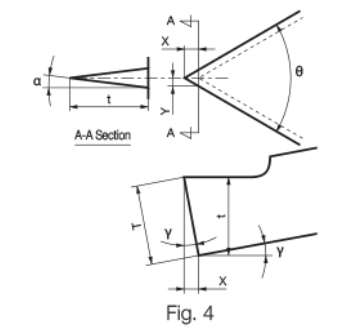

Fig. 4

Symbol	e.g.)
α: Side Relief Angle	
γ: Inclination Angle after Installing Insert	External Insert : 10° Internal Insert : 15°
θ: Insert's Thread Angle	Metric : 60° Tapered Pipe : 55° 30° Trapezoidal : 30°
T: Insert Thickness	

$$\begin{cases} X = T\sin\gamma \\ Y = X\tan(\theta/2) = t\tan\alpha \\ t = T\cos\gamma \end{cases}$$

Table 1

Inserts	Side Relief Angle α	
	External	Internal
60° Thread (M, UN, NPT)	5° 49′	8° 47′
55° Thread (W, G, PT)	5° 14′	7° 56′
30°Trapezoidal (Tr)	2° 43′	5° 7′

See table 1 for the Side Relief Angle depending on the insert.
However, the Side Relief Angle for 1°is set by the toolholder itself, and the actual Side Relief Angle becomes α + 1°.

<How to use>

1) Select the insert with suitable corner-R (rε) determined by the pitch.
2) Do not exceed 0.0118" for the 1st D.O.C.
3) Final D.O.C. for Finishing shall be 0.0008" - 0.0020".
4) Pre chamfer thread diameter to thread minor diameter to improve insert life.
5) Coolant is recommended.

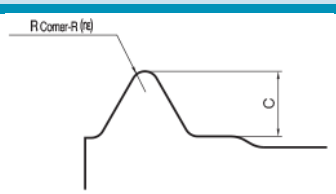
TTX Type

Suitable for threading to the shoulder.

Insert Part Number \ Thread Type		Metric (mm)	Unified TPI	Parallel Pipe TPI	Whitworth TPI
TTX32R	6000	0.5~1.0	56~32	-	-
	60005	0.5~1.0	48~32	-	-
	6001	1.0~2.0	28~14	-	-
TTX32R	6000S	0.5	56~48	-	-
	60005S	0.5	48	-	-
TTX32R	5501	-	-	28~19	24~20
	55015	-	-	19~11	20~14

◆ Usage caution for Full Profile insert.

1) Max.ap is based on the value of C+0.0020"-C+0.0031".
2) Final D.O.C. for Finishing shall be 0.0008"-0.0020".
3) Pre chamfer thread diameter to thread minor diameter to improve insert life.
4) Coolant is recommended.



(D.O.C. shows the value of radial D.O.C.)

Corner-R (rε) Selection for Partial Profiling Inserts

	External Threading	Internal Threading
Metric Unified	rε ≦0.1443P	rε ≦0.0720P
Parallel Pipe Whitworth Tapered Pipe	For Both External and Internal Thread rε ≦0.1373P	

• Metric, Unified Thread

Corner-R (rε) at Internal Threading is almost half of that of External.

• Parallel Pipe, Tapered Pipe, Whitworth Thread

Same Corner-R (rε) for both External and Internal Threading.

rε : Corner-R P : Pitch ($= \frac{25.4}{n}$) n : TPI

11 / 16 Type 60°/ 55° (Partial Profile)

(D.O.C. shows the value of radial D.O.C.)

<How to use>

1) Select the insert with suitable corner-R(rε) determined by the pitch.
2) Do not exceed 0.0118" for the 1st D.O.C.
3) Final D.O.C. for Finishing shall be 0.0008" - 0.0020".
4) Pre chamfer thread diameter to thread minor diameter to improve insert life.
5) Coolant is recommended.

The standard specification of the inch size thread is based on the dimension of 1/8".

In Applicable Toolholders and Inserts Lists on J34~J37, Right-hand Insert / Right-hand Toolholder descriptions are listed based on the previous TNN type inserts.
For other applicable inserts / toolholders or stock availability of Left-hand, see each relevant page and J40.

1) The largest toolholder available for the minimum bore dia. is recommended for the female threading in these tables.
Then, the toolholder whose min. bore dia. is smaller than the recommended toolholder can be used for threading
2) When using "Partial Profile" for Tapered Pipe threading, thread's corners become sharp edged, and the shape will not be the same as the standard shape for Tapered Pipe.

• Application of NPTF Thread
NPTF is the thread for sealing pipes without using any sealing material.
Thread symbol is similar to NPT but the Tolerance is different from that of NPT and the above Inserts are not available to NPTF.

30° Trapezoidal

The JIS Standard Trapezoidal Size to be machined by TNN Insert are shown.

Applicable Thread	Pitch (mm)	External Threading			Internal Threading			Min. Bore Dia.(mm)

• Use Inserts with Partial Profile.

Infeed Methods

Infeed Methods	Features
 Radial Infeed	• The cutting edge moves toward the center of the workpiece every pass. • Suitable for relatively small pitch size threading. • V-shape chips are generated and chip control may be difficult depending on workpiece material. • Chips prevent coolant from reaching tool tip causing poor tool life.
 Flank Infeed	• Used for large pitch size threading. • No DOC on right side of the figure causes insert wear and on materials that work harden will cause hardening of this surface. • Chips flow to one side.
 Flank Compound Infeed	• Recommended method to reduce work hardening and improve insert life. • 3-5 degrees for steel and up to 12 degrees for stainless materials. • Chips flow to one side allowing coolant to reach insert tip. • This method is recommended to threading by 2-thread insert.

h6 Shank Dia. — Shank Diameter Tolerance is h6.

Super Micro-Grain Carbide

The products made from super micro-grain cemented carbide

See our large selection of solid end mills in our Solid Round Tools Catalog

Substrate of all solid end mills is carbide **Carbide Material**

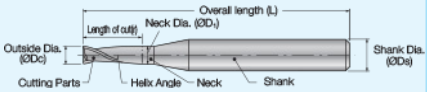
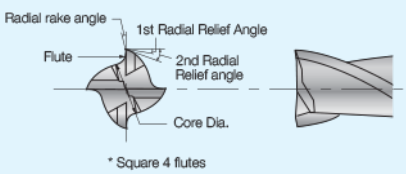
● Square Type

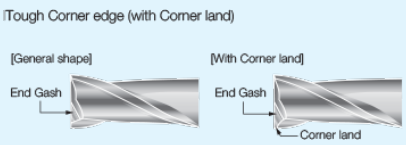


Cutting parts shape

● Edge Shape



● with Chamfered Edge



Core Diameter Ratio (%)=(Core Diameter / Outside Diameter)X100

Introduction

Surface finish oriented

L5~L9

F Series — MEGACOAT is applied

(FES)

The MEGACOAT coating and a sharp cutting edge enable high precision finishing due to excellent wear resistance and heat-resistance.
Total lengths of 35mm and 45mm are available for automatic lathes.

L5~L9

High efficiency chip evacuation

L10~L11

Z Series — MEGACOAT is applied

(3ZEKS)

Multi-functional, high efficiency endmill
Applicable for plunge milling, slotting and finishing with one end mill.
Smooth chip evacuation resulting from the sub-groove on the gash breaks chips during plunge milling

L10-L11

New PVD technology, MEGACOAT

MEGACOAT for High Precision Finishing

MEGACOAT enables high precision finishing with a sharp cutting edge.

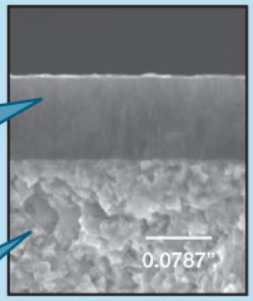
F Series
L10~L14

● Wear and high heat resistance

MEGACOAT
Nitride solid solution metal with a high melting point
High hardness with oxidation resistance
Smooth surface

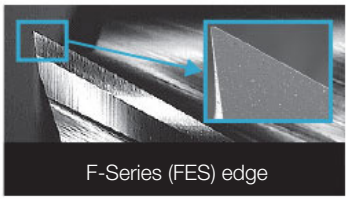
● Fracture resistance with stable cutting

Super Micro-grain cemented carbide



High Quality, Sharp Edge

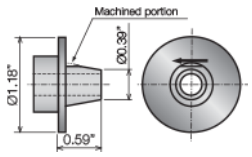
●Smooth surface quality



Case Studies

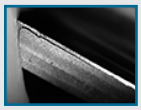
Free Cutting Carbon Steel

· OA parts
· Vc=289 sfm (n=3,500min⁻¹)
· ap=0.0197"
· fz=0.0091 ipt (Vf=126.0 ipm)
· Wet
· 4FESM080-190-08

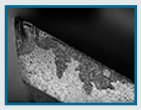


MEGACOAT	230 pcs/edge	
Competitor Coated Carbide E		100 pcs/edge

· Kyocera showed 2.3 times longer tool life than Competitor E.
· Kyocera's new coating technology resolved edge fracturing and provided stability compared with Competitor E.
· Kyocera showed superior finished surface compared with Competitor E.



MEGACOAT
(Number of workpiece processed: 230 pcs/edge)

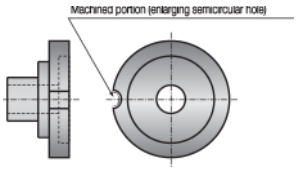


Competitor Coated Carbide E
(Number of workpiece processed: 100 pcs/edge)

(Customer Evaluation)

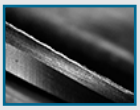
Chromium Steel

· Automotive parts
· Vc=131 sfm (n=3,200min⁻¹)
· ap=0.0039"
· fz=0.0004 ipt (Vf=2.8 ipm)
· Wet
· 2FESM040-110-06



MEGACOAT	700 pcs/edge	
Competitor Coated Carbide F		350 pcs/edge

· Kyocera processed twice as many workpieces compared to Competitor F.
· Competitor F is limited to 350 workpieces due to excessive wear.
· Kyocera prevents chipping there by enabling long-life and stabilized machining.



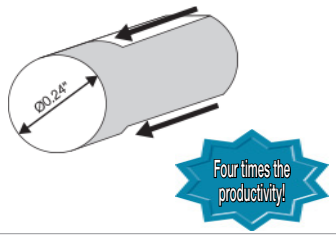
MEGACOAT
(Number of workpiece processed: 700 pcs/edge)

Competitor Coated Carbide F
(Number of workpiece processed: 350 pcs/edge)

(Customer Evaluation)

Carbon Steel

· Machine parts
· Vc=328 sfm (n=3,980min⁻¹)
· ap=0.0177"
· fz=0.0020 ipt (Vf=31.5 ipm)
· Wet
· 4 flutes
· Tool life 4000 pcs/edge
· 4FESW080-080-08



4FESW080-080-08	Table feed	Vf=31.5 ipm
Competitor Coated Carbide G	Table feed Vf=7.9 ipm	

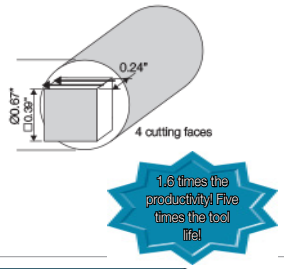
[Competitor Coated Carbide G]
Ø8·4 flutes
Vc=207 sfm (n=2508min⁻¹)
ap=0.0177"
Tool life 4000 pcs/edge
fz=0.0008 ipt (Vf=7.9 ipm)

User comments:
· Was able to increase both cutting speed and table feed rate.
· Despite the increase in machining conditions, burr formation decreased.

(Customer Evaluation)

Free Cutting Carbon Steel

· Machine parts
· Vc=328 sfm (n=3,200min⁻¹)
· ap x ae=0.1378" × 0.1181"
· fz=0.0020 ipt (Vf=25.2 ipm)
· Wet
· 4 flutes
· 4FESW100-080-10



4FESW100-080-10	Table feed	Vf=25.2 ipm
Competitor Coated Carbide H	Table feed Vf=15.7 ipm	

[Competitor Coated Carbide H]
Ø7·4 flutes
Vc=144 sfm (n=2000min⁻¹)
ap × ae=0.1378" × 0.1181"
fz=0.0020 ipt (Vf=15.7 ipm)

User comments:
· Automatic general purpose end mills have a shorter edge length with improved rigidity, which enabled an increase from conventional Ø7 to Ø10, thus improving machining conditions.
· Compared to conventional tools, tool life improved five times.

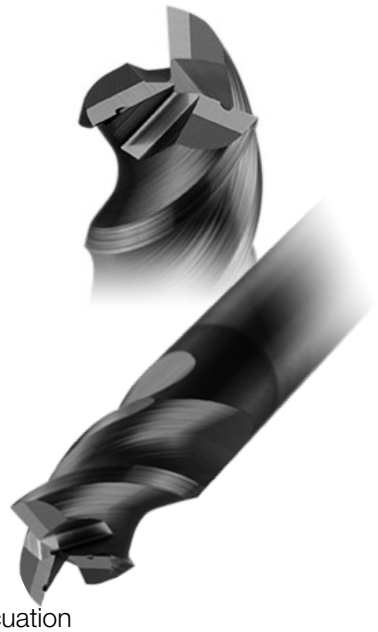
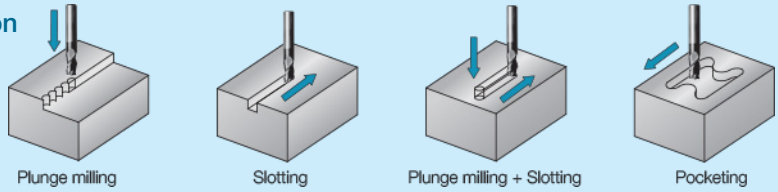
3ZFK

Triple Function

Plunge milling, slotting, and finishing with one end mill



●Application

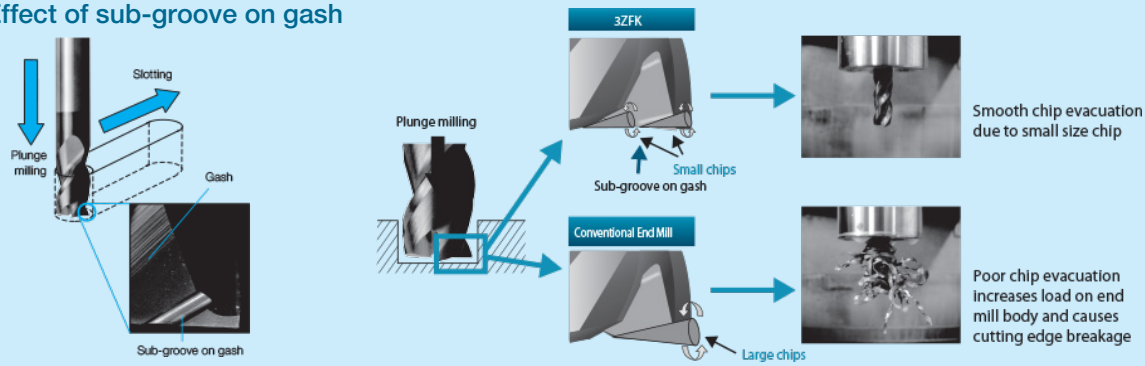


Triple Performance

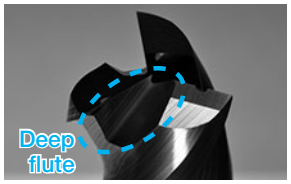
1. New design promotes high efficiency cutting

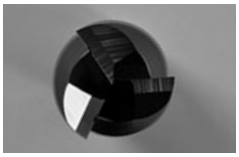
· Sub-groove on gash breaks chips during plunge milling resulting in smooth chip evacuation

●Effect of sub-groove on gash



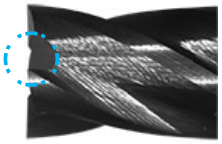
· Prevents **chip clogging** due to deep flute and gash design.





Bottom surface of 3ZFK cutting edge

3ZFK

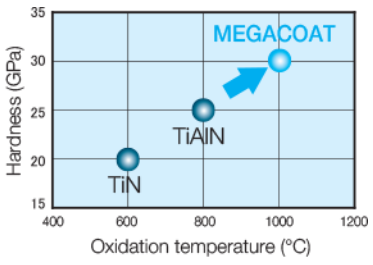


Conventional Endmill

2. Longer tool life due to MEGACOAT

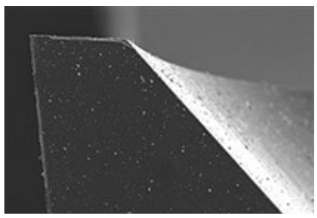
· Excellent wear resistance and heat-resistance

MEGACOAT (New PVD coat)



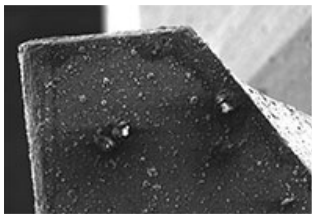
3. Better surface finish due to sharp cutting edge quality

· Smooth and sharp to the tip of the cutting edge
· Controls burr formation. Better surface roughness



MEGACOAT

Smooth and sharp to the tip of the cutting edge
Longer tool life and improved surface finish.



Competitor Coating A

Rough coating surface and round blunt cutting edge

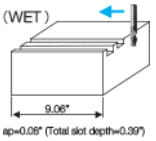
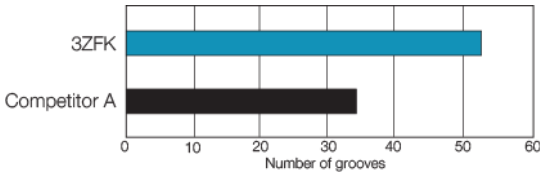
Case Studies

●Slotting of Titanium Alloy

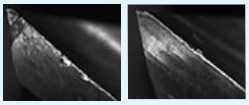
Outside Dia.	Ø10
Workpiece Material	Ti-6Al-4V
Spindle Revolution	3ZFK:n=1700min^{-1}
	Competitor A: n=1300min^{-1}
Feed Rate	Vf=18.1 ipm
Depth of Cut	ap×ae=0.08"×0.39"

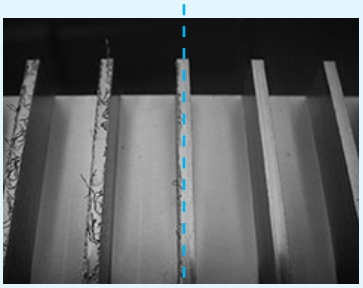




- Better surface finish and longer tool life with 3ZFK.
- Compared to competitor's coated products, the 3ZFK has a 1.4 times longer tool life.
- 3ZFK prevents burr formation due to sharp cutting edge.

◆Cutting edge after 35 passes





Competitor A	3ZFK	Competitor A	3ZFK

Chipbreaker

Recommended Cutting Conditions M4

JT Chipbreaker (General Purpose)

JS Chipbreaker (Low Cutting Force)

Machining cutting reduced by 20%

JA Chipbreaker (For Alminum)

■ **When using inserts with corner radius R0.0630" or larger, additional modifications of the cutter body will be necessary. See the chart below for the recommended modifications. (Additional grind off is not necessary when corner-R is 0.0472" or less.)**

Insert Corner-R(rε)	Additional modifications of the cutter body corner
0.0630	R0.0394
0.0787	R0.0394
0.0945	R0.0472

* Rounded shape is recommended when modifying the cutter corner. When chamfering cutter corner to modify, please make sure not to cut away too much.

- Machining with extended overhang length is not recommended for Ø0.315" and Ø0.394".
- The cutting performance chart shows the applicable range of JT Chipbreaker (PR830) with standard flute-number type.
  For Multi-Edge type, use with 70% or less of ap.

Cutting conditions of JS Chipbreaker

① For MECX0375~MECX0500 / MECX08~MECX12
Decrease the feed rate by 25% according to cutting capability list.

② For MECX 0625 / MECX16 and over
Decrease the feed rate and ap by 30% according to cutting application chart

Warning Please observe below precautions fully. Failure to observe the precautions may cause serious damage to human body.

Warning about Max. Revolution indicated on main body

1. When running the end mill and the face mill at revolutions exceeding the maximum revolution limit, the inserts or toolholder may be damaged due to the centrifugal force.
2. For actual practical revolution, please set within recommended cutting condition.
3. When using at a higher revolution (over 10,000RPM), refer to the table to adjust the balance of MECX and suitable arbor.

Max. Revolution (RPM)	Balance quality grade G ISO 1940-1 / 8821 (JIS B0905)
~20,000	G16.0
~30,000	G6.3
30,000~	G2.5

About wrench specifications

Wrenches and clamp screws are “Torx Plus”.

1) Ref. to Fig. 2 for “Torx Plus” Wrench. (Blue grip)

2) Ref. to Fig. 3 for “Torx” Wrench. (Black grip)

A “Torx Plus” Wrench and a “Torx” Wrench have different top shapes. Please use a “Torx Plus” Wrench.

* If a “Torx” Wrench is used to tighten, the screw head might become damaged and then the screw cannot be removed.

Mounting the Insert

1. Be sure to remove dust and chips from the insert mounting pocket.
2. Apply anti-seize compound on portion of taper and thread of clamp screw.
   ① Attach the screw (magnetic head) to the front end of the wrench.
   ② While lightly pressing the insert against the pocket walls,
   put the screw into the hole of the insert and tighten. (Ref. to Fig. 1.)
   Align M3 screw slightly inclined.
   (Ref. to Fig. 2.) surface of the insert.

3. When tightening the screw, make sure that the wrench is parallel to the screw.
   For recommended torque, Ref. to M9
4. After tightening the screw, make sure that there is no clearance between the insert seat surface and the pocket floor of the holder or between the insert side surfaces and the pocket walls of the holder.
   If there is any clearance, remove the insert and mount it again according to the above steps.

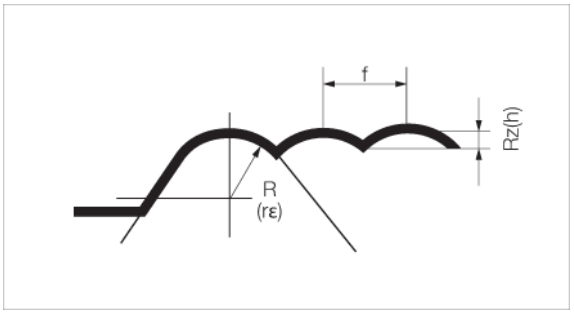
Theoretical (Geometrical) Surface Roughness

Theoretical Surface Roughness for Turning indicates the minimum roughness value from the cutting conditions and it is shown by the formula as follows:

$$Rz(h)=\frac{f^2}{8R(r\varepsilon)}x10^3$$

Rz(h) : Theoretical Surface Roughness [μm]
f : Feed Rate [mm/rev]
R (rε) : Corner Radius of Insert [mm]



How to Obtain Surface Roughness Values

Type	Symbol	How to Obtain	Explanation
Max. Height Roughness	Rz	Ry is a mean value in micron meter obtained from the distance of the highest peaks and the lowest valleys within the range of sampled reference length (l) in the direction of the center line of the roughness curve. Note) When calculating Rz, extraordinarily high or low threads are considered as damages and excluded from the calculation, and only standard lengths are used. Rz=Rp+Rv	Ten Points Mean Roughness	RzJIS	Rz is a mean value in micron meter obtained from the distance of 5 highest peaks (Yp) and the 5 lowest valleys (Yv) measured from the center line of the roughness curve within the range of sampled reference length "l ". $RzJIS=\frac{(Yp1+Yp2+Yp3+Yp4+Yp5)+(Yv1+Yv2+Yv3+Yv4+Yv5)}{5}$	Yp1,Yp2,Yp3,Yp4,Yp5 : Distance from the mean line to highest 5 peaks in the range of sampled reference length "l " Yv1,Yv2,Yv3,Yv4,Yv5 : Distance from the mean line to the lowest 5 valleys in the range of sampled reference length "l " Arithmetical Mean Roughness	Ra	Ra is obtained from the following formula in micron meter, the roughness curve is expressed by y=f(x), the X-axis is in the direction of the center line and the Y-axis is the vertical magnification of the roughness curve in the range of sampled reference length "l ". $Ra=\frac{1}{\ell}\int_0^{\ell}\{f(x)\}dx$	
Relationship with Triangle Symbol

Arithmetical Mean Roughness Ra(μm)	Max. Height Roughness Rz(μm)	Ten Points Mean Roughness RzJIS(μm)	※(Relationship with Triangle)
0.025	0.1	0.1	▽▽▽▽
0.050	0.2	0.2	
0.100	0.4	0.4	
0.200	0.8	0.8	
0.400	1.6	1.6	▽▽▽
0.800	3.2	3.2	
1.600	6.3	6.3	
3.200	12.5	12.5	▽▽
6.300	25.0	25.0	
12.500	50.0	50.0	▽
25.000	100.0	100.0	

※ Finishing symbol (Triangle ▽ and wave ~) was removed from JIS standard in the 1994 Revision.

- How to Indicate
  ① When Ra is 1.6μm→1.6μmRa
  ② When Rz is 6.3μm→6.3μmRz
  ③ When RzJIS is 6.3μm→6.3μmRzJIS

Indication in JIS Standard

Example of Ra Indication		Example of Ry, (Rz) Indication	
① When indicating the upper limit only (when upper limit is 6.3 mRa)		① When indicating upper limit only Indicate surface roughness following the parameter symbol.	
② When indicating both lower and upper limit (when upper limit is 6.3 mRa, lower limit is 1.6 mRa)		② When indicating both lower and upper limit Indicate surface roughness as (upper limit ~ lower limit) following the parameter symbol.	
Note: The indications of Ra and Rz are different.

Caution-Symbols for Surface Roughness

The above information is based on JIS B 0601-2001. However, some symbols were revised as shown in the right table in accordance with ISO Standard from JIS B 0601-2001 version. Ten Points Mean Roughness (Rz) was eliminated from 2001 version but it still remains as RzJIS reference, since it was popular in Japan.

Type	Symbol of JIS B 0601-1994		Symbol of JIS B 0601-2001
Max. Height Roughness	Ry	→	Rz
Ten Points Mean Roughness	Rz	→	(RzJIS)
Arithmetical Mean Roughness	Ra	→	Ra

- Extracted from JIS Handbook "Iron & Steel" (SAE J 417)

Note 1) 1MPa = 1N/mm²

2) Value in ( ) is not in practical use, but reference only

Metal

Class		Name of JIS Standard	Symbol
Structural Steel		Rolled Steel for Welded Structure	SM
		Re-Rolled Steel	SRB
		Rolled Steel for General Structure	SS
		Light Gauge Steel for General Structure	SSC
		Hot-Rolled Steel Plate, Sheet and Strip for Automobile Structural Use	SAPH
Steel Sheet		Cold-Rolled Steel Plate, Sheet and Strip	SPC
		Hot-Rolled Soft Steel Plate, Sheet and Strip	SPH
Steel Pipe		Carbon Steel Pipe for Ordinary Piping	SGP
		Carbon Steel Pipe for Boiler / Heat Exchanger	STB
		Seamless Steel Pipe for High Pressure Gas Cylinder	STH
		Carbon Steel Pipe for General Structural Use	STK
		Carbon Steel Pipe for Machine Structural Use	STKM
		Alloy Steel Pipe for Structural Use	STKS
		Stainless Steel Pipe for Machine Structural Use	SUS-TK
		Steel Square Pipe for General Structural Use	STKR
		Alloy Steel Pipe for Ordinary Piping	STPA
		Carbon Steel Pipe for Pressure Service	STPG
		Carbon Steel Pipe for High-Temperature Service	STPT
		Carbon Steel Pipe for High-Pressure Service	STS
		Stainless Steel Pipe for Ordinary Piping	SUS-TP
Steel for Machine Structural Use		Carbon Steel for Machine Structural Use	SxxC, SxxCK
		Aluminium Chromium Molybdenum Steel	SACM
		Chromium Molybdenum Steel	SCM
		Chromium Steel	SCr
		Nickel Chromium Steel	SNC
		Nickel Chromium Molybdenum Steel	SNCM
		Manganese Steel and Manganese Chromium Steel for Machine Structural Use	SMn, SMnC
Special Steel	Tool Steel	Carbon Tool Steel	SK
		Hollow Drill Steel	SKC
		Alloy Tool Steel	SKS, SKD, SKT
		High Speed Tool Steel	SKH
	Special Steel	Free Cutting Carbon Steel	SUM
		High Carbon Chromium Bearing Steel	SUJ
		Spring Steel	SUP
	Stainless Steel	Stainless Steel Bar	SUS-B
		Hot-Rolled Stainless Steel Plate, Sheet and Strip	SUS-HP, SUS-HS
		Cold-Rolled Stainless Steel Plate, Sheet and Strip	SUS-CP, SUS-CS
	Heat Resistant Steel	Heat-Resisting Steel Bar	SUH-B, SUH-CB
		Heat-Resisting Steel Plate and Sheet	SUH-HP, SUH-CP
	Super Alloy	Corrosion-Resisting and Heat-Resisting Superalloy Bar	NCF-B
		Corrosion-Resisting and Heat-Resisting Superalloy Plate and Sheet	NCF-P
Forged Steel		Carbon Steel Forging	SF
		Chromium Molybdenum Steel Forging	SFCM
		Nickel Chromium Molybdenum Steel Forging	SFNCM
Cast Iron		Gray Cast Iron	FC
		Spheroidal Graphite Cast Iron	FCD
		Blackheart Malleable Cast Iron	FCMB
		Whiteheart Malleable Cast Iron	FCMW
		Pearlitic Malleable Cast Iron	FCMP
Cast Steel		Carbon Cast Steel	SC
		High Tensile Strength Carbon Cast Steel & Low Alloy Cast Steel	SCC
		Stainless Cast Steel	SCS
		Heat-Resisting Cast Steel	SCH
		High Manganese Cast Steel	SCMnH
		Cast Steel for High Temperature and High Pressure Service	SCPH

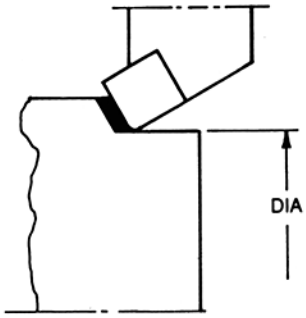
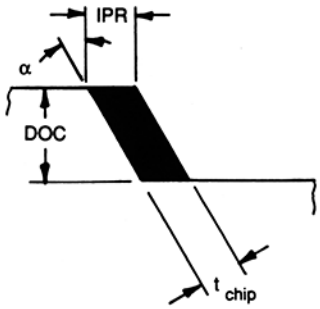
Turning





Surface Speed per Minute

$SFM = 0.262 \times DIA \times RPM$

Revolutions per Minute

$$RPM = \frac{3.820 \times SFM}{DIA}$$

Feedrate (inches/minute)

$IPM = IPR \times RPM$

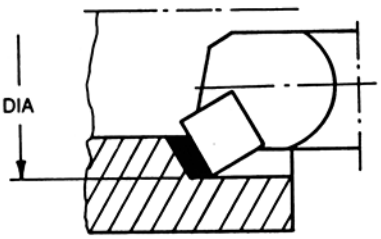
Chip Thinning for Non-Round Inserts (inches/revolution)

$$\text{Programmed IPR} = \frac{t_{chip\ Max}}{\cos 1}$$

Chip Thinning for Round Inserts (inches/revolution)

$$\text{Programmed IPR} = \frac{t_{chip\ Max}}{\sqrt{\frac{4ap}{ic} \cdot \left(\frac{2ap}{ic}\right)^2}}$$

Boring



Metal Removal Rate

$Q = 12 \times DOC \times IPR \times SFM$ (in^3/minute)

Horsepower Required at the Spindle

$HPS = Q \times UHP$

Horsepower Required at the Motor

$$HPM = \frac{HPS}{EFF}$$

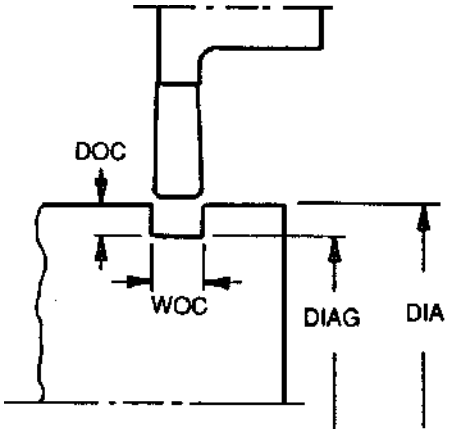
Time in Cut (seconds)

$$T = \frac{15.7 \times DIA \times LOC}{SFM \times IPR}$$

or

$$T = \frac{60 \times LOC}{IPM}$$

External Grooving



Surface Speed per Minute

$SFM = 0.262 \times DIA \times RPM$

Revolutions per Minute

$$RPM = \frac{3.820 \times SFM}{DIA}$$

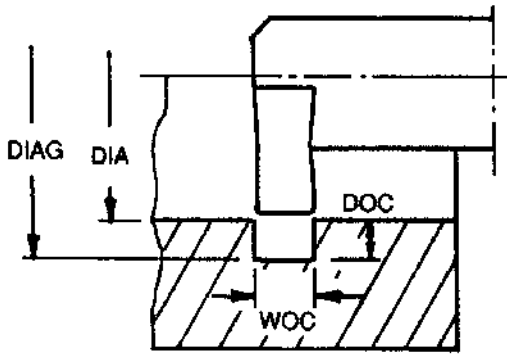
Feedrate (inches/minute)

$IPM = IPR \times RPM$

Feedrate (inches/revolution)

$IPR = t_{chip}$

Internal Grooving



Metal Removal Rate

$Q = 12 \times WOC \times IPR \times SFM$ (cu.in/minute)

Horsepower Required at the Spindle

$HPS = Q \times UHP$

Horsepower Required at the Motor

$$HPM = \frac{HPS}{EFF}$$

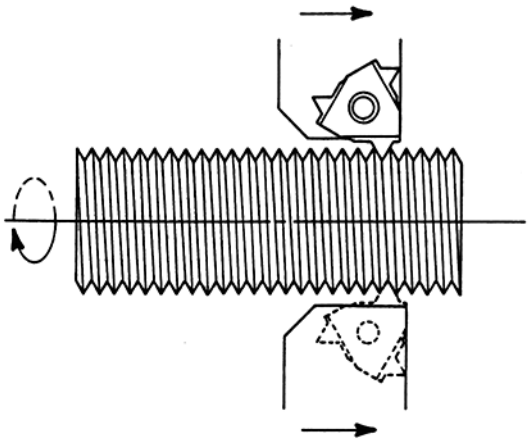
Time in Cut (seconds)

$$T = \frac{7.85 \times DOC \times (DIA + DIAG)}{SFM \times IPR}$$

or

$$T = \frac{60 \times LOC}{IPM}$$

External Threading



Surface Speed per Minute

$$SFM = 0.262 \times DIA \times RPM$$

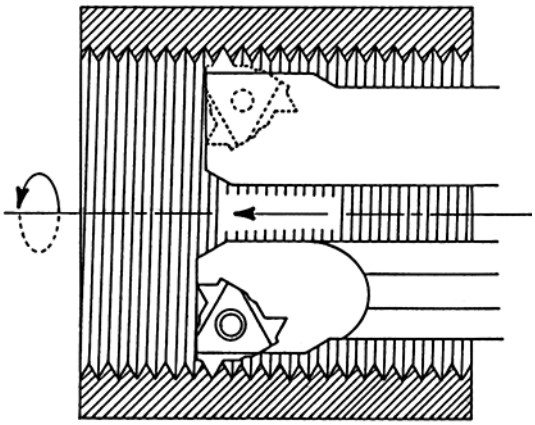
Revolutions per Minute

$$RPM = \frac{3.820 \times SFM}{DIA}$$

Feedrate (inches/minute)

$$IPM = IPR \times RPM$$

Internal Threading



Time in Cut (seconds)

$$T = \frac{60 \times LOC \times NO.\ OF\ PASSES}{IPR \times RPM}$$

Feedrate

Standard Threads

$$IPR = \frac{1}{TPI}$$

Metric Threads

$$IPR = \frac{P_{mm}}{25.4}$$

Definition of Terms

DIA = Diameter of the Workpiece (Inches)

DOC = Depth of Cut (Inches)

EFF = Machine Efficiency

f = Feedrate (See IPM and IPR)

HPM = Horsepower Required at the Motor

HPS = Horsepower Required at the Spindle

IPM = Feedrate (Inches per Minute)

IPR = Feedrate (Inches per Revolution)

IC = Insert inscribed circle (inches)

LOC = Length of Cut (Inches)

Q = Metal Removal Rate (Cubic Inches per Minute)

RPM = Revolutions per Minute

SFM = Surface Speed (Feet per Minute)

T = Time (in Seconds)

$t_{chip\ Max}$ = Maximum Recommended Chip Thickness (Inches)

UHP = Unit Horsepower Factor

1 = Lead Angle

Turning

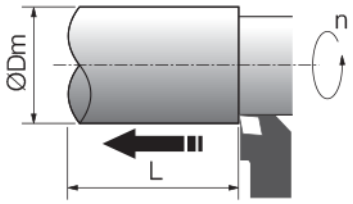
Cutting Speed

$$Vc = \frac{\pi \times Dm \times n}{1000}$$

Vc : Cutting Speed [m/min]

Dm : Workpiece Diameter [mm]

n : Spindle Revolution [min^{-1}]



Power Requirement

$$Pc = \frac{Ks \times Vc \times ap \times f}{6120 \times \eta}$$

$$P_{HP} = \frac{Ks \times Vc \times ap \times f}{4500 \times \eta}$$

Pc : Power Requirement [kW]

P_{HP} : Power Requirement (Horse Power) [HP]

Vc : Cutting Speed [m/min]

ap : Depth Of Cut [mm]

f : Feed Rate [mm/rev]

Ks : Specific Cutting Resistance [kgf/mm^{-2}]

η : Mechanical Efficiency (0.7 ~ 0.8)

Ks Figure	
Low Carbon Steel	190
Medium Carbon Steel	210
High Carbon Steel	240
Low Alloy Steel	190
High Alloy Steel	245
Cast Iron	93
Malleable Cast Iron	120
Bronze, Brass	70

Surface Roughness

$$Rz=h = \frac{f2}{8 \times R(r\varepsilon)} \times 1000$$

Rz=h : Theoretical Surface Roughness [µm]

f : Feed Rate [mm/rev]

R(rε) : Corner Radius of Insert [mm]

Chip Removal Volume

$$Q = Vc \times ap \times f$$

Q : Chip Removal Volume [cm^3/min]

Vc : Cutting Speed [m/min]

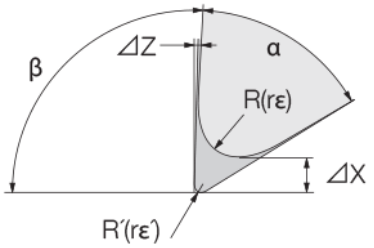
ap : Depth Of Cut [mm]

f : Feed Rate [mm/rev]

Edge Position Compensation

$$\Delta X = (R\text{-}R') \times \left\{ \frac{\cos(\frac{\alpha}{2} + (\beta - 90°))}{\sin\frac{\alpha}{2}} - 1 \right\}$$

$$\Delta Z = (R\text{-}R') \times \left\{ \frac{\sin(\frac{\alpha}{2} + (\beta - 90°))}{\sin\frac{\alpha}{2}} - 1 \right\}$$



ΔX : X-axis Direction Edge Position Compensation [mm]

ΔZ : Z-axis Direction Edge Position Compensation [mm]

R : Corner-R before Change [mm]

R' : Corner-R before Change [mm]

α : Insert Corner Angle [°]

β : Toolholder's Cutting Edge Angle [°]

Toolholder Type	Insert Corner Angle α	Cutting Edge Angle β	ΔX	ΔZ
PCLN	80°	95°	0.100 x (R-R')	0.100 x (R-R')
PTGN	60°	91°	0.714 x (R-R')	0.030 x (R-R')
PDJN	55°	93°	0.866 x (R-R')	0.099 x (R-R')
PDHN	55°	107.5°	0.531 x (R-R')	0.531 x (R-R')
PVLN	35°	95°	2.072 x (R-R')	0.273 x (R-R')
PVPN	35°	117.5°	1.351 x (R-R')	1.351 x (R-R')
PSBN	90°	75°	0.225 x (R-R')	-0.293 x (R-R')

Example: Compensation when changing corner-R from 0.80 to 0.40, using PCLN type holder,

ΔX= 0.100 x (0.80 - 0.40) = 0.04 (mm)

ΔZ= 0.100 x (0.80 - 0.40) = 0.04 (mm)

Turning (Cutting Time)

Cutting Time (External Turning Case 1: 1 Pass machining)

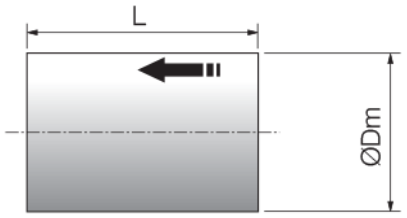
- At Constant Revoluation

$$T = \frac{60 \times L}{f \times n}$$

- At Constant Cutting Speed

$$T = \frac{60 \times \pi \times L \times Dm}{1000 \times f \times Vc}$$

T : Cutting Time [second]
L : Cutting Length [mm]
f : Feed Rate [mm/rev]
n : Spindle Revolution [min^{-1}]
Dm : Workpiece Diameter [mm]
Vc : Cutting Speed [m/min]



Cutting Time (External Turning Case 2: Multi-Pass machining)

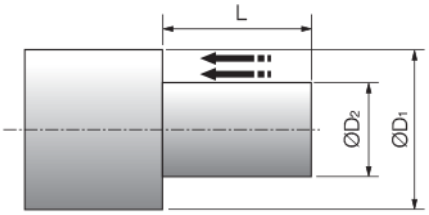
- At Constant Revoluation

$$T = \frac{60 \times L}{f \times n} \times N$$

- At Constant Cutting Speed

$$T = \frac{60 \times \pi \times L \times (D_1 + D_2)}{2 \times 1000 \times f \times Vc} \times N$$

T : Cutting Time [second]
L : Cutting Length [mm]
ap : Depth Of Cut per Pass [mm]
f : Feed Rate [mm/rev]
n : Spindle Revolution [min^{-1}]
D_1 : Max. Diameter of Workpiece [mm]
D_2 : Min. Diameter of Workpiece [mm]
Vc : Cutting Speed [m/min]
N : Number of Passes = $(D_1 - D_2)/ap/2$ (if it is indivisible, obtain integer by rounding up one place of decimals.)



Cutting Time (Facing)

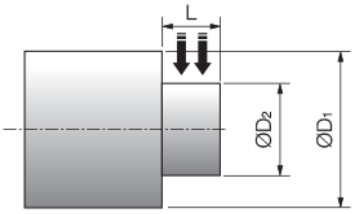
- At Constant Revoluation

$$T = \frac{60 \times (D_1 - D_2)}{2 \times f \times n} \times N$$

- At Constant Cutting Speed

$$T_1 = \frac{60 \times \pi \times (D_1 + D_2 \times D_1 - D_2)}{4000 \times f \times Vc} \times N$$

T : Cutting Time [second]
T_1 : Machining Time before reaching Max. Spindle Revolution [second]
L : Cutting Length [mm]
ap : Depth Of Cut per Pass [mm]
f : Feed Rate [mm/rev]
n : Spindle Revolution [min^{-1}]
D_1 : Max. Diameter of Workpiece [mm]
D_2 : Min. Diameter of Workpiece [mm]
Vc : Cutting Speed [m/min]
N : Number of Passes = $(D_1 - D_2)/ap/2$ (if it is indivisible, obtain integer by rounding up one place of decimals.)



Cutting Time (Grooving)

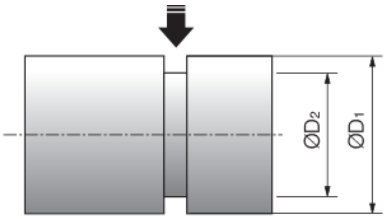
- At Constant Revoluation

$$T = \frac{60 \times (D_1 - D_2)}{2 \times f \times n} \times N$$

- At Constant Cutting Speed

$$T_1 = \frac{60 \times \pi \times (D_1 + D_2) \times (D_1 - D_2)}{4000 \times f \times Vc} \times N$$

T : Cutting Time [second]
T_1 : Machining Time before reaching Max. Spindle Revolution [second]
L : Cutting Length [mm]
f : Feed Rate [mm/rev]
n : Spindle Revolution [min^{-1}]
D_1 : Max. Diameter of Workpiece [mm]
D_2 : Min. Diameter of Workpiece [mm]
Vc : Cutting Speed [m/min]



Cutting Time (Cut-Off)

- At Constant Revoluation

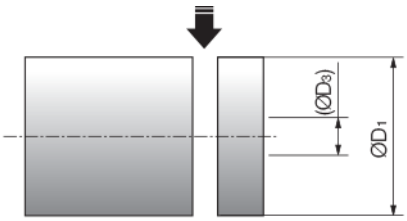
$$T = \frac{60 \times D_1}{2 \times f \times n}$$

- At Constant Cutting Speed

$$T_1 = \frac{60 \times \pi \times (D_1 + D_3) \times (D_1 - D_3)}{4000 \times f \times Vc}$$

$$T_3 = T_{1+} \frac{60 \times D_3}{2 \times f \times N_{max}}$$

T : Cutting Time [second]
T_1 : Machining Time before reaching Max. Spindle Revolution [second]
T_3 : Machining Time when reaching Max. Spindle Revolution [second]
f : Feed Rate [mm/rev]
n : Spindle Revolution [min^{-1}]
n_{max} : Max. Spindle Revolution [min^{-1}]
D_1 : Max. Diameter of Workpiece [mm]
D_3 : Diameter when reaching Max. Spindle Revolution [mm]
Vc : Cutting Speed [m/min]



Milling (Inch)

Surface Speed per Minute

$$SFM = .262 \times DIA \times RPM$$

Revolutions per Minute

$$RPM = \frac{3.82 \times SFM}{DIA}$$

Feedrate (inches/minute)

$$IPM = IPT \times N \times RPM$$

Feedrate (inches/tooth)

$$\text{Programmed } IPT = \frac{t_{chip\ Max}}{\cos\alpha}$$

Radial Chip Thinning for 90° Cutters

$$f_1 = \frac{1/2\left(\frac{Dia}{Ae}\right)}{\sqrt{\left(\frac{Dia}{Ae}\right)} - 1}$$

Table Feed with f_1 Compensation (inches/minute)
$= IPT \times N \times RPM \times f_1$

Metal Removal Rate

$$Q = WOC \times DOC \times IPM \text{ (in/min)}$$

Horsepower Required at the Spindle

$$HPS = Q \times UHP$$

Horsepower Required at the Motor

$$HPM = \frac{HPS}{EFF}$$

Time in Cut (seconds)

$$T = \frac{15.7 \times DIA \times LOC}{SFM \times IPR \times N}$$

or

$$T = \frac{60 \times LOC}{IPM}$$

Definition of Terms

DIA = Cutter Diameter (Inches)
ap= Axial depth of Cut (Inches)
EFF = Machine Efficiency
f = Feedrate (See IPM, IPR and IPT)
HPM = Horsepower Required at the Motor (HP)
HPS = Horsepower Required at the Spindle (HP)
IPM = Feedrate (Inches per Minute)
IPR = Feedrate (Inches per Revolution)
IPT = Feedrate (Inches per Tooth)
f_1 = Cutter Compensation Factor
WOC = Width of Cut (Inches)
LOC = Length of Cut (Inches)
N = Number of Effective Teeth in Cutter
Q = Metal Removal Rate (Cubic Inches per Minute)
RPM = Revolutions per Minute
SFM = Surface Speed (Feet per Minute)
T = Time (in Seconds)
$t_{chip\ Max}$ = Maximum Recommended Chip Thickness (Inches)
UHP = Unit Horsepower Factor
α = Lead Angle

Milling (Metric)

Cutting Speed

$$Vc = \frac{\pi \times Ds \times n}{1000}$$

Vc : Cutting Speed [m/min]
Ds : End Mill Diameter [mm]
n : Spindle Revolution [min^{-1}]

End Mill Diameter
(Diameter at Edge Point)

Power Requirement

$$fz = \frac{Vf}{Z \times n}$$

fz : Feed Per Tooth [mm/t]
Vf : Table Feed [mm/min]
Z : Number of Inserts
n : Spindle Revolution [min^{-1}]
